10.DUTY CYCLE

Test Method:	ANSI C63.10:2013
--------------	------------------

10.1 APPLIED PROCEDURES / LIMIT

Measurements of duty cycle and transmission duration shall be performed using one of the following techniques:

- a) A diode detector and an oscilloscope that together have a sufficiently short response time to permit accurate measurements of the ON and OFF times of the transmitted signal.
- b) The zero-span mode on a spectrum analyzer or EMI receiver if the response time and spacing between bins on the sweep are sufficient to permit accurate measurements of the ON and OFF times of the transmitted signal:
 - 1) Set the center frequency of the instrument to the center frequency of the transmission.
 - 2) Set $RBW \geq OBW$ if possible; otherwise, set RBW to the largest available value.
 - 3) Set $VBW \geq RBW$. Set detector = peak or average.
 - 4) The zero-span measurement method shall not be used unless both RBW and VBW are $> 50/T$ and the number of sweep points across duration T exceeds 100. (For example, if VBW and/or RBW are limited to 3 MHz, then the zero-span method of measuring the duty cycle shall not be used if $T \leq 16.7 \mu s$.)

10.2 DEVIATION FROM STANDARD

No deviation.

10.3 TEST SETUP

10.4 TEST RESULTS

Mode	Antenna	Frequency (MHz)	Duty Cycle (%)	Correction Factor (dB)
802.11b	SISO ANT A	2412	87.75	0.57
	SISO ANT B	2412	91.78	0.37
802.11g	SISO ANT A	2412	95.19	0.21
	SISO ANT B	2412	95.20	0.21
802.11n20	SISO ANT A	2412	95.06	0.22
	SISO ANT B	2412	95.06	0.22
	MIMO A+B	2412	98.07	0.08
802.11n40	SISO ANT A	2422	95.01	0.22
	SISO ANT B	2422	95.01	0.22
	MIMO A+B	2422	98.02	0.09
802.11ax20	SISO ANT A	2412	94.81	0.23
	SISO ANT B	2412	99.76	0.01

11. ANTENNA REQUIREMENT

Standard requirement:	FCC Part15 C Section 15.203 /247(c)
15.203 requirement: An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited. 15.247(c) (1)(i) requirement: (i) Systems operating in the 2400-2483.5 MHz band that is used exclusively for fixed. Point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6dBi. A transmitter can only be sold or operated with antennas with which it was approved.	
EUT Antenna:	
The antenna is FPC ANT A&B, the best case gain of the antenna is ANT A is 0.9dBi and ANT A is -0.1dBi, reference to the appendix II for details	

12. TEST SETUP PHOTO

Reference to the appendix I for details.

13. EUT CONSTRUCTIONAL DETAILS
