Confidentiality Request regarding application for certification of FCC ID: 2BNVO-LX1

Dear Examiner.

This letter respectfully requests that the Commission grant confidential treatment for specific exhibits submitted as part of our application, filed on our behalf by Waltek Services Testing Group.

The submission includes technical documentation such as block diagrams, schematics, component lists, U-NII device security statement and a detailed operational description of the device. These materials are essential for a complete evaluation of the product's performance and regulatory compliance. While we fully support the review process and are prepared to provide any additional information upon request, we respectfully emphasize that these materials contain proprietary information and are not intended for public disclosure.

The exhibits referenced above reveal the underlying mechanisms of our process, the disclosure of which would provide competitors with insight into the proprietary operation of our product. Such details are not reasonably discernible—even by sophisticated technical experts—through examination of the hardware alone. Accordingly, they meet the definition of trade secrets.

We therefore request, consistent with FCC Sections 0.457(d) and 0.459, that these exhibits be withheld from public inspection and maintained separately from the publicly accessible portions of our application.

We appreciate your consideration of this request and kindly ask that you advise us should you require further justification.

Kind Regards,

Joseph Turrisi
Product Manager
