

FCC 47 CFR MPE REPORT

HANSHOW PTE. LTD.

Electronic Shelf Label

Model Number: Nebular Ultra-154Q-NP

FCC ID: 2BPF3-NU1-154Q

Applicant:	HANSHOW PTE. LTD
Address:	138 ROBINSON ROAD #02-33 OXLEY TOWER
	SINGAPORE(068906)
Prepared By:	EST Technology Co., Ltd.
	Chilingxiang, Qishantou, Santun, Houjie, Dongguan, Guangdong, China
Tel: 86-769-83081888-808	

Report Number:	ESTE-R2605075
Date of Test:	Apr. 27, 2026 to May 11, 2026
Date of Report:	May 14, 2026

Maximum Permissible Exposure

1. Applicable Standards

Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess limit for maximum permissible exposure. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 & KDB 447498 D04 V01 this device has been defined as a mobile device whereby a distance of 0.2m normally can be maintained between the user and the device.

1.1. Limits for Maximum Permissible Exposure (MPE)

(a) Limits for Occupational/Controlled Exposure

Frequency Range (MHz)	Electric Field Strength (E) (V/m)	Magnetic Field Strength (H) (A/m)	Power Density (S) (mW/cm ²)	Averaging Times E ² , H ² or S (minutes)
0.3-3.0	614	1.63	(100)*	6
3.0-30	1842/f	4.89/f	(900/f)*	6
30-300	61.4	0.163	1.0	6
300-1500			F/300	6
1500-10000			5	6

(b) Limits for General Population / Uncontrolled Exposure

Frequency Range (MHz)	Electric Field Strength (E) (V/m)	Magnetic Field Strength (H) (A/m)	Power Density (S) (mW/cm ²)	Averaging Times E ² , H ² or S (minutes)
0.3-1.34	614	1.63	(100)*	30
1.34-30	824/f	2.19/f	(180/f)*	30
30-300	27.5	0.073	0.2	30
300-1500			F/1500	30
1500-10000			1.0	30

Note: f=frequency in MHz; *Plane-wave equivalent power density

1.2. MPE Calculation Method

$$E \text{ (V/m)} = \frac{\sqrt{30 \times P \times G}}{d} \quad \text{Power Density: } Pd \text{ (W/m}^2\text{)} = \frac{E^2}{377}$$

E = Electric Field (V/m)

P = Peak RF output Power (W)

G = EUT Antenna numeric gain (numeric)

d = Separation distance between radiator and human body (m)

The formula can be changed to

$$Pd = \frac{30 \times P \times G}{377 \times d^2}$$

From the peak EUT RF output power, the minimum mobile separation distance, $d=0.2\text{m}$, as well as the gain of the used antenna, the RF power density can be obtained

2. Conducted Power Result

Mode	Frequency (MHz)	Peak output power (dBm)	Peak output power (mW)
BLE 1M	2402	1.52	1.419
	2440	1.48	1.406
	2480	1.42	1.387
BLE 2M	2402	1.68	1.472
	2440	1.55	1.429
	2480	1.51	1.416

3. Calculated Result and Limit

Mode	Peak output power (dBm)	Target power (dBm)	MAX Target power (dBm)	Antenna gain		Power Density (S) (mW /cm²)	Limited of Power Density (S) (mW /cm²)	Test Result
				(dBi)	(Linear)			
2.4G Band								
BLE 1M	1.52	1±1	2	-1.1	0.776	0.00024	1	Complies
BLE 2M	1.68	1±1	2	-1.1	0.776	0.00024	1	Complies

For 2.4G SRD

Field strength =73.92dBuV/m@3m

$$P=\{10^{(73.92/20)} / 10^6 * 3\}^2 / 30 \} * 1000 \text{mW} = 0.0106 \text{mW}$$

$$P_d=2.1 \times 10^{-6} \text{mW/cm}^2 < 1 \text{mW/cm}^2$$

For NFC 13.56MHz

Field strength = 50.38dBuV/m@3m

$$P=\{ [10^{(50.38/20)} / 10^6 * 3\}^2 / 30 \} * 1000 \text{mW} = 0.00003274 \text{mW}$$

$$P_d=6.5134 \text{mW/cm}^2 < 13.27 \text{mW/cm}^2$$
