RE: Long-Term Confidentiality Request for Miniature Advanced Rangefinder System (MARS), FCC ID 2BQJI-MARS

To Whom It May Concern:

This letter serves as an official request for confidentiality under § 0.457(d) and § 0.459 of CFR 47. We request that the following documents required to be submitted with this application be permanently withheld from public review.

- **Internal Photos**

The Miniature Advanced Rangefinder System (MARS) is an ITAR controlled device as defined by the United States Munitions List (UMSL) XII(b)(3)(ii)(B). Given the MARS, specifically internal photos of the electronics are ITAR controlled, posting of the images online which would grant anyone free access to them, would be a direct export violation of the ITAR.

Based on KDB 726920 D01, Section II(3), the MARS system is a sealed system and the internal components, including electronics circuit boards, are not accessible to the users without the use of special tools. The electronics are contained within the rear of the MARS system, and the only ability to access them would be to remove the entire rear of the system and remove the internal housing that they are contained within.

As a result of these facts, Envision requests that internal photos of the MARS system remain confidential permanently as to not violate any ITAR restrictions placed on the MARS device.

Sincerely,

Michael Frappier
