H-501 at a Glance - Display Indication

** Display indication examples:

Signal strength / S/N ratio:	  1408  S/N	Clock time:	20:18
Shortwave meter band:	19 	"Timer A":	 06:30
Memory location:	P232  	"Timer B":	 15:30
Organizing memory:	P0C3	Charging time:	 03:20
		Audio track number:	203

Powering Your Device

This device can be powered by a 18650 3.7V rechargeable lithium (Li-ion) battery or by connecting a DC 5V/1A power adapter.

- 1) Battery powered: Push the battery compartment cover to the right as shown below. Install the battery following the indicated battery polarity and then place back the cover.

Note: **Please remove the batteries's plastic seal before usage.**

Although the device is powered by only one battery, it has a second compartment to hold a spare battery. Both compartments can be used to power the device. Use the [SELECT BATTERY] switch at the back of the device to select which battery to use for powering the device.

- 2) DC powered: When there is no battery inside the radio, connect a DC 5V/1A power adapter to the USB type-C "CHARGE" socket on the right side of the device.

Note: Connecting an external power supply causes interference when listening to radio frequencies. If experiencing reception difficulties, disconnect the DC power supply and use a battery instead.

Attention! If you use a power adapter, assure that is appropriately certified and meets the safety standards for an adapter in your region.

Charging the Battery

When the battery icon is displayed as "🔋", this indicates that battery power is about to run out. Please charge it in time. To charge the 18650 rechargeable lithium (Li-ion) battery, use the [SELECT BATTERY] switch at the back of the device to select which battery to charge. Connect a DC 5V/1A charger to the "CHARGE" socket on the right side of the device using a USB type-C charging cable. While charging, the charging time is shown and the charging indicator "Charge" flashes on the display. The charging indicator "Charge" stops flashing once charging is complete.

Note:

- To avoid electrical noise interference, do not to charge the battery and listen to the radio at the same time.
- If the device is not used for a prolonged period of time, it is advisable to charge the battery once every 3 months for about 4 hours. This may extend battery life.

Setting the Clock (24-hour format):

- 1) Turn the device off.
- 2) Press and hold [TIME] until the clock time starts flashing.
- 3) Use the numeric keys to enter the current time (hours + minutes is four digits). Alternatively, rotate the [TUNING] knob to adjust the hour, then rotate the [FINE TUNING] knob to adjust the minutes, followed by a quick press of the [TIME] button to confirm the setting.

Tip: With the device on, quick press [TIME] to display the current time. Quick press [TIME] again to return to the radio frequency or audio playback display.

Setting the FM Frequency Range

Set the frequency range to correspond with the country in which to use the radio.

- 1) Turn the device off.
- 2) Press and hold the [1] (FM SET) button, the display will show “64”, “76”, “87” or “88” to indicate the corresponding range: 64 ~ 108MHz, 76 ~ 108MHz, 87 ~ 108MHz or 87.5 ~ 108MHz.
- 3) Quick press the [1] button repeatedly to select an appropriate range.
- 4) Quick press [↵] (ENTER) to confirm, or wait for 2 seconds for the system to automatically confirm.

Setting the MW Tuning Step and AM (MW/LW/SW) Frequency Range

With the device off, press and hold the [3] (9/10kHz) button to set the tuning step and frequency range of MW that corresponds with the country in which to use the radio.

Display indicates “9”:

- MW tuning steps are set to 9 kHz.
- MW frequency range is 522 ~ 1620 kHz (for Europe, Africa, Asia, Oceania).
- LW frequency range is 100 ~ 519 kHz.
- SW frequency range is 1711 ~ 29999 kHz.

Display indicates “10”:

- MW tuning steps are set to 10 kHz.
- MW frequency range is 520 ~ 1710 kHz (for North and South America).
- LW frequency range is 100 ~ 519 kHz.
- SW frequency range is 1711 ~ 29999 kHz.

Enabling/Disabling Longwave (LW)

With the device off, press and hold the [2] (LW ON/OFF) button, the display shows “ON” (enabled) or “OFF” (disabled). To select the LW frequency band, power on the device and then quick press the [MW/LW] button twice.

USING THE DEVICE

Turning the device on/off: Quick press the red (POWER/SLEEP) button.

Volume control: Rotate the [VOLUME] knob upwards or downwards to select your desired volume level.

Note: Volume control on this device is disabled when feeding audio through the [LINE OUT] socket.

(1) LISTENING TO RADIO

VF (View Frequency) and VM (View Memory)

VF: VF mode is used when searching for new radio signals. Quick press the [VF/VM] button. When the frequency indicator flashes, the VF mode is activated.

VM: VM mode is used for recalling stations that have already been stored into the memory. Quick press the [VF/VM] button. When the station memory indicator in the top right corner of the display flashes, the VM mode is activated.

Note: When the memory contains no stored stations, it is not possible to access VM (View Memory) mode.

Using the Radio's Antennas

FM / Shortwave (SW):

When listening to FM or shortwave radio, extend the antenna and adjust its length and direction in order to get the optimum reception.

Medium Wave (MW) / Long Wave (LW):

This radio uses an internal ferrite bar antenna to receive medium wave and long wave broadcasts, the quality of which can be enhanced by changing the device's position and direction.

TUNING INTO STATIONS

Turn on the device, then quick press the [FM], [MW/LW], [SW +] or [SW -] button to select your desired frequency band. You can tune into your favorite stations using any of the following tuning methods.

Manual Tuning

In VF mode, rotate the [TUNING] and [FINE TUNING] knobs to search for your desired stations.

Auto Scan

In VF mode, press and hold the [VF/VM] button. The device will automatically scan the entire frequency band for available stations. When a station is found it will stay there for about 5 seconds before continuing the search. To stop the auto scan feature, quick press the [VF/VM] button or gently rotate the [TUNING] knob.

Direct Keypad Entry

In VF mode, quick press the numeric keys [0 - 9] (followed by [←]) to directly enter a station frequency.

Notes:

- For FM band, ignore the decimal point when inputting frequency numbers. For example: enter 8, 9, 3 for FM 89.3 MHz.
- If the entered frequency is not within the covering range, the error " Err " symbol will be displayed

SW / SSB Meter Band Selection

When tuned into a shortwave or SSB frequency, quick press [SW +] or [SW -] to change the SW or SSB meter band:

SW meter bands: 120m / 90m / 75m / 60m / 49m / 41m / 31m / 25m / 22m / 19m / 16m / 15m / 13m / 11m

SSB meter bands: 160m / 80m / 60m / 40m / 30m / 24m / 20m / 17m / 15m / 12m / 10m

WORKING WITH STATION MEMORIES

This device can store 3150 stations (presets), separated over 25 memory pages (P0 - P24).

- 1) Page 0, indicated as "P0" on the display, can store 750 stations: 100 stations each for FM, MW, LW, SSB and SYNC, and 250 stations for SW.
- 2) Pages 1-24 ("P1", "P2", etc.) can store 100 stations each for FM, MW, LW and SW.

	Page 0 (P0)	Page 1-24
FM	100 stations	Each memory page can store 100 stations.
MW	100 stations	
LW	100 stations	
SW	250 stations	
SSB	100 stations	X
SYNC	100 stations	X

Storing Stations Manually

- 1) Tune into a radio station.
- 2) Quick press the memory [MEM.] button, "PRESET" flashes and indicates the first available storage location in the selected memory page. If desired, change the page and/or preset location by using the [PAGE -] or [PAGE +] button and/or the [TUNING] knob.
- 3) Quick press the [MEM.] button again to confirm or wait for about 3 seconds to automatically store the station into memory.

Notes:

- SSB and SYNC stations are only available for storage in Page 0.
- Stored SSB and SYNC station details include USB/LSB and frequency information, but no frequency details smaller than 1 kHz.

Auto Tuning Storage (ATS)

Automatically tune into and store FM, LW, MW and SW stations.

Operation for FM and MW/LW:

- 1) Use the [PAGE -] or [PAGE +] button to select an (empty) memory page.
- 2) Quick press [FM] or [MW/LW] to select the frequency band.
- 3) Press and hold the [FM] or [MW/LW] button until "PRESET" flashes and the frequency starts running.
- 4) When the frequency stops running, it means the ATS operation has been completed. Rotate the [TUNING] knob to view all the stored stations.

Operation for SW:

- 1) Use the [PAGE -] or [PAGE +] button to select an (empty) memory page.
- 2) Quick press [SW+] or [SW-] to select the SW frequency band.
- 3) There are two ATS modes for SW:

Mode A: Press and hold the [SW+] button to initiate ATS within the selected meter band.

Mode B: Press and hold the [SW-] button to initiate ATS for stations within all meter bands.

Tips:

- ATS (except in SW mode B) replaces previously stored radio stations within a memory page. To prevent this from happening, please select an empty memory page before initiating ATS.
- ATS results for LW, MW and SW strongly depend on radio wave propagation conditions, the receiving environment and other factors. If the results are poor, try to initiate ATS at a different location and/or time, or tune into stations manually and then store them.

Storing Stations During Auto Scan

To avoid any unwanted stations that might be stored during Auto Tuning Storage (ATS), store stations manually during "Auto Scan" (see also page 10).

- 1) Use the [PAGE -] or [PAGE +] button to select a memory page.
- 2) Quick press the [VF/VM] button.
- 3) Quick press the [FM], [MW/LW] or [SW] button to select the frequency band.
- 4) Press and hold the [VF/VM] button. The device starts to scan the frequency band for available stations.
- 5) When a station of your liking is found, quick press the memory [MEM.] button to store it; the device continues to scan for the next available station.
- 6) To stop the auto scan feature, quick press the [VF/VM] button or gently rotate the [TUNING] knob.

Auto Sorting Memory

This feature can automatically organize all stations that have been stored into the memory. Turn the device off, and then press and hold the [] (0) button until the memory page number on the display starts running. Duplicate stations are deleted and the remaining stations are organized:

- In memory page P0, stations within a frequency band are sorted in sequence from low to high frequency.
- In memory pages P1-24, stations are sorted in sequence of frequency (from low to high), and in sequence of band: FM, SW, MW, LW.

LISTENING TO STORED STATIONS

When recalling stored stations or initiating a memory page scan, Page 0 (P0) only shows the stations of the frequency band (FM/LW/MW/SW) or mode (SYNC/SSB) that was selected when entering the memory (VM). In Page 1-24 it is not necessary to preselect a frequency band or mode, the device will show stored stations from all bands within the selected memory page.

Recalling Stored Stations

Operation for memory Page 0:

- 1) Use the [PAGE -] or [PAGE +] button to select memory page P0.
- 2) Select a frequency band (FM, LW, MW, SW) or mode (SYNC, SSB).
- 3) Quick press the [VF/VM] button to enter the VM mode (see also page 8).
- 4) Rotate the [TUNING] knob with some vigor to browse through the station list, or use the numeric keys to directly enter the preset station number.

Operation for memory Page 1-24:

- 1) Use the [PAGE -] or [PAGE +] button to select a memory page.
- 2) Rotate the [TUNING] knob with some vigor to browse through the selected memory page, or use the numeric keys to directly enter the preset station number.

Memory Page Scan

This device can auto scan all stored stations within a memory page, staying on each station for about 5 seconds.

- 1) Use the [PAGE -] or [PAGE +] button to select a memory page.
- 2) Press and hold the [VF/VM] button until "PRESET" flashes in the upper right corner of the display. The device starts to scan all stored stations within the selected memory page.
- 3) To stop scanning, quick press the [VF/VM] button or gently rotate the [TUNING] knob.

DELETING STORED STATIONS

Deleting a Single Station

- 1) Enter the memory (VM) mode and select the station that you wish to delete.
- 2) Press and hold the [DEL.] button until “dEL” and “PRESET” flash on the display.
- 3) Quick press the [DEL.] button to delete the unwanted station.

Note: If the [DEL.] button is not pressed for confirmation within 3 seconds, the delete function is exited automatically.

Deleting Stations During Memory Page Scan

This device can auto scan all stored stations within a memory page, staying on each station for about 5 seconds, and giving you the opportunity to delete any unwanted stations.

- 1) Use the [PAGE -] or [PAGE +] button to select the memory page from which to delete stored stations.
- 2) Press and hold the [VF/VM] button to start the memory scan.
- 3) Upon finding an unwanted station, press the [DEL.] button. No confirmation is required and scanning continues immediately.
- 4) To stop the memory scan, quick press the [VF/VM] button or gently rotate the [TUNING] knob.

Deleting All Stored Stations

To delete all stations within a memory page:

- 1) Select the memory page from which you wish to delete all stored stations.
- 2) Press and hold the [DEL.] button until “dEL” and “PAGE” flash on the display.
- 3) Quick press the [DEL.] button again to confirm.

Note: In Page 0, stored stations need to be deleted for each frequency band or mode (SYNC/SSB) separately.

To delete all stations from the memory:

- 1) Turn the device off.
- 2) Press and hold [DEL.] until “dEL” and “ALL” flash on the display.
- 3) Quick press the red (POWER/SLEEP) button to confirm and delete all stored stations.

Note: If the red (POWER/SLEEP) button is not pressed for confirmation within 3 seconds, the delete function is exited automatically.

Using the (AM) Antenna Gain [DX/Normal/Local] Switch

The distance and transmission power of radio stations are not all the same; some received signals will therefore be strong whereas others are weak. To improve the listening experience, sensitivity can be adjusted with the [DX/NORMAL/LOCAL] switch. When listening to distant and weak signal stations, select “DX” to increase sensitivity. When listening to strong (local) signals that seem distorted, select “LOCAL” to avoid strong signal overload blocking.

AM Bandwidth Selection

Quick press [AM BW] repeatedly, or press and then rotate the [FINE TUNING] knob, to select different bandwidths to enhance the intelligibility of longwave, medium wave and shortwave signals. Selectable bandwidths are:

LW/MW: 2.3, 3.5, 5.0 and 9.0kHz.

SW: 2.3, 3.5, 5.0 and 6.0kHz.

SSB: 0.5, 1.2, 2.3, 3.0 and 4.0kHz.

- Wider bandwidth: Has better audio fidelity when receiving strong signals or local stations.
- Narrower bandwidth: Limits interference from adjacent strong signals and background noise, thereby especially suitable for receiving weak and distant stations.

Single Sideband (SSB)

When receiving longwave, medium wave and shortwave signals, you can activate the SSB mode to receive particular signals like for example amateur radio communication and Morse Code, but it can also help to mitigate interference.

Enable/Disable SSB mode: Quick press [LSB] (lower sideband) or [USB] (upper sideband) to enable the sideband. Quick press [SSB/SYNC] to disable SSB.

Synchronous Detection (SYNC)

When listening to longwave, medium wave and shortwave broadcasts, turning on synchronous detection may reduce noise interference, eliminate distortion caused by local fading during signal transmission, and suppress interference caused by adjacent stations.

Enable/Disable SYNC detection:

- 1) Press and hold [SSB/SYNC], the display shows “ SYNC ” and the radio enters the synchronous detection mode.
- 2) Quick press [LSB] or [USB] to select Lower Sideband or Upper Sideband SYNC detection.
- 3) To disable, quick press [SSB/SYNC] and “SYNC” disappears from the display.

Note: Enabling the SYNC detector does not always reduce interference.

FM Stereo/Mono Selection

While listening to FM, quick press [FM]. If the FM signal is in stereo the “ (◀▶) ” icon is shown on the display. Quick press [FM] again to return to mono listening.

Note: When the FM signal is broadcasted in mono, or if the station is broadcasted in stereo but the signal is weak, “ (◀▶) ” is not displayed.

Display Mode

When listening to the radio, quick press [DISPLAY/SNOOZE] repeatedly to select your preferred display mode. The top right corner of the display can show the signal strength/signal-to-noise ratio, alarm time “Timer A”, alarm time “Timer B”, clock time, or the memory location of the frequency (in VM mode only).

(2) AUDIO PLAYER MODE

Insert a microSD card with supported audio files into the card slot at the bottom of the device. Turn the device on. If in radio mode, quick press [MODE] (RADIO / MP3) to enter the audio player mode.

The display shows “ *PLAY* ” and “ *tf* ” and audio playback starts automatically.

Notes:

- Supported audio formats: 16bit / 44.1kHz, FLAC / WAV / APE / WMA and MP3.
- “ - - ” is displayed when there is no card inserted, the card is not supported, or the card does not contain any (supported) files.

Play/Pause: Quick press [▶▶]

Restart track: Quick press [◀◀]

Previous: Quick press [◀◀] twice, or rotate the [TUNING] knob downwards.

Next: Quick press [▶▶], or rotate the [TUNING] knob upwards.

Repeat track: Press and hold [►||] until the display shows “(1)”. Press and hold [►||] again to resume normal playback.

Rewind: Press and hold [◀◀]

Fast forward: Press and hold [▶▶]

Album Preview

During playback, quick press [DISPLAY/SNOOZE] to display the current album number and the total number of files within the album. Quick press [DISPLAY/SNOOZE] again to display the total number of albums and the total number of files on the microSD card.

Album Preview Mode

Selecting an Album (folder)

Method 1: Rotate the [FINE TUNING] knob.

Method 2: Rotate the [FINE TUNING] knob to select the next album, then use the numeric keys to enter an album number and press [↵] to confirm.

Selecting an Audio Track

Method 1: Rotate the [TUNING] knob or quick press [◀◀] / [▶▶].

Method 2: Rotate the [TUNING] knob to select the next track, then enter the desired audio track number using the numeric keys and press [↵] to confirm.

Deleting an Audio Track

- 1) Select the track you want to delete.
- 2) Press and hold [↵] until the track number and “DEL” flash on the display.
- 3) Quick press [↵] to confirm and deleted the track.

(3) COMPUTER SPEAKER MODE

You can use this device as a speaker for a computer by following the below steps:

- 1) Turn on the device and quick press [MODE] to enter the audio player mode.
- 2) Connect the digital audio input socket (USB type-C) on the left side of this device to the computer using a suitable USB data cable.
- 3) Turn on the audio player of the computer.

Note:

- If there is no sound, adjust the sound output settings of your computer, or turn off and restart the computer's audio player.
- You can use the [►||], [I◄◄] and [►►I] buttons to control audio playback, and use the [VOLUME], [TREBLE] and [BASS] knobs to adjust the audio output.

(4) OTHER SETTINGS AND FEATURES

Activating/Deactivating the Alarm

There are two independently programmable alarms to turn on the device at a specific time. Quick press [TIMER A] or [TIMER B] to activate the alarm. The alarm " " icon is shown on the display to indicate that the device will turn on at the preset time. Quick press again to deactivate the alarm setting.

Setting the Alarm Time

- 1) With the device off, press and hold [TIMER A], the alarm time in the upper right corner of the display will start to flash.
- 2) While still flashing, use the numeric keys to enter the time (4 digits in total). Alternatively, rotate the [TUNING] knob to adjust the hour and the [FINE TUNING] knob to adjust the minutes, followed by [←] to confirm. The duration of the alarm now flashes on the display.
- 3) While still flashing, rotate the [TUNING] knob to set the duration after which the device turns off (01 - 60 minutes).
- 4) Quick press [TIMER A] to confirm the setting. The alarm " " icon is shown on the display. For setting [TIMER B] you can follow the same steps.

Setting the Alarm by Radio or Audio Player

● Alarm by radio

- 1) Turn on the device, select the station frequency you want to use as the alarm.
- 2) Quick press [MEM.], the memory location will flash.
- 3) While still flashing, quick press [TIMER A] or [TIMER B], the alarm “” icon starts flashing.
- 4) While still flashing, quick press [], “” stops flashing and the setting is complete.
- 5) Make sure to adjust the volume to an appropriate level.

● Alarm by audio player

- 1) Insert a microSD card containing audio files.
- 2) Enter the audio player mode and select the audio track you want to use as the alarm.
- 3) Quick press [MEM.], the “” icon starts flashing.
- 4) While still flashing, quick press [TIMER A] or [TIMER B], the “” and “” icon will flash simultaneously.
- 5) While still flashing, quick press [], “” and “” stop flashing and the setting is complete.
- 6) Make sure to adjust the volume to an appropriate level

Tips:

- Once the preset alarm time is reached, the radio turns on and stays on for as long as the alarm duration (01 – 60 minutes) was set. To turn off the device during the alarm playtime, quick press the red (POWER/SLEEP) button twice.
- If you wish to change the radio frequency during the alarm playtime, quick press the red (POWER/SLEEP) button. This will deactivate the alarm after which you can adjust the frequency.
- If you wish to choose other audio tracks during the alarm playtime, quick press the red (POWER/SLEEP) button. This will deactivate the alarm after which you can use the audio player normally.

Snooze Function

When the alarm goes off, press [DISPLAY/SNOOZE] to temporarily turn off the alarm. The alarm will go off again after 5 minutes. To disable this feature while still snoozing, quick press the red (POWER/SLEEP) button.

Display Backlight

With the device on, press and hold the [5] (BACKLIGHT) button to set your preference:

“ON”: Backlight is set to always-on.

“OFF”: Backlight turns on when a button or tuning knob is operated and turns off after 5 seconds.

Setting the Sleep Timer

Use this feature to listen to the radio or audio player and let the device automatically power off after a specified time.

- 1) Turn the device off.
- 2) Press and hold the red (POWER/SLEEP) button to enter the sleep timer setting.
- 3) Rotate the [TUNING] knob to select a power-off timer of 1-120 minutes, or select "Off" to deactivate the sleep timer.

- 4) Quick press [←] to confirm. The sleep timer "SLEEP" icon is shown on the display.

Keylock

To activate the keylock, press and hold [DISPLAY/SNOOZE]. The lock "🔒" icon is displayed and the buttons, treble, bass and tuning knobs are disabled. Press and hold [DISPLAY/SNOOZE] again to unlock.

Treble & Bass

Use the [TREBLE] and [BASS] knobs to adjust the treble (higher frequencies) and bass (lower frequencies) of the speakers' sound.

Using Headphones

Plug a stereo headphone (below 300Ω) into the [EARPHONES] socket.

Stereo Audio Input (Line In)

Use H-501 as a speaker for an external audio source. Use a stereo audio cable with a 3.5 mm (1/8 inch) plug to connect the [LINE IN] socket of H-501 to the audio output socket of the source.

Stereo Audio Output (Line Out)

To feed audio to external amplifiers, amplified speakers or recording equipment. Use a stereo audio cable with a 3.5 mm (1/8 inch) plug to connect the [LINE OUT] socket of H-501 to the audio input socket of the external device.

Note: Volume, treble and bass control on this device is disabled while feeding audio through the [LINE OUT] socket.

Troubleshooting

ISSUE	POSSIBLE CAUSE / SOLUTION
Unable to power on the device.	Battery has no power, is installed incorrectly, or the A-B battery switch is not in the correct position. ● Replace, charge or reinstall the battery. ● Push the A-B battery switch in the correct position.
Unable to charge the battery.	Charging instructions are not followed correctly, or the lithium battery is aging. ● Connect the charger to the “charge” socket on the right side of the device. ● Push the A-B battery switch in the correct position. ● Replace the battery.
Radio auto turns off while listening.	Battery has no power or the sleep timer is activated. ● Replace or charge the battery. ● Deactivate the sleep timer and turn the radio back on.
ATS skips stations, or some stored stations have only noise.	The radio signal is too weak, there is strong interference, or MW (AM) tuning steps are not set accurately. ● Search and store stations manually. ● Adjust the length and direction of the antenna or change to a different location and try again. ● The MW tuning steps may have been set incorrectly. Please review page 7 and then try again.
Poor MW (AM) reception while using in North or South America.	MW (AM) stations are spaced at 10 kHz in the Americas, the device may be set to 9 kHz tuning steps. ● Turn off the device, then press and hold the [3] button to change the MW tuning step to 10 kHz.
Only few FM stations can be received.	FM frequency range may not be set correctly for your country. ● Find information about the FM frequency coverage in your country. Turn off the radio, press and hold the [1] button to select a suitable range.
Audio quality is not good when listening to LW, MW (AM) and SW.	The AM bandwidth is set to a narrow band. ● Press the [AM BW] button repeatedly to change to a wider bandwidth.
When the alarm goes off the radio broadcast is only noise.	Alarm preset radio frequency was not properly set, or there are no broadcasts at that time. ● Assure that receiving a broadcast is possible at the alarm time and the location where the device is placed. ● Switch to alarm by audio player instead of radio.

System Reset

This device works on advanced and stable firmware to enhance users' enjoyment. In the event that a sudden firmware glitch does occur (e.g. unresponsive or erratic behavior of buttons/knobs, LCD display issues) press the [RESET] button with a pointy object to return to normal operation; stored stations will not be lost when resetting the firmware.

Maintenance

- Keep it dry. Rain, humidity and other types of liquids or moisture can contain minerals that may cause corrosion to components. If the device does accidentally get wet, remove the battery and wait for the radio to dry completely before placing it back.
- Do not place or store the device in environments above +45°C.
High temperatures can shorten the life span of certain components.
- Do not place or store the device in cold environments below -5°C .
Otherwise, once the surrounding temperature rises, internal condensation may develop and damage the circuit board and LCD display.
- Do not drop, hit, or smash the device.
- Do not use harsh chemicals, cleaning solvents, or strong detergents to clean the device. Use a clean, soft, dry cloth to clean the screen.
- Do not attempt to disassemble the device to adjust internal parameters.

Lithium Battery Safety Instructions

- Improper replacement of the lithium battery may result in an explosion. Replace only with a lithium battery of the same type or equivalent (the lithium battery used in this device is a 18650 rechargeable lithium battery with a protection circuit).
- Do not charge non-rechargeable batteries.
- Do not expose the battery to heat sources (e.g. sunlight, fire), low temperatures, humidity, or high pressure.
- Dispose of the battery properly and prevent children from playing with electric currents.
- Do not short-circuit or disassemble the battery. If the battery is seriously inflated, please do not continue to use it.
- If not using for an extended period of time, remove the battery and store it in a safe manner. Please use non-conductive material to wrap the battery in order to avoid direct contact with metal. You can avoid performance loss by keeping the battery in a cool dry place.
- Please consciously abide by aviation regulations; lithium batteries are strictly prohibited from placing into checked luggage.

H-501 Specifications

Station Memory: 3150 in total

Frequency Range:

LW: 100 ~ 519kHz, 9kHz tuning / 1kHz fine-tuning
MW (AM): 520 ~ 1710kHz, 10kHz tuning / 1kHz fine-tuning
522 ~ 1620kHz, 9kHz tuning / 1kHz fine-tuning
SW: 1711 ~ 29999kHz, 5kHz tuning / 1kHz fine-tuning
(When LW, MW and SW are received in SSB mode,
the tuning step is 1kHz and the fine-tuning step is 10Hz)
FM: 64 ~ 108MHz (suitable for Russia/Eastern Europe)
76 ~ 108MHz (suitable for Japan)
87 ~ 108MHz (suitable for Europe, Oceania, Africa, Asia)
87.5 ~ 108MHz (suitable for the Americas)
(The tuning step is 100kHz and the fine-tuning step is 10kHz)

Sensitivity:

LW (S/N=26dB) < 3mV/m
MW (S/N=26dB) < 1mV/m
SW (S/N=26dB) < 20 μ V
FM (S/N=30dB) < 3 μ V
SSB (S/N=10dB) < 1 μ V

Selectivity:

LW/MW > 40dB
SW > 40dB
FM > 65dB

SYNC Lock Range: +/- 1kHz

S/N Ratio:

LW/MW > 40dB
SW > 45dB
FM > 60dB

IF Frequency:

AM: 1st IF: 55.845MHz, 2nd IF: 10.7MHz, 3rd IF (DSP): 45kHz
FM: 128kHz

FM Stereo Crosstalk: 33dB

Output Power: $\geq 500\text{mW} \times 2$ (at 10% harmonic distortion)

Shutdown Current: $< 120\mu\text{A}$

MicroSD Card: Max. 128GB

Supported Audio: 16bit / 44.1kHz; FLAC / WAV / APE / WMA / MP3

Speakers: 6 Ω , 3W x 2

Headphone Input: 3.5mm / $< 300\Omega$

Power Supply: 3.7V (18650 Li-ion battery x 1) or external DC 5V

Charger / Power: 5V --- 1A, USB type-C socket

Dimensions: 277 (W) x 167 (H) x 44 (D) mm

Weight (excl. battery): 1.1kg

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception,

which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
