LoRa AIOT Development Kit

A development board based on the ESP32-S3 processor that can realize AI chat and intercom functions. It is equipped with LoRa and GPS modules perfectly meeting various AIoT development needs.

Features:

- Equipped with a dual-core processor for high-performance computing, with WiFi connection capabilities.
- Equipped with long-range and ultra-low power consumption communication devices.
- Equipped with a multi-satellite high-precision positioning module.
- Compatible with Ar duino, with rich extended IO and display screen interfaces.
- Equipped with a camera expansion interface, which can realize AI image recognition.

About Meshnology
Meshnology is an innovative company. We focus on open-source hardware and smart connectivity tech. Our vision "Open Ecosystem and Connect to Create Value". We devote to afford easy, flexible tools and components to developers worldwide. We work on three key areas: LoRa mesh networks, IoT solutions, and robot development tools, as well as drive tech popularization in application. We offer customizable open-source hardware solutions and modules. These are for developers, makers, and enterprises. They make development easier, smoother, and more reliable. And we help get these technologies into real use faster.
