Quick Start Guide

★ Step 1- Memory Card Installation

Before using the dash cam, insert a compatible microSD card (Class 10, UHS Speed Class 3 [U3] or higher, max. 512GB).

★ Step 2- Power Connection

Connect the dash cam to a power source using the included USB Type-C cable—it will power on automatically .

- Important: This dash cam uses a supercapacitor rather than a battery. It must remain plugged in at all times to operate.
- For temporary use, connect to a standard 5V USB wall charger (e.g., smartphone charger).

★ Step 3- AMGEKE App Setup

Download the App by scanning the QR code or searching “AMGEKE” on the Apple App Store (iOS) or Google Play Store (Android). Pair the App with the dash cam for remote access (see details on p.15).

★ Step 4- Initial Configuration

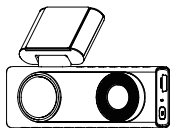

- Set your time zone via **Time Zone** function using your local UTC offset (see details on p.13).
- Format the memory card via **Format** function (required for first-time use).

★ Step 5- Ready to Use

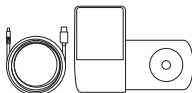

The dash cam operates on optimized default settings. Customize settings further via the AMGEKE App or manual controls .

Product Overview

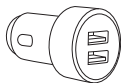

■ Standard Items

ORSKEY Front Camera

Rear Camera
(6m/20ft cable)

12V Car Charger
Adapter

USB Type-C Car Charger
