

System Settings

Note

1. The S5 hardwiring kit is required to enable Advanced Parking Mode recording and is sold separately.
2. 1fps represents one image captured per second. All parking surveillance videos are saved in Parking folders. The front camera's parking recording files are named as Year_Date_Time_*****A, and Year_Date_Time_*****B for the rear camera.

- **Volume:** Allow you to select the volume that suits you best.
Options: OFF / Low / Middle / High
- **Boot-up Sound:** Enable or disable the start-up tone.
Options: ON / OFF
- **Beep Sound:** Enable or disable all system alert tones.
Options: ON / OFF
- **LED Status Indicator:** Control the device's LED Status Indicator light on/off.
Options: ON / OFF
- **Fatigue Driving Reminder:** When enabled, it will issue a prompt within the set time to remind you to take a timely break and ensure your safety.
 - Options: OFF / 1 Hour / 2 Hours / 3 Hours / 4 Hours
- **Format Reminder:** The device periodically reminds you to format the storage card, reducing risk of data corruption from prolonged use.
 - Options: OFF / 15 Days / 30 Days / 60 Days / 90 Days
- **Storage Space:** Check the memory card's capacity usage.
- **License Plate:** Optionally input your vehicle's license plate number to overlay it on recorded videos.
- **Format:** Formatting the Micro SD card will permanently erase all data stored on it. Before proceeding, ensure you have backed up any important files, as the operation cannot be undone.
- **Default Setting:** Reset all configurations to the original factory state.
- **APP:** Download the app by scanning the QR code.
- **Card Speed Test:** Checks the memory card's quality to determine if it meets the device's usage standards.
- **Version:** Check the installed firmware version for updates.
