

S5 Hardwire Kit Installation

Tips

1. After activation, the screen displays the parking monitoring icon, then turns off, and the indicator light turns red.

2. Parking Mode Function Settings Recommendations

To optimize performance and protect your car's battery, set the continuous monitoring duration based on battery age:

- New batteries (within 1 year): Maximum 48 hours.
- Batteries aged 1–2 years: Maximum 24 hours.
- Batteries older than 2 years: Maximum 12 hours.

3. Avoid Wiring Errors:

Two wiring errors can disrupt the parking mode:

- Connecting yellow and red wires to ACC power disables parking monitoring.
- Connecting both wires to Battery power keeps the dash cam active, draining the battery.

Important: Incorrect wiring may cause battery drain, short circuit, or permanent vehicle damage. Verify parking mode functionality by waiting 15 minutes after engine shutdown, as some vehicles have a delayed power-off feature.
