

FCC ID Label Artwork and Location

C100

On Device

The regulatory label is permanently located on the Tail component inside the battery service area. The Tail is a fixed, structural part of the device enclosure and must remain attached for the device to operate. The label can be viewed during a standard battery replacement procedure using the service tool provided for access. Given that the device is palm sized, the FCC ID is also listed in the User's Manual.

The model number is etched on the Tail's exterior surface of the device and is always visible without using any tool.
