

Labeling Justification for FCC ID: 2BT39MD750

Date: April 1, 2026

To: Federal Communications Commission
7435 Oakland Mills Road
Columbia, MD 21046-1609

To Whom It May Concern:

Regarding the application for the above-referenced FCC ID, Tintometer, Inc. provides the following justification regarding the placement of the FCC ID label:

1. The module (Model: LBEE5PL2DL) is physically too small to accommodate a label with legible text (4-point font or larger) containing the full FCC ID.
2. This module is not sold to third parties or the general public. It is utilized exclusively by Tintometer, Inc. Because the module is enclosed within the host system, it is not accessible to the end-user.
3. Since the module is installed exclusively by Tintometer, Inc., the FCC ID is permanently displayed in our MD750 Instrument Manual (see Page 5). This manual serves as the primary documentation for the qualified personnel operating and maintaining the system.
4. The FCC ID is also clearly visible on rear cover of the host device (the MD750), ensuring it is identifiable without opening the enclosure.

Sincerely,

A handwritten signature in black ink, appearing to read "John Crowley", with a stylized, looping flourish.

Name: John Crowley
Title: Director of Research & Development
