The diagram shows a hydraulic system. On the left is a pump labeled 'Pump'. It is connected to two cylinders. The top cylinder is labeled 'Cylinder' and has a piston rod extending to the right. The bottom cylinder is labeled 'Cylinder' and has a piston rod extending to the left. A valve labeled 'Valve' is located between the two cylinders, connected to the lines from the pump. The pump is connected to the valve, which then branches to the two cylinders.

a) Position	Position of the body and limbs at the start of the movement.
b) Position	Position of the body and limbs at the end of the movement.
c) Position	Position of the body and limbs at the end of the movement.

1. Identify the problem. 2. Identify the cause. 3. Identify the effect. 4. Identify the solution. 5. Identify the outcome. 6. Identify the impact. 7. Identify the result. 8. Identify the consequence. 9. Identify the effect. 10. Identify the outcome.	Problem	The car was broken down.
	Cause	The car was old and had many problems.
	Effect	The car was not running.
	Solution	The car was fixed.
	Outcome	The car was running again.
	Impact	The car was able to drive.
	Result	The car was able to drive.
	Consequence	The car was able to drive.
	Effect	The car was able to drive.
	Outcome	The car was able to drive.

[illegible]

The 4-Step Process

1. Identify the problem
2. Analyze the problem
3. Develop a solution
4. Implement the solution

Figure 10.10 The Windows 8 Start screen. The Start screen is the first screen you see when you turn on the computer. It displays a collection of tiles that represent the apps and settings you use most often. The tiles are arranged in a grid, and you can tap them to launch the corresponding app or settings page.

Figure 10-10

Figure 1 displays a sequence of six grayscale images arranged in a 2x3 grid, illustrating the progression of a car accident reconstruction. The top row shows the initial scene with a car and a person. The bottom row shows the car's position after a collision, with a red car visible in the third image.

[illegible]

The app is designed to be used on a smartphone

Illustration of a smartphone displaying a purple flower.

Figure 1 shows two mobile devices displaying the 'My Health' app. The top device shows a grid of icons for various health services. The bottom device shows a detailed view of a specific service.

It's important that you make sure the database you use with your mobile application is able to connect to the Internet.

The diagram illustrates a mobile application connected to a website, which in turn is connected to a server. The mobile application is shown as a smartphone displaying a web page. The website is shown as a computer monitor displaying a web page. The server is shown as a black box with a blue globe icon and the text 'Server' below it. Arrows indicate the flow of data between the mobile application, the website, and the server.

It's important that you make sure the database you use with your mobile application is able to connect to the Internet.

[illegible]

1. **Identify the problem.** Before you can solve a problem, you must first identify it. This involves looking at the situation and asking yourself, "What is the problem?"

2. **Generate ideas.** Once you have identified the problem, you need to generate ideas for how to solve it. This involves brainstorming and looking for creative solutions.

3. **Evaluate the ideas.** After you have generated ideas, you need to evaluate them. This involves looking at the pros and cons of each idea and deciding which one is the best.

4. **Implement the solution.** Once you have evaluated the ideas, you need to implement the solution. This involves putting your chosen idea into action.

5. **Reflect on the process.** After you have implemented the solution, you need to reflect on the process. This involves thinking about what you learned and how you can improve your problem-solving skills in the future.

FCC Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
 - Increase the separation between the equipment and receiver.
 - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
 - Consult the dealer or an experienced radio/TV technician for help.
- Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment.

RF Exposure Information

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
