

FCC Module Sticker Location Documentation

Submission Document for FCC Module Certification

Introduction

This document outlines the sticker location for the FCC module as required for certification submission. All images referenced in this document are included and clearly demonstrate the placement of the FCC identification sticker on the module.

Module Overview

The FCC module is designed for integration into various devices. It is essential that the FCC sticker is affixed in a manner that is both visible and permanent, in accordance with regulatory requirements.

Sticker Location Details

The sticker is placed on the flat surface of the module, ensuring there is no interference with other components. The area selected guarantees visibility and durability during normal operation and maintenance.

- **Sticker Size:** Standard FCC-compliant dimensions 50mm x 30mm
- **Sticker Content:** FCC ID, manufacturer details, and relevant symbols
- **Sticker Placement:** Back flat surface of the module casing (see attached photos)

Photo Evidence

Below are the photos illustrating the exact location and orientation of the FCC sticker on the module. Each image is labelled for clarity and cross-referenced with the module description.

Photo	Description	
Photo 1		Module overview with sticker visible

A black, rectangular, foldable device, possibly a smart card or a small tablet, is shown against a dark background. The device has a central screen area displaying a QR code and some text. The text includes a logo, the word "L001", and a URL. The device is shown in a slightly open or folded position, revealing its internal structure.

Close-up of sticker placement

Compliance Statement

The sticker placement complies with FCC regulations, ensuring that identification remains intact and clearly visible throughout the lifecycle of the module.
