Charging Guide

For the first time use, please fully charge the product before turning it on. This helps calibrate the battery. And it is recommended to charge the product regularly.

If you do not plan to use the product for an extended period, please charge the battery to approximately 50-60%. Store the product in a cool, dry place and recharge it every three months to maintain battery health.

Connect BOOM GO with power supply rated 5V-1A via the provided charging cable to charge, the Indicator will be solid green. It will take 2-3 hours to fully charge the device. Once fully charged, the indicator will turn solid White.

Note:

Use only the provided or manufacturer-approved charger and cable.
Avoid exposing the product to extreme temperatures during charging.
To save energy, disconnected with devices for 10 minutes, BOOM GO will turn off automatically.

FCC WARNING

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
