

A detailed view of the interior of a custom-built computer case. At the top, a silver power supply unit (PSU) is visible, featuring a black fan with a circular logo that reads "SAMSUNG". To the right of the PSU is a yellow component, likely a graphics card or a specialized interface board. Below these, a green motherboard is populated with various components, including a CPU, RAM modules, and numerous peripheral connectors. A dense network of black, white, and colored cables is routed across the motherboard and throughout the case, secured with black zip ties. The overall setup suggests a specialized or high-performance computing environment.
