## RF TEST REPORT

**Applicant :** Shenzhen Xiaobi Technology Co., Ltd.

**Address:** guanhujiedaoluhushequguanshengerlu5haojieshunkejizhongxinB607  
shenzhen shi guangdong 518000 CN

**Manufacturer:** Dongguan Dingshuai Electronic Technology Co., Ltd.

**Address:** Building 3, No. 511, Daling Mountain Section of Guanchang Road, Daling  
Mountain Town, Dongguan City, Guangdong Province

**EUT Name:** wireless mouse

**Trade mark:** /

**Model:** G9Pro

**FCC ID:** 2BWN6-G9PRO

**Rating:** DC 5V  
Battery 3.7V

**Sample Received Date:** Jun. 3, 2026

**Test Date:** Jun. 3, 2026~Jun. 12, 2026

**Applicable Standards:** FCC 47, CFR Part 15.247

**Test Result** Pass

## 1. TEST SUMMARY

| FCC Part 15C            | Description of Test            | Result |
|-------------------------|--------------------------------|--------|
| 15.247(b)(4)&15.203     | Antenna Requirement            | Pass   |
| 15.247(b)(3)            | Maximum Conducted Output power | Pass   |
| 15.247(a)(2)            | 6 dB Bandwidth                 | Pass   |
| 15.247(e)               | Power Spectral Density         | Pass   |
| 15.247(d)               | Out of Band Conducted Emission | Pass   |
| 15.247(d)&15.205&15.209 | Band edge                      | Pass   |
| 15.247(d)&15.205&15.209 | Spurious Radiated Emission     | Pass   |
| 15.207                  | Conducted Emission on AC Mains | Pass   |

## 2. TEST SITE

### 2.1. Test Facility

HD Testing Technology (GuangDong) Co., Ltd.

Address: Building 1, No.18, Shihuan Road, Dongcheng Subdistrict, Dongguan, Guangdong, China

A2LA Certificate Number.:7547.01

FCC Designation Number:CN1419

FCC Test Firm Registration Number:361541

ISED Company Number:34332

ISED CAB identifier Number:CN0189

### 2.2. Measurement Uncertainty

| Parameter                        | Uncertainty          |
|----------------------------------|----------------------|
| Conducted Emission(150KHz-30MHz) | $\pm 3.2\text{dB}$   |
| Radiated Emission(9KHz-30MHz)    | $\pm 3.5\text{dB}$   |
| Radiated Emission(30MHz-1GHz)    | $\pm 4.7\text{dB}$   |
| Radiated Emission (1GHz-6GHz)    | $\pm 5.1\text{dB}$   |
| Radiated Emission (6GHz-18GHz)   | $\pm 5.1\text{dB}$   |
| Radiated Emission (18Hz-40GHz)   | $\pm 5.3\text{dB}$   |
| Occupied bandwidth               | $\pm 1.9\%$          |
| Duty cycle                       | $\pm 0.11\%$         |
| Power Spectral Density           | $\pm 0.98\text{ dB}$ |

Note 1: This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of  $k=2$ .

### 2.3. Test Environment Condition

|                            |         |
|----------------------------|---------|
| Ambient Temperature:       | 24~25°C |
| Ambient Relative Humidity: | 55~60 % |

This report is governed by, and incorporates by reference, the conditions of testing as posted at the date of issuance of this report at <http://www.hdt-lab.com/> and is intended for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Measurement uncertainty is only provided upon request for accredited tests. Statements of conformity are based on simple acceptance criteria without taking measurement uncertainty into account, unless otherwise requested in writing. You have 15 days from date of issuance of this report to notify us of any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.

#### 4. EUT DESCRIPTION

## 5. TEST METHODOLOGY

Both AC mains line-conducted and radiated emission measurements were performed according to the procedures in ANSI C63.10-2020+Cor.1-2023 and KDB 558074 D01 15.247 Meas Guidance v05r02.

### 5.1. EUT System Operation

For emissions testing, the equipment under test (EUT) setup to transmit continuously to simplify the measurement methodology. Care was taken to ensure proper power supply voltages during testing. During testing, all cables were manipulated to produce worst case emissions. The EUT was powered by DC 5V from adapter or AC120V 50/60Hz during the test.

### 5.2. Configuration and Mode

We have verified the construction and function in typical operation. All the test modes were carried out with the EUT in transmitting operation, which was shown in this test report and defined as follows.

Based on the baseline scan, the worst-case data rates were:

| Mode | Data rate |
|------|-----------|
| GFSK | BLE 1Mbps |

## 6. SETUP OF EQUIPMENT UNDER TEST

### 6.1. Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

#### Support Equipment

| No. | Equipment             | Model                | Serial No. | Manufacturer |
|-----|-----------------------|----------------------|------------|--------------|
| 1   | Notebook              | Lenovo Rescuer 15ISK | PF0GS9S1   | Lenovo       |
| 2   | USB serial port board | DreamLnk DL-USB-DK   | /          | LCSC         |
| 3   | Adapter               | MNY-14-EE            | /          | MI           |

#### Support Cable

| No. | Description | Shield | Length | Manufacturer |
|-----|-------------|--------|--------|--------------|
| 1   | /           | /      | /      | /            |
| 2   | /           | /      | /      | /            |

Note:

- 1) All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.
- 2) Grounding was established in accordance with the manufacturer's requirements and conditions for the intended use.

### 6.2. Block Diagram of EUT Configuration

Conducted and radiated emission configuration

## 7. TEST RESULTS AND MEASUREMENT DATA

### 7.1. Antenna Requirement

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Test Requirement:</b> | <p>FCC Part Part 15.203</p> <p>An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section.</p> <p>FCC Part 15.247(b)(4)</p> <p>The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi.if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.</p> |
| <b>Test Result:</b>      | <p>According to the manufacturer declared, the EUT has a PCB antenna, the Maximum directional gain of antenna is 2.34dBi, and the antenna connector is designed with permanent attachment and no consideration of replacement.</p> <p>Therefore the EUT is considered sufficient to comply with the provision.</p> <p>Refer to EUT Photo for further details.</p>                                                                                                                                                                                                                                                                                                                                                                                                        |

This report is governed by, and incorporates by reference, the conditions of testing as posted at the date of issuance of this report at <http://www.hdt-lab.com/> and is intended for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Measurement uncertainty is only provided upon request for accredited tests. Statements of conformity are based on simple acceptance criteria without taking measurement uncertainty into account, unless otherwise requested in writing. You have 15 days from date of issuance of this report to notify us of any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.

## 7.5. Out of Band Conducted Emission

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|                   | Above 960                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 500                               | 3                            |                       |                                   |                              |             |             |     |             |              |    |            |    |    |       |     |   |        |     |   |         |     |   |           |     |   |
| Test Procedure:   | <p>1. The EUT was placed on a turntable with 1.5 meter for frequency above 1GHz respectively above ground.</p> <p>2. The EUT was set 3 meters from the interference receiving antenna, which was mounted on the top of a variable height antenna tower.</p> <p>3. For each suspected emission, the EUT was arranged to its worst case and then tune the Antenna tower (from 1 m to 4 m) and turntable (from 0 degree to 360 degrees) to find the maximum reading. A pre-amp and a high pass filter are used for the test in order to get better signal level to comply with the guidelines.</p> <p>4. Set to the maximum power setting and enable the EUT transmit continuously.</p> <p>Note:Both horizontal and vertical antenna polarities were tested and performed pretest to three orthogonal axis(X, Y, Z,). The worst case emissions were reported</p> |                                   |                              |                       |                                   |                              |             |             |     |             |              |    |            |    |    |       |     |   |        |     |   |         |     |   |           |     |   |

This report is governed by, and incorporates by reference, the conditions of testing as posted at the date of issuance of this report at <http://www.hdt-lab.com/> and is intended for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Measurement uncertainty is only provided upon request for accredited tests. Statements of conformity are based on simple acceptance criteria without taking measurement uncertainty into account, unless otherwise requested in writing. You have 15 days from date of issuance of this report to notify us of any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.

### 7.6.1. Test Setup:

Test set-up of radiated disturbance (Above 1GHz)

### 7.6.2. Test Result

|              |         |
|--------------|---------|
| Test Voltage | DC 3.7V |

| Test Procedure:   | <p>Radiated emission measurements were performed from 9kHz to tenth harmonic or 40GHz. The EUT for testing is arranged on a styrene turntable. If some peripherals apply to the EUT, the peripherals will be connected to EUT and the whole system. During the test, all cables were arranged to produce worst-case emissions. The signal is maximized through rotation. The height of antenna and polarization is changing constantly for exploring for maximum signal level. The height of antenna can be up to 4 meters and down to 1 meter.</p> <p>Note:Both horizontal and vertical antenna polarities were tested and performed pretest to three orthogonal axis(X, Y, Z,). The worst case emissions were reported</p> |                                   |                              |                       |                                   |                              |             |             |     |             |              |    |            |    |    |       |     |   |        |     |   |         |     |   |           |     |   |
| Test Result:      | PASS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                   |                              |                       |                                   |                              |             |             |     |             |              |    |            |    |    |       |     |   |        |     |   |         |     |   |           |     |   |

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Measurement uncertainty is only provided upon request for accredited tests. Statements of conformity are based on simple acceptance criteria without taking measurement uncertainty into account, unless otherwise requested in writing. You have 15 days from date of issuance of this report to notify us of any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.

### 7.7.1. Test Setup:

Test set-up of radiated disturbance (Up to 30MHz)

Test set-up of radiated disturbance (30MHz to 1GHz)

Test set-up of radiated disturbance (Above 1GHz)

### 7.7.2. Test Result

|              |         |
|--------------|---------|
| Test Voltage | DC 3.7V |
|--------------|---------|

#### Note:

1.The low frequency, which started from 9 kHz to 30MHz, was pre-scanned and the result which was 20dB lower than the limit line was not reported.

|                   | *Decreases with the logarithm of the frequency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                        |           |
| Test Procedure:   | For tabletop equipment, the EUT along with its peripherals were placed on a 1.0m(W)×1.5m(L) and 0.8m in height wooden table. The EUT was adjusted to maintain a 0.4 meter space from a vertical reference plane. The EUT was connected to power mains through a line impedance stabilization network (LISN), which provided 50 ohm coupling impedance for measuring instrument and the chassis ground was bounded to the horizontal ground plane of shielded room. The excess power cable between the EUT and the LISN was bundled. |                        |           |
| Test Result:      | PASS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                        |           |

### 7.8.1. Test Setup

## HD Testing Technology (GuangDong) Co., Ltd.

Building 1, No.18, Shihuan Road, Dongcheng Subdistrict,

Dongguan, Guangdong, China

Tel: +86-0769-22221088

This report is governed by, and incorporates by reference, the conditions of testing as posted at the date of issuance of this report at <http://www.hdt-lab.com/> and is intended for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Measurement uncertainty is only provided upon request for accredited tests. Statements of conformity are based on simple acceptance criteria without taking measurement uncertainty into account, unless otherwise requested in writing. You have 15 days from date of issuance of this report to notify us of any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.

## 7.8.2. Test Result

Test Voltage DC 5V Powered by AC 120v adapter

Worst-case: BLE 1Mbps-2440MHz

Please refer to the following diagram:

This report is governed by, and incorporates by reference, the conditions of testing as posted at the date of issuance of this report at <http://www.hdt-lab.com/> and is intended for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Measurement uncertainty is only provided upon request for accredited tests. Statements of conformity are based on simple acceptance criteria without taking measurement uncertainty into account, unless otherwise requested in writing. You have 15 days from date of issuance of this report to notify us of any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.
