

# FCC REPORT

**Applicant:** DawnSun Electronic Technology.Co.,Ltd.ZhongShan

**Address of Applicant:** NO.8 NANYI STREET ,XINGGONG RD SHAXI TOWN,  
ZHONGSHAN,GUANGDONG, China

**Manufacturer/ Factory:** DawnSun Electronic Technology Co., Ltd. Zhongshan

**Address of  
Manufacturer// Factory:** 8# Nanyi Street, Xinggong Road, Longxing Industrial District,  
Shaxi Town, Zhongshan, Guangdong, China 528471

**Equipment Under Test (EUT)**

Product Name: Remote Control-Transmitter

Model No.: TX043N, TX043L, TX043R, TX043C, TX043LR, TX043LC,  
TX043RC, TX043LRC

**FCC ID:** A25-43

**Applicable standards:** FCC CFR Title 47 Part 15 Subpart C Section 15.231

**Date of sample receipt:** April 17, 2018

**Date of Test:** April 18-23, 2018

**Date of report issued:** April 23, 2018

**Test Result :** PASS \*

\* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

**Robinson Lo**

**Laboratory Manager**

This results shown in this test report refer only to the sample(s) tested, this test report cannot be reproduced, except in full, without prior written permission of the company. The report would be invalid without specific stamp of test institute and the signatures of compiler and approver.

## 4 Test Summary

| Test Item                                | Section in CFR 47 | Result |
|------------------------------------------|-------------------|--------|
| Antenna Requirement                      | 15.203            | Pass   |
| Conduction Emission                      | 15.207            | N/A    |
| Field strength of the Fundamental Signal | 15.231 (b)        | Pass   |
| Spurious Emissions                       | 15.231 (b)/15.209 | Pass   |
| 20dB Bandwidth                           | 15.231 (c)        | Pass   |
| Dwell Time                               | 15.231 (a)(1)     | Pass   |

*Pass: The EUT complies with the essential requirements in the standard.*

*N/A: Not applicable*

### 4.1 Measurement Uncertainty

| Test Item                                                                                             | Frequency Range | Measurement Uncertainty | Notes |
|-------------------------------------------------------------------------------------------------------|-----------------|-------------------------|-------|
| Radiated Emission                                                                                     | 9kHz ~ 30MHz    | $\pm 4.34\text{dB}$     | (1)   |
| Radiated Emission                                                                                     | 30MHz ~ 1000MHz | $\pm 4.24\text{dB}$     | (1)   |
| Radiated Emission                                                                                     | 1GHz ~ 26.5GHz  | $\pm 4.68\text{dB}$     | (1)   |
| AC Power Line Conducted Emission                                                                      | 0.15MHz ~ 30MHz | $\pm 3.45\text{dB}$     | (1)   |
| Note (1): The measurement uncertainty is for coverage factor of k=2 and a level of confidence of 95%. |                 |                         |       |

## 5 General Information

### 5.1 General Description of EUT

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                     |    |    |           |          |  |  |    |    |    |         |  |  |  |         |   |  |  |         |  |   |  |         |  |  |   |          |   |   |  |          |   |  |   |          |  |   |   |           |   |   |  |

## 5.2 Test mode

|                   |                                    |                                     |
|-------------------|------------------------------------|-------------------------------------|
| Transmitting mode | Keep the EUT in transmitting mode. | New battery is used during all test |
|-------------------|------------------------------------|-------------------------------------|

### Per-test mode.

We have verified the construction and function in typical operation, The EUT was placed on three different polar directions; i.e. X axis, Y axis, Z axis. which only the worst case was shown in this test report and defined as follows:

| Axis                   | X     | Y     | Z     |
|------------------------|-------|-------|-------|
| Field Strength(dBuV/m) | 76.15 | 76.29 | 75.96 |

## 5.3 Description of Support Units

None.

## 5.4 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

- **FCC —Registration No.: 381383**

Global United Technology Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in files. Registration 381383, January 08, 2018.

- **Industry Canada (IC) —Registration No.: 9079A-2**

The 3m Semi-anechoic chamber of Global United Technology Services Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 9079A-2, August 15, 2016

## 5.5 Test Location

All tests were performed at:

Global United Technology Services Co., Ltd.  
No. 301-309, 3/F., Jinyuan Business Building, No.2, Laodong Industrial Zone,  
Xixiang Road, Baoan District, Shenzhen, Guangdong, China  
Tel: 0755-27798480  
Fax: 0755-27798960

## 5.6 Other Information Requested by the Customer

None.

| <p>Test Procedure:</p>   | <ol style="list-style-type: none"> <li>1. The EUT was placed on the top of a rotating table (0.8 meters for below 1GHz and 1.5 meters for above 1GHz) above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation.</li> <li>2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.</li> <li>3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</li> <li>4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading.</li> <li>5. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</li> <li>6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.</li> </ol> |
| <p>Test Instruments:</p> | <p>Refer to section 6.0 for details</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <p>Test results:</p>     | <p>Pass</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

**Measurement data:**

**7.2.1 Field Strength of The Fundamental Signal**

**Peak value:**

| Frequency (MHz) | Read Level (dBuV) | Antenna Factor (dB/m) | Cable Loss (dB) | Preamp Factor (dB) | Level (dBuV/m) | Limit Line (dBuV/m) | Over Limit (dB) | polarization |
|-----------------|-------------------|-----------------------|-----------------|--------------------|----------------|---------------------|-----------------|--------------|
| 304.00          | 94.81             | 13.68                 | 2.38            | 37.42              | 73.45          | 94.94               | -21.49          | Horizontal   |
| 304.00          | 97.65             | 13.68                 | 2.38            | 37.42              | 76.29          | 94.94               | -18.65          | Vertical     |

*Remark: Final Level = Receiver Read level + Antenna Factor + Cable Loss – Preamplifier Factor*

**Average value:**

| Frequency (MHz) | Peak Value (dBuV/m) | Average factor | Average value (dBuV/m) | Limit Line (dBuV/m) | Polarization |
|-----------------|---------------------|----------------|------------------------|---------------------|--------------|
| 304.00          | 73.45               | -14            | 59.45                  | 74.94               | Horizontal   |
| 304.00          | 76.29               | -14            | 62.29                  | 74.94               | Vertical     |

*Remark: Average value = Peak value + Duty cycle factor*

## 7.2.2 Spurious Emissions

### Measurement data:

#### 9 kHz ~ 30 MHz

The low frequency, which started from 9 kHz to 30 MHz, was pre-scanned and the result which was 20 dB lower than the limit line per 15.31(o) was not reported.

#### Below 1GHz:

### Remark:

1. *Final Level = Receiver Read level + Antenna Factor + Cable Loss – Preamplifier Factor*
2. *Average value = Peak value + Duty cycle factor*

## 7.3 20dB Occupy Bandwidth

|                   |                                                                                                                                                                                                                                                                                                                             |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Test Requirement: | FCC Part15 C Section 15.231 (c)                                                                                                                                                                                                                                                                                             |
| Test Method:      | ANSI C63.10:2013                                                                                                                                                                                                                                                                                                            |
| Limit:            | The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier. |
| Test setup:       |                                                                                                                                                                                                                                          |
| Test Instruments: | Refer to section 6.0 for details                                                                                                                                                                                                                                                                                            |
| Test mode:        | Refer to section 5.2 for details                                                                                                                                                                                                                                                                                            |
| Test results:     | Pass                                                                                                                                                                                                                                                                                                                        |

### Measurement Data

| Test Frequency (MHz) | 20dB bandwidth (MHz) | Limit (MHz) | Result |
|----------------------|----------------------|-------------|--------|
| 304.00               | 0.185                | 0.76        | Pass   |

Note: Limit= Fundamental frequency×0.25%=304×0.25%=0.76MHz

Test plot as follows:

## 7.4 Dwell Time

|                   |                                                                                    |

| Test Method:      | ANSI C63.10:2013                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Receiver setup:   | RBW=100KHz, VBW=300KHz, span=0Hz, detector: Peak                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Limit:            | No dedicated limit specified in the Rules.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Test Procedure:   | <ol style="list-style-type: none"> <li>1. Place the EUT on the table and set it in transmitting mode.</li> <li>2. Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the spectrum analyzer.</li> <li>3. Set centre frequency of spectrum analyzer=operating frequency.</li> <li>4. Set the spectrum analyzer as RBW=100kHz, VBW=100KHz, Span=0Hz, Adjust Sweep=100ms to obtain the "worst-case" pulse on time</li> <li>5. Repeat above procedures until all frequency measured was complete.</li> </ol> |
| Test setup:       |  <p>The diagram illustrates the test setup. A Spectrum Analyzer is connected to an E.U.T. (Equipment Under Test) via a red cable. Both the Spectrum Analyzer and the E.U.T. are placed on a Non-Conducted Table. The table is supported by two vertical legs and sits on a Ground Reference Plane, which is represented by a thick grey bar at the bottom.</p>                                                                                                  |
| Test Instruments: | Refer to section 6.0 for details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Test mode:        | Refer to section 5.2 for details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Test results:     | Pass                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

### Measurement data:

$$T_p = 52.575 + 14.018 = 66.593 \text{ ms}$$

$$T_{on} = 0.7916 \times 11 + 0.38076 \times 12 = 8.708 + 4.572 = 13.28 \text{ ms}$$

$$(0.7916 \times 11 + 0.38076 \times 12 = 8.708 + 4.572 = 13.28) / (52.575 + 14.018 = 66.593)$$

$$\text{Duty cycle} = T_{on} / T_p = 13.28 / 66.593 = 19.94\%$$

$$\text{Duty cycle factor} = 20 * \log (\text{duty cycle}) = 20 * \log (0.1994) = -14 \text{ dB}$$
