Display Unit Owner's Manual

GABI04

Owner's Manual Use Case

NFC technology will allow customers to pair their mobile devices to the vehicle infotainment system (over Bluetooth) by just holding their device near the Integrated Center Stack Display.

"Mobile device" refers to any device that supports both Bluetooth and the full NFC specification. This means it could include a phone, tablet or NFC tag, e.g. the Nexus 10. Some smart phones (e.g. iPhone 6) will not support the feature because they do not support the full NFC specification.

There is a target with a special NFC logo that directs the customer where to hold the phone/tablet/NFC tag. The mobile device can be up to 4cm away. In practice, this means about an inch away from the Instrument Panel.

NFC capability needs to be enabled on the device. Other than that, it depends on the device, but for devices we are aware of, the device does not need to be on a specific screen or anything to perform the "tap" and start the pairing process, but the device will then pop a message up for the user to confirm in order for the process to be completed.

Frequency Band / Maximum transmission output

- Frequency Band : 13.553-13.567MHz
- The maximum transmission output : 20.37dBuV/m@30 m

Russia, Kazakhstan , Belarus, Kyrgyzstan, Armenia	 Product name: Display Unit / GABI04 Company name: ALPINE ELECTRONICS, INC. Made in China, Mexico Where to call: ALPINE ELECTRONICS, INC. 20-1 Yoshima-Industrial Park, Iwaki, Fukushima 970-1192, Japan Local Representative:TBD Purpose of use: Display Unit for Car Regulations and safety guidelines: Changing the frequency without permission (including additional radio frequency amplifier) must not increase transmission output. In addition, attaching an antenna without permission must not change other outgoing antennas. During use, for each type of legal wireless communication operation, harmful interference must not be produced. If an interference phenomenon is discovered, cease operation immediately. Continued use will be enabled once interference removal measures are taken. When faint wireless equipment is used, interference of each type of wireless operation or radiation interference of industrial, scientific, or medical applied equipment must be accepted.
United States of America	FCC CAUTION Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
Canada	This device contains licence-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada's licence-exempt RSS(s). Operation is subject to the following two conditions: 1. This device may not cause interference. 2. This device must accept any interference, including interference that may cause undesired operation of the device. L' émetteur/récepteur exempt de licence contenu dans le présent appareil est conforme aux CNR d' Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence. L' exploitation est autorisée aux deux conditions suivantes : 1. L' appareil ne doit pas produire de brouillage; 2. L' appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d' en compromettre le fonctionnement.

	Data transmission is always initiated by software, which is then passed down through the MAC, through the digital and analog baseband, and finally to the RF chip. Several special packets are initiated by the MAC. These are the only ways the digital baseband portion will turn on the RF transmitter, which it then turns off at the end of the packet. Therefore, the transmitter will be on only while one of the aforementioned packets is being transmitted. In other words, this device automatically discontinues transmission in case of either absence of information to transmit or operational failure. La transmission des données est toujours initiée par le logiciel, puis les données sont transmises par l'intermédiaire du MAC, par la bande de base numérique et analogique et, enfin, à la puce RF. Plusieurs paquets spéciaux sont initiés par le MAC. Ce sont les seuls moyens pour qu'une partie de la bande de base numérique active l'émetteur RF, puis désactive celui-ci à la fin du paquet. En conséquence, l'émetteur reste uniquement activé lors de la transmission d'un des paquets susmentionnés. En d'autres termes, ce dispositif interrompt automatiquement toute transmission en cas d'absence d'information à transmettre ou de défaillance.
