Safety Instructions: Dell™ 1501FP Flat Panel Color Monitor User's Guide

⚠ WARNING: Use of controls, adjustments, or procedures other than those specified in this documentation may result in exposure to shock, electrical hazards, and/or mechanical hazards.

Read and follow these instructions when connecting and using your computer monitor:

- To help avoid damaging your computer, be sure that the voltage selection switch on the power supply is set to match the alternating current (AC) power available at your location:
 - 115 volts (V)/60 hertz (Hz) in most of North and South America and some Far Eastern countries such as Japan, South Korea, and Taiwan.
 - 230 V/50 Hz in most of Europe, the Middle East, and the Far East

Also be sure that your monitor is electrically rated to operate with the AC power available in your location.

- Never insert anything metallic into the monitor openings. Doing so may create the danger of electric shock.
- To avoid electric shock, never touch the inside of the monitor. Only a qualified technician should open the monitor's case.
- Never use your monitor if the power cable has been damaged. Do not allow anything to rest on the power cable, and keep the cable away from where people could trip over it.
- Be sure to hold the plug, not the cable, when disconnecting the monitor from an electric socket.
- Openings in the monitor cabinet are provided for ventilation. To prevent overheating, these openings should not be blocked or covered. Also, avoid using the monitor on a bed, sofa, rug, or other soft surface. Doing so may block the ventilation openings in the bottom of the cabinet. If you put the monitor in a bookcase or some other enclosed space, be sure to provide adequate ventilation.
- Put your monitor in a location with low humidity and a minimum of dust. Avoid places like damp basement or dusty hallways.
- Do not expose the monitor to rain or use it near water (in kitchens, next to swimming pools, etc.). If the monitor accidentally gets wet, unplug it and contact an authorized dealer immediately. You can clean the monitor with a damp cloth when necessary, but be sure to unplug the monitor first.
- Place the monitor on a solid surface and treat it carefully. The screen is made of glass and can be damaged if dropped or sharply hit.
- Locate your monitor near an easily accessible electric outlet.
- If your monitor does not operate normally - in particular, if there are any unusual

- sounds or smells coming from it - unplug it immediately and contact an authorized dealer or service center.**
- **High temperatures can cause problems. Don't use your monitor in direct sunlight, and keep it away from heaters, stoves, fireplaces, and other sources of heat.**
 - **Unplug the monitor when it is going to be left unused for an extended period of time.**
 - **Unplug your monitor from the electric outlet before any service.**

Monitor Specific Troubleshooting

Self-Test Feature Check (STFC)

Your monitor provides a self-test feature that allows you to check whether your monitor is functioning properly. If your monitor and computer are properly connected but the monitor screen remains dark, run the monitor self-test by performing the following steps:

1. Turn off both your computer and the monitor.
2. Unplug the video cable from the back of the computer.
3. Turn on the monitor.

If the monitor is functioning properly, you will see a message box with a RGB color and black text inside, as shown in the following illustration:

This box also appears during normal system operation if the video cable becomes disconnected or damaged.

1. Turn off your monitor and reconnect the video cable; then turn on both your computer and the monitor.
2. While in self-test mode, the LED remains green and the pattern remains on and stationary.

If your monitor screen remains blank after you use the previous procedure, check your video controller and computer system; your monitor is functioning properly.

Common Problems

The following table contains general information about common monitor problems you might encounter.

COMMON SYMPTOMS	WHAT YOU SEE	POSSIBLE SOLUTIONS
No Video / LED Off	No picture, monitor looks dead.	• Check connection integrity • Electric outlet verification • Ensure power button depressed fully
No Video / LED On	No picture or no brightness	• Increase brightness & contrast controls • Perform monitor self test feature check • Check for bent or broken pins
Poor Focus	Picture is fuzzy, blurry or ghosting	• Eliminate video extension cables • Perform monitor reset • Decrease brightness & contrast controls • Lower video resolution or increase font size
Shaky/Jittery Video	Wavy picture or fine movement	• Perform monitor reset • Check environmental factors • Relocate and test in other room
Missing Pixels	Screen has spots, specs or blemishes on the screen	• Dots that remain dark are characteristic of the liquid crystal used in today's technology • If the blemish is on the surface of the screen, try cleaning the monitor screen (See Maintenance for cleaning instructions)
Brightness Problems	Picture too dim or	• Adjust the Contrast setting.

Brightness Problems	too bright	Adjust the Contrast setting. (For Analog Input only) • Adjust the <u>Brightness</u> setting. • The backlight of the LCD monitor has a fixed life span. When the screen becomes dark or begins to flicker, please contact your dealer.
Horizontal/Vertical Lines	Screen has one or more lines	• Perform monitor self test feature check • Check for bent or broken pins • Horizontal lines could be damper wires
Sync Problems	Screen is scrambled or appears torn	• Perform monitor self test feature check • Check for bent or broken pins • Boot up in the "safe mode"
Flat Panel Scratched	Screen has scratches or smudges	• Turn monitor off and clean the screen (See <u>Maintenance</u> for cleaning instructions)
Safety Related Issues	Visible signs of smoke or sparks	• Do not perform any troubleshooting steps • Monitor needs to be replaced
Intermittent Problems	Monitor malfunctions on & off	• Ensure monitor is in proper video mode • Perform monitor reset • Perform monitor self test feature check

PRODUCT SPECIFIC SYMPTOMS

SPECIFIC SYMPTOMS	POSSIBLE SOLUTIONS
Picture presents but with blinking LED	• This blinking LED means that the input video mode is either not in the factory <u>Preset Display Modes</u> or user modes. • There is no hardware problem at all, but just a reminder to adjust the monitor with the preferred monitor <u>Resolution</u> for best quality.
"NO VIDEO INPUT" appears	• Make sure the monitor cable is properly connected to your computer.

	• Check to see if the monitor cable has bent pins. • Make sure the computer is turned on. • Increase the brightness and contrast levels to maximize settings. • The message appears when the flat panel power save is set to off and the computer is in a power save mode.
AUTO button not working properly	• The AUTO function is designed for use on standard Macintosh or IBM-compatible PC running Microsoft Windows. • It may not work properly if using nonstandard PC or video card.
Display position is incorrect	• Push the AUTO button. • Adjust the image position using the <u>Adjust Position</u> in OSD menu system.
Image vibrates on the screen	• Check that the signal cable is properly connected to the graphics board or PC.
Vertical flicker appears (for analog input only)	• Push the AUTO button. • Eliminate the vertical bars using the <u>Clock Adjustment</u> under <u>Video Noise</u> in OSD menu system.
Horizontal flicker appears (for analog input only)	• Push the AUTO button. • Eliminate the vertical bars using the <u>Phase Adjustment</u> under <u>Video Noise</u> in OSD menu system.
An afterimage appears	• If an image remains in the screen for an extended period of time, it may be imprinted in the screen and leave an afterimage. This usually disappears after a few hours.
An afterimage remains after the power has been turned off	• This is characteristic of liquid crystal and is not caused by a malfunction or deterioration of the liquid crystal. The afterimage will disappear after

	a set amount of time.
Green, red, blue, dark and white dots remain on the screen	• The remaining dots are normal characteristic of the liquid crystal used in today's technology.

General

Model number 1501FP

Flat Panel

Screen type	active matrix — TFT LCD
Screen dimensions	15 inches / 15.1 inches
Preset display area:	
Horizontal	304.1 mm (11.97 inches)
Vertical	228.1 mm (8.98 inches)
Pixel pitch	0.297 x 0.297 mm / 0.300 x 0.300 mm
Viewing angle	±60° (vertical) ±70° (horizontal)
Luminance output	200 CD/m ²
Contrast ratio	200 to 1
Faceplate coating	Anti-glare with hard coating 2H
Backlight	CCFL edgelight system

Resolution

Horizontal scan range	30 kHz to 61 kHz (automatic)
Vertical scan range	56 Hz to 75 Hz (automatic)
Optimal preset resolution	1024 x 768 at 60 Hz
Highest preset resolution	1024 x 768 at 75 Hz
Highest addressable resolution*	1024 x 768 at 75 Hz

Electrical

Video input signals	analog, 0.7 Vpp, positive at 75 ohm
Synchronization input signals	separate horizontal and vertical; TTL level, positive or negative
AC input voltage / frequency / current	90 to 264 VAC / 50 or 60 Hz $\pm$ 3 Hz / 1.2 A (RMS) at 120 VAC and 0.6 A (RMS) at 220 VAC
Inrush current at 120 V	30 A
Inrush current at 240 V	60 A

**Physical
Characteristics**

Connector type	DVI-D, 15-pin D-subminiature (Optional)
Signal cable type	Detachable
Dimensions:	
Height	400 mm (15.7 inches)
Width	386.4 mm (15.2 inches)
Depth	179.8 mm (7.1 inches)
Weight (monitor only)	5.7 kg (12.5 lb)
Weight (with packaging)	7.2 kg (16.1 lb)

Environmental

Temperature:

Operating	5° to 35°C (41° to 95°F)
Non-operating	–20° to 60°C (–43° to 140°F)

Humidity:

Operating	80% max. (non-condensing)
Non-operating	95% max. (non-condensing)

Altitude:

Operating	3,576 m (12,000 ft)
Non-operating	12,192 m (40,000 ft)

Thermal dissipation	XXX BTU/hour (maximum)
	XXX BTU/hour (typical)

Power Management Modes

If you have VESA's DPMS compliance display card or software installed in your PC, the monitor can automatically reduce its power consumption when not in use. If input from keyboard, mouse or other input devices is detected, the monitor will automatically "wake up". The following table shows the power consumption and signaling of this automatic power saving feature:

Power Management Definition					
VESA's Mode	Video	H-sync	V-sync	Power Used	LED color
ON	Active	Yes	Yes	maximum 38W typical 30W	Green
Stand-by	Blanked	No	Yes	Less than 5W	Amber
Suspend	Blanked	Yes	No	Less than 5W	Amber
Active-OFF*	Blanked	No	No	Less than 5W	Amber

This monitor is ENERGY STAR®-compliant and TCO'99 power management compatible.

Plug and Play Capability

You can install the monitor in any Plug and Play-compatible system. The monitor automatically provides the computer system with its Extended Display Identification Data (EDID) using Display Data Channel (DDC) protocols so the system can configure itself and optimize the monitor settings. If desired, the user can select different settings, but in most cases monitor installation is automatic.

Cadmium

Cadmium is present in rechargeable batteries and in the colour-generating layers of certain computer displays. Cadmium damages the nervous system and is toxic in high doses. The relevant TCO'99 requirement states that batteries, the colour-generating layers of display screens and the electrical or electronics components must not contain any cadmium.

Mercury is sometimes found in batteries, relays and switches. It damages the nervous system and is toxic in high doses. The relevant TCO'99 requirement states that batteries may not contain any mercury. It also demands that mercury is not present in any of the electrical or electronics components associated with the labelled unit.

CFCs and HCFCs

The relevant TCO'99 requirement states that neither CFCs nor HCFCs may be used during the manufacture and assembly of the product. CFCs (freons) are sometimes used for washing printed circuit boards. CFCs break down ozone and thereby damage the ozone layer in the stratosphere, causing increased reception on earth of ultraviolet light with e.g. increased risks of skin cancer (malignant melanoma) as a consequence.

Lead can be found in picture tubes, display screens, solders and capacitors. Lead damages the nervous system and in higher doses, causes lead poisoning. The relevant TCO'99 requirement permits the inclusion of lead since no replacement has yet been developed.

* *Bio-accumulative is defined as substances which accumulate within living organisms*

** *Lead, Cadmium and Mercury are heavy metals which are Bio-accumulative.*

Energy Efficiency

The proper operation of the function requires a computer with VESA® DPMS power management capabilities. When used with a computer equipped with VESA DPMS, the monitor is ENERGY STAR®-compliant.

As an ENERGY STAR® Partner, Dell Computer Corporation has determined that this product meets the ENERGY STAR® guidelines for energy efficiency.

Federal Communications Commission (FCC) Notice (U.S. Only)

⚠ WARNING: This equipment has been tested and found to comply with the limits

for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received including interference that may cause undesired operation.

Instructions to Users: This equipment complies with the requirements of FCC (Federal Communication Commission) equipment provided that following conditions are met.

1. I/F Cable : Shielded I/F cable must be used.
2. Video inputs: The input signal amplitude must not exceed the specified level.

 **CAUTION:** Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
