Hi Jenny,

Please address following issues.

1. regarding AC line conducted emission test. Please explain why in FM transmitter report, AC Line conducted test is not required?
<Feel> AC travel adapter cannot use at the same time with FM antenna. So The FM transmitter uses DC battery when FM transmitter is operated
2. Please also point FM transmitter from the internal photos.
<Feel> Pls. refer to internal photos (Rev2)
3. As for the antenna connector type, per the updated photo, is it USB type?
<Feel> The antenna is special type (**micro** USB type).
So it's not connected with neither normal USB connector and mini USB connector.

Best Regards,

Lucy Tsai
