Temperature [] :	25.5	25.5
Humidity [%] :	22	22
Power supply :	AC120V/60Hz	AC120V/60Hz

2.2 Justification

The system was configured in typical fashion(as a customer would normally use it) for testing.

2.3 EUT Exercise Soft ware

The EUT exercise program used during radiated and conducted testing was ping and ADSL modem was simulated through ADSL DSRAM equipment.
ADSL DSRAM equipment can simulate and monitor to ADSL modem.

2.4 Test Procedure

2.4.1 Conducted Emissions

EUT was placed on a platform of nominal size, 1m by 1.5m, raised 80cm above the conducting ground plane. The rear of tabletop was located 40cm to the vertical conducting ground plane.

The rear of EUT, including peripherals was aligned and flush with rear of tabletop. All other surfaces of tabletop was at least 80cm from any other grounded conducting surface. I/O cables and AC cables that were connected to the peripherals were bundled in center. They were folded back and forth forming a bundle 30cm to 40cm long and were hanged at a 40cm height to the ground plane.

Each EUT current-carrying power lead, except the ground(safety) lead, were individually connected through a LISN to the input power source.

All unused 50 ohm connectors of the LISN were resistively terminated in 50 ohm when not connected to the measuring equipment.

2.4.2 Radiated Emissions

EUT was placed on a platform of nominal size, 1m by 1.5m, raised 80cm above the conducting ground plane.

The rear of EUT, including peripherals was aligned and flush with rear of tabletop.

I/O cables that were connected to the peripherals were bundle in center.

They were folded back and forth forming a bundle 30cm to 40cm long and were hanged 40cm height to the ground plane.

Test was made with the antenna positioned in both the horizontal and vertical planes of polarization. The measurement antenna was varied in height above the conducting ground plane to obtain the maximum signal strength.

All data in report are to be traceability to the national or international standards.

4.1 Conducted Emission Test

The measurement uncertainty(with a 95% confidence level)for this test was $\pm 2.08\text{dB}$.

- ☐ The data listed in this test report may exceed the test limit because it does not have enough margin(more than 2.0dB).
- *The data listed in this test report has enough margin, more than 2.08dB.*

4.2 Radiated Emission Test

The measurement uncertainty(with a 95% confidence level)for this test was as follow
30MHz~200MHz : ± 4.50 200MHz~1000MHz : ± 5.23

- ☐ The data listed in this test report may exceed the test limit because it does not have enough margin(more than 2.0dB).
- *The data listed in this test report has enough margin, more than 3.4dB.*

5. Conducted Emission Test Data

The initial step in collecting conducted data was to perform a quasi-peak scan over the measurement range using a spectrum analyzer.

During operating modes, ADSL modem was simulated by ADSL DSRAM equipment like as Ping. Investigated and then the worst-case emission(during execution of ping software) are reported. All other emission are non-significant.

The minimum margin to the limit is as follows :

LISN Loss : 0.32 [dB]
Cable loss : 0.7 [dB]
Corrected Readings : 33.72 [dBuV/m]
