Dear Hyun-Chae You,

You are listed as the Technical Contact for the above referenced TCB application. The following items need to be resolved before the review can be continued:

1. The FCC ID Label exhibit has a footer at the bottom of the page that shows FCC ID: V4NM893. Please confirm the actual FCC ID and submit a revised label exhibit.
2. The Operational Description exhibit states that rated power is 50mW per channel. Please confirm if this device can generate more than on signal at a time. If more than one signal can be transmitted simultaneously, please address FCC Intermodulation test.
3. The test report documents the power for the PCS band as 20.12 dBm, or 103mW (table incorrectly shows this as 56mW). Please correct the typo in the RF test report and update the rated power in the Operational Description if needed.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.

Best regards,

Chris Harvey
