Re: FCC ID: A3LSGHQ105

Gentlemen:

On behalf of Samsung Electronics Co., Ltd., I am requesting the issuance of a Class II change for the reference equipment. Version 2.2 of this unit was previously certified on June 18, 2001. Subsequent to that approval, Samsung made 3 minor changes to the RF output matching network to improve the matching and reduce the VSWR. These changes resulted in a lowering of the radiated power from 0.703 watts to 0.387 watts. The revised unit is designated as Version 2.3. The previous version has not been marketed or shipped and a letter attesting to that fact from Samsung is included in this filing.

Due to the change in the matching network, new SAR test data has been taken. The new data shows the SAR level for head operation is now 1.53 mw/g. For body operation the SAR level is unchanged, however, the separation distance is now 0.6 cm.

Since compliance was previously shown, but the new data shows that some parameters have degraded, Samsung is requesting the issuance of a Class II permissive change.

Sincerely,

Phillip Inglis
Consultant
