2.2. Equipment Approval Considerations item

Requirement	Device
A) Power transfer frequency is less than 1 MHz.	S-Pen : 530 kHz to 600 kHz
B) Output power from each primary coil is less than or equal to 15 watts.	S-Pen : 0.05 W
C) The transfer system includes only single primary and secondary coils. This includes charging systems that may have multiple primary coils and clients that are able to detect and allow coupling only between individual pairs of coils.	The transfer system includes only single primary and secondary coils. ¹⁾
D) Client device is placed directly in contact with the transmitter.	Yes.
E) Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion)	This device is portable condition. (Refer to PAG)
F) The aggregate H-field strengths at 15 cm surrounding the device and 20 cm above the top surface from all simultaneous transmitting coils are demonstrated to be less than 50% of the MPE limit.	Aggregate fields were measured at distances < 15 cm / 20 cm following FCC guidance provided in a lab KDB enquiry. All measurements are significantly below 50% of the limit.

Note:

1. Coils are included in a FPCB. When the S-pen is attached on the tablet PC, S-pen is located properly through the magnet fixed on tablet PC. Therefore both coils can operated simultaneously (single coil does not operate).

3. RF Exposure

3.1. FCC Regulation

This document is prepared to show compliance with the RF Exposure requirements as required in §1.1310 of the FCC rules and Regulations.

The limit for Maximum Permissible Exposure (MPE), specified in FCC §1.1310, is listed in Table 1-1. According to FCC §1.1310: the criteria listed in the following table shall be used to evaluate the environmental impact of human exposure to radio-frequency (RF) radiation as specified in §1.1307(b).

Table 1 – Limits for Maximum Permissible Exposure (MPE)

Frequency Range (MHz)	Electric Field Strength [V/m]	Magnetic Field Strength [A/m]	Power Density [mW/cm ²]	Averaging Time [minute]
(A) Limits for Occupational / Controlled Exposure				
0.3 ~ 3.0	614	1.63	*100	6
3.0 ~ 30	1842/f	4.89/f	*900/f ²	6
30 ~ 300	61.4	0.163	1.0	6
300 ~ 1 500	/	/	f/300	6
1 500 ~ 15 000	/	/	5	6
(B) Limits for General Population / Uncontrolled Exposure				
0.3 ~ 1.34	614	1.63	*100	30
1.34 ~ 30	824/f	2.19/f	*180/f ²	30

300 ~ 1 500	/	/	f/1 500	30
1 500 ~ 15 000	/	/	1.0	30

f=frequency in MHz, * = plane-wave equivalent power density

3.2. Test Set-up

3.2.1. Isotropic Probe test setup

The measurement probe (EHP-200A) is a regular hexahedron and supports 3-axis (X, Y and Z) isotropic probe.

A: Front of measurement probe

B: Right of measurement probe

C: Rear of measurement probe

D: Left of measurement probe

E: Top of measurement probe

*Bottom of measurement probe is not used to measure RF exposure condition owing to connection with a stick.

In order to demonstrate the probe perturbation is not affecting the measurements,

- For one of the sides of EUT several measurements be made at various distances, starting further away and then moving closer.
 - ✓ Further away: measurement distance of EUT was confirmed until isotropic probe could not read fundamental level anymore (Not detected level).
 - ✓ Moving closer: measurement isotropic probe directly contacts with sides of EUT (0 cm)
 - ✓ When the worst level of EUT's sides is found out, several measurements should be checked through various distance (1 cm step).

At 0 cm distance, measurement isotropic probe was investigated by rotating the probe through various angles for one of the EUT's sides as below.

Measurement Point	A	B	C	D	E
Direction	Front	Right	Rear	Left	Top
Measurement Point	A to B	B to C	C to D	D to A	N/A
Direction	Front to Right	Right to Rear	Rear to Left	Left to Front	-
Measurement Point	A to E	B to E	C to E	D to E	N/A
Direction	Front to Top	Right to Top	Rear to Top	Left to Top	-

When the worst angle among all angles was found, RF exposure measurement should be adjusted from worst angle.

3.2.2. EUT test setup

- 1) Testing was performed with a calibrated field probe.
- 2) Measurement was performed on each side of the EUT as described per below table.

a	b	c	d	e	f
Right	Left	Rear	Front (Display)	Top	Bottom

- 3) Testing was performed at the distances and different battery level as indicated on test result table.

- Test mode

In order to measure H-field of near field in portable condition, we refer to KDB680106 D01. KDB680106 D01 is a guide for evaluating RF exposure and explains how to measure H-field strength for the surface of EUT. In addition that more detail measurement guidance was referred to previous PAG.

We measure H-field level of WPT (Wireless power transfer) from 0 cm (contact) to possible reading distance (Not Detected level) based on EUT's surface.

Measurement Probe	EHP-200A (Manufacturer: Narda)
Measurement Method	Direct measurement
Measurement Distance	Edge of the EUT to the edge of the probe.

- Operational correction factor

The EUT charges of 15 minutes at maximum illumination to full charge. It recharges at maximum illumination when 10% or more of the battery level drop is detected.

Operational correction factor = 15 min / 30 min = 0.5

- Support equipment

Client device	Model	FCC ID
Stylus Pen (S-pen)	EJ-PT870	A3LEJPT870

3.3. Test configuration (worst case configuration and mode)

Worst case configuration is considered when the RF exposure is performed then worst result should be reported as below.

- Condition: AC adaptor

Mode	Case	Description
S-Pen charging mode	1	Tablet condition: Charging with AC adaptor Charging from EUT to S-Pen
	2	Tablet condition: Portable without AC adaptor Charging from EUT to S-Pen

	12	LTE Band 26 + Bluetooth (2.4 GHz) + WLAN (5 GHz) + GNSS
	13	LTE Band 41 + Bluetooth (2.4 GHz) + WLAN (5 GHz) + GNSS
	14	LTE Band 66 + Bluetooth (2.4 GHz) + WLAN (5 GHz) + GNSS

Note:

- The H-field test was conducted while all other wireless technologies/RF communications operating at their under perspective maximum RF output.
- RF Exposure measurement is considered as highest power of each band/channel/RB condition/offset/mode etc.
- **Worst case: Case#1: with AC adaptor / Case#1: GSM 850 + Bluetooth (2.4 GHz) + WLAN (5 GHz) + GNSS**
