3.1 Electromagnetic Emission

RFI Voltage Measurement **PASS**

RFI Field Strength Measurement **PASS**

Although the measured emissions indicate that the EUT complies with the required limits, some measurements are close to these limits. When the uncertainty of measurement is considered, there is some possibility that the EUT may not be compliant.

Test results are traceable to JQA, TELEC and NIST.

3.2 Modifications to The EUT : None

6.2.2 Measurement Procedure

Final test was performed according to ANSI C63.4-1992 at the open field test site No.3. Deviations from the standard was none.

The EUT was placed in a 0.8m high table along with the peripherals. The turn table was separated from the antenna distance 3meters. Cables were placed in a position to produce maximum emissions as determined by experimentation, and operation mode was selected for maximum.

The frequencies and amplitudes of maximum emission were measured at varying azimuths, antenna heights and antenna polarities. Reported are maximized emission levels.

6.2.3 Measurement Uncertainty

Measurement uncertainty of RFI Field Strength Measurement test was estimated at $\pm 2.8\text{dB}(k=2)$.

6.4 Sample Calculation

Table 6.4-1 Sample Calculation

The maximum radiating emission can be obtained at the frequency of 271.18 MHz, Vertical polarization on Test program(Read & Write) operation mode.					
Each value at frequency is as follows;					
R :	Field strength meter reading	=	46.0	(dBμV)	
A :	Antenna factor	=	19.0	(dB/m)	
C :	Cable loss	=	4.8	(dB)	
G :	Amplifier gain	=	27.6	(dB)	
Then radiated emission E(dBμV/m) is ;					
$E = R + A + C - G$					
Therefore, the maximum radiated emission is ;					
				42.7	(dBμV/m)
