

Your telephone operates on standard radio frequencies as allocated by the FCC. Even though the access protection code prevents unauthorized use of your phone line, it is possible for other radio units operating on similar frequencies within a certain area to unintentionally intercept your conversations and/or cause interference. This lack of privacy can occur with any cordless phone.

FCC STATEMENT

Your telephone complies with Part 68 of *FCC Rules*. You must, upon request, provide the FCC registration number and the REN to your telephone company. Both numbers are on the bottom of the telephone's base.

Note: You must not connect your telephone to:

- coin-operated systems
- party-line systems
- most electronic key telephone systems

THE FCC WANTS YOU TO KNOW

In the unlikely event that your phone causes problems on the phone line, the phone company can temporarily discontinue your service. If this happens, the phone company attempts to notify you in advance. If advance notice is not practical, the phone company notifies you as soon as possible and advises you of your right to file a complaint with the FCC.

Also, the phone company can make changes to its lines, equipment, operations, or procedures that could affect the operation of this telephone. The telephone company notifies you of these changes in advance, so you can take the necessary steps to prevent interruption of your telephone service.

This equipment complies with the limits for a Class B digital device as specified in Part 15 of *FCC Rules*. These limits provide reasonable protection against radio and TV interference in a residential area.

However, your equipment might cause TV or radio interference even when it is operating properly. To eliminate interference, you can try one or more of the following corrective measures:

- reorient or relocate the receiving antenna
- increase the distance between the equipment and the radio or TV
- use outlets on different electrical circuits for the equipment and the radio or TV

Consult your local Radio Shack store if the problem still exists.

Warning: Changes or modifications to this phone not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

LIGHTNING

Your telephone has built-in lightning protection to reduce the risk of damage from surges in telephone line and power line current. This lightning protection meets or exceeds FCC requirement. However, lightning striking the telephone or power lines can damage your telephone.

Lightning damage is not common. Nevertheless, if you live in an area that has severe electrical storms, we suggest that you unplug your phone when storms approach to reduce the possibility of damage.

Features

Your RadioShack ET-3507 900 MHz Dual Handset Phone with Caller ID/Call Waiting ID offers the latest advances in cordless phone technology. The corded base and cordless handset operate through one phone jack. It saves up to 35 Caller ID records that you can review and call back using the corded base or cordless handset.

Its other features include:

3-Line Backlit Display — lets you view a caller's name and number both phone's screens.

10-Memory Speed Dial — stores up to 10 frequently called phone numbers for easy dialing.

Call Waiting ID — displays Caller ID information about an incoming call when you are on the phone (if you subscribe to this service from your local phone company).

VIP Memory with Distinctive Ringer — lets you store up to 5 records, complete with a distinctive ring for easy identification.

Three-Way Conference — lets you talk with someone on an outside telephone line and the corded/cordless handset.

Cordless Phone (Base)

Hands-Free Speakerphone — lets you talk on the phone without picking up the handset.

RJ11C Data Port — lets you connect the phone to a computer modem.
