Section 6. Spurious Emissions

Para. No.: 15.247 (c)

Test Performed By: Glen Westwell	Date of Test: 23 Feb. 2004
---	-----------------------------------

Limit: 20dBc (conducted)
Radiated emissions that fall in the restricted bands must comply with 15.209

Test Results: Complies

Note: To achieve the bandedge requirement for emissions falling in the restricted bands, the power at the bandages has been reduced as detailed in section 5 of this report. These power levels will automatically be set via firmware on selection of either bandedge channel #1 or #11 as follows:

Ch. 1, 2412MHz = +13dBm

Ch.11, 2462MHz = +11dBm

Measurement Data: See attached Plots and table.

- Emissions were searched for all possible configurations. Worst case data has been presented.
- The DUT was searched to the 10th harmonic for both the 2.4GHz & 5GHz bands. Only those emissions within 20dB of the limit were reported.
- The power supply source was varied +/-15% to verify worst case emissions.
- Radiated bandedge measurements in the restricted bands were verified using both the 0dBi PIFA antenna and the 5dBi Whip antenna. Worst case data was obtained using the 5dBi Whip antenna and presented in this report.
