

***EMC* EMISSION - TEST REPORT**

JQA APPLICATION No. : KL80010446

Name of Product : 2.4GHz Digital Cordless Telephone(Base Unit)

Model / Type No. : KX-TG2257

FCC ID : ACJ96NKX-TG2257

Applicant : Kyushu Matsushita Electric Co., Ltd.

Address : 1-62, 4-chome, Minoshima, Hakata-ku, Fukuoka 812-8531, Japan

Manufacturer : Kyushu Matsushita Electric Co., Ltd.

Address : 1-62, 4-chome, Minoshima, Hakata-ku, Fukuoka 812-8531, Japan

Receive date of EUT : November 21, 2001

Final Judgement : Passed

TEST RESULTS IN THIS REPORT are obtained in use of equipment that is traceable to National Institute of Advanced Industrial Science and Technology(AIST) under METI Japan and Communications Research Lab.(CRL) under MPHPT Japan.

THE TEST RESULTS only responds to the test sample. This test report shall not be reproduced except in full.

EMC DIVISION

A) Documentation

Directory	<u>2</u>
Test Regulation / General Information	<u>3 - 5</u>
Test Conditions	<u>6 - 12</u>
Configuration of EUT / Operation mode of the EUT	<u>13 - 14</u>
EUT Modification / Responsible Party / Deviation from Standard	<u>15</u>
Test results / Measurement Uncertainty	<u>16 - 18</u>
Summary	<u>19</u>
Test System-Arrangement (Drawings)	<u>20</u>
Preliminary Test and Test-setup (Drawings)	<u>21 - 24</u>
Test-setup (Photographs) at worst case	25

B) Test data

Conducted Emission	450 kHz - 30 MHz	<u>26</u>
Electromagnetic Field Radiated Emission	9 kHz - 25 GHz	<u>27 - 31</u>
Maximum Peak Power (EIRP)		<u>32</u>
Transmitter Power (TP)		<u>33</u>
Calculated Antenna Gain of the EUT		<u>34</u>
Peak Spectral Power Density		<u>35 - 38</u>
Band-edge Emission		<u>39 - 41</u>

TEST REGULATION

FCC Rules and Regulations Part 15 Subpart A and C (February 28, 2001)

- ☐ - Class A Digital Device
- ☐ - Class B Digital Device
- ☒ - Intentional Radiator(Sec.15.247※)
- ☐ - Receiver

※ The proposed rule changes(Sec.15.247) in the FCC ET Docket No. 01-158 is applied to the EUT at request of the applicant.

Test items:

- ☐ - Sec.15.203 : Antenna requirement
- ☒ - Sec.15.205 : Restricted bands of operation
- ☒ - Sec.15.207 : Conducted limits
- ☒ - Sec.15.209 : Radiated emission limits general requirements
- ☐ - Sec.15.214 : Cordless Telephones
- ☒ - Sec.15.247 : Operation within the bands 902-928MHz, 2400-2483.5MHz, 5725-5875MHz, and 24.0-24.25GHz

Test procedure:

Conducted emission and radiated emission test were performed according to the procedures in ANSI C63.4-1992.

GENERAL INFORMATION

Test facility:

- 1) Test Facility located at Kita-Kansai : 1st and 2nd Open Sites (3 m Site)
Test Facility located at Kameoka : 1st Open Site (3, 10 and 30 m, on common plane)
: 2nd Open Site (3 and 10 m, on common plane)

FCC filing No. : 31040/SIT 1300F2

- 2) KITA-KANSAI TESTING CENTER is recognized under the National Voluntary Laboratory Accreditation Program for satisfactory compliance established in Title 15, Part 285 Code of Federal Regulations.
NVLAP Lab Code: 200191-0

- 3) Average Measurement Method
FCC filing No. : 950523A 1300F2

Definitions for symbols used in this test report:

- ☒ - Black box indicates that the listed condition, standard or equipment is applicable for this Report.
- ☐ - Blank box indicates that the listed condition, standard or equipment is not applicable for this Report.

Description of the Equipment Under Test (EUT):

- | | |
|-------------------------------|---|
| 1) Name | : 2.4GHz Digital Cordless Telephone(Base Unit) |
| 2) Model/Type No. | : KX-TG2257 |
| 3) Product Type | : Pre-Production (S/N: ---) |
| 4) Category | : Intentional Radiator |
| 5) EUT Authorization | : ○ - Verification ● - Certification ○ - D.o.C. |
| 6) Transmitting Frequency | : 2402.048 MHz(14ch) - 2479.872 MHz(166ch) |
| 7) Receiving Frequency | : 2402.048 MHz(14ch) - 2479.872 MHz(166ch) |
| 8) Method/System | : Digital Modulation Systems |
| 9) Type of Antenna | : Collinear Antenna |
| 10) Antenna Gain | : 4 dBi |
| 11) Measured MAX Output Power | : 6.6 mW(EIRP) |
| 12) Power Rating | : AC 120V 60Hz 1ϕ 2-pin plug(AC Adaptor : PQLV1) |

Detailed Transmitter portion(Channel plan):

Transmitting frequency : 2402.048 MHz(14ch) - 2479.872 MHz(166ch)
Number of channel : 153
Channel Separation : 512 kHz

Modulation System Information:

Modulation : Digital Modulation
Emission Designator : F1E
Type : TDD-FSK
Deviation : 60 kHz
Bit Rate : 128 Kbps

Time-division duplex(TDD) Frame format:

The TDD frame is 2msec in length, and is composed of two symmetrical 828μsec TX and RX subframe.

Each subframe contains 106 bits of 7.8μsec duration, with 172 μsec gap times between TX and RX subframe.

Digital Security Code : 28bits

Detailed Receiver portion:

Receiving frequency : 2402.048 MHz(14ch) - 2479.872 MHz(166ch)

Local frequency : 2400.768 MHz(14ch) - 2478.592 MHz(166ch)

Intermediate frequency : 1.28 MHz

The used (generated) frequencies in the EUT:

Reference Clock : 8.192 MHz, 106.496 MHz

TEST CONDITIONS

AC Powerline Conducted Emission Measurement(Sec.15.207(a))
was performed in the following test site.

Test location:

KITA-KANSAI Testing Center

7-7, Ishimaru, 1-Chome, Mino-Shi, Osaka, 562-0027, Japan

● - Shielded room

KAMEOKA EMC Branch

9-1, Ozaki, Inukanno, Nishibetsuin-Cho, Kameoka-Shi, Kyoto, 621-0126, Japan

○ - Shielded room

○ - On metal plane of open site

Used test instruments and sites:

Model No.	Device ID	Last Cal. Date	Cal. Interval
○ - ESCS 30	A - 1		
● - ESH 2	A - 2	May, 2001	1 Year
○ - ESH 2	A - 3		
● - KNW-407	D - 6	January, 2001	1 Year
○ - KNW-408	D - 11		
○ - KNW-242	D - 7		
○ - ESH3-Z5	D - 12		
○ - KNW-341C	D - 13		
○ - KNW-408	D - 14		
○ - KNW-244C	D - 77		
○ - KNW-408	D - 78		
○ - ESH2-Z5	D - 10

○ - 4T-10	D - 74		

Environmental conditions:

Temperature: 23 °C Humidity: 48 %

CONFIGURATION OF EUT

The Equipment Under Test (EUT) consists of:

Description	Applicant (Manufacturer)	Model No. (Serial No.)	FCC ID
2.4GHz Digital Cordless Telephone (Base Unit)	Kyushu Matsushita Electric Co., Ltd. (Kyushu Matsushita Electric Co., Ltd.)	KX-TG2257 (--)	ACJ96NKX-TG2257
AC Adaptor	Kyushu Matsushita Electric Co., Ltd. (Kyushu Matsushita Electric Co., Ltd.)	PQLV1 (--)	N/A

The measurement was carried out with the following equipment connected:

Description	Grantee/Distributor	Model No. (Serial No.)	FCC ID
2.4GHz Digital Cordless Telephone (Handset)	Kyushu Matsushita Electric Co., Ltd.	KX-TG2257 (--)	ACJ96NKX-TG2257

Type of Interference Cable(s) and the AC Power Cord used with the EUT:

	Description	Port	Shielded Cable	Shell Material	Ferrite Core	Cable Length
1	EUT	TEL	NO	--	NO	2.0 m
	No termination	--		--		
2	EUT(DC Power Cord)	DC IN	NO	--	NO	1.8 m
	AC Adaptor 1 ϕ -2Pin Plug			--		

Operation - mode of the EUT:

The EUT was operated during the test under the following specification:

- 1)Transmitting (Modulation signal : random digital signal)
- 2)Charging the handset(The handset is set on the base unit.)

For operating condition of the EUT, the typical modulating signal is not used and inputted because the occupied bandwidth of the EUT is subject to restriction due to the bit rate of preamble data other than audio data in the transmitting data .

Test system:

The EUT has two port, one DC IN port and one TEL port.

Special accessories:

None

EUT Modification

- - No modifications were conducted by JQA to achieve compliance to applied levels.
- - To achieve compliance to applied levels, the following change(s) were made by JQA during the compliance test.

— The modification(s) will be implemented in all production models of this equipment. —

Applicant	: N/A	Date	: N/A
Typed Name	: N/A	Position	: N/A

Contact Person :

Signatory

Deviation from Standard

- - No deviations from the standard described in page 3.
- - The following deviations were employed from the standard described in page 3.

TEST RESULTS

AC Powerline Conducted Emission 450 kHz - 30 MHz(Sec.15.207(a))

The requirements are		● - Passed	○ - Not Passed
Min. limit margin	More than	<u>37.1</u> dB at <u>30.00</u> MHz	
Max. limit exceeding		<u> </u> dB at <u> </u> MHz	
Uncertainty of measurement results		<u>+2.1</u> dB(2σ) <u>-2.1</u> dB(2σ)	

Remarks: _____

Electromagnetic Field Radiated Emission 9 kHz - 25 GHz

Maximum Peak Power (EIRP)(Sec.15.247(b)(3))

The requirements are		● - Passed	○ - Not Passed
Maximum Peak Power (EIRP)		<u>6.6</u> mW at <u>2402.048</u> MHz	

Spurious(Sec.15.247(c),15.205(a),15.209(a))

The requirements are		● - Passed	○ - Not Passed
Min. limit margin	More than	<u>11.1</u> dB at <u>19838.976</u> MHz	
Max. limit exceeding		<u> </u> dB at <u> </u> MHz	
Uncertainty of measurement results (≤ 30 MHz)		<u>+ 2.5</u> dB(2σ) <u>- 2.5</u> dB(2σ)	
Uncertainty of measurement results (30 MHz - 1000 MHz)		<u>+ 4.9</u> dB(2σ) <u>- 5.0</u> dB(2σ)	
Uncertainty of measurement results (≥ 1000 MHz)		<u>+ 3.1</u> dB(2σ) <u>- 3.2</u> dB(2σ)	

Remarks: _____

Transmitter Power(TP)(Sec.15.247(b)(3))

The requirements are	● - Passed	○ - Not Passed
The transmitter power is	<u>3.9</u> mW at <u>2402.048</u> MHz	
Min. limit margin	<u>24.1</u> dB at <u>2401.056</u> MHz	
Max. limit exceeding	<u> </u> dB at <u> </u> MHz	
Uncertainty of measurement results	<u>+0.6</u> dB(2σ)	<u>-0.6</u> dB(2σ)

Remarks: _____

Antenna Gain of the EUT(Sec.15.247(b)(4))

The antenna gain is 2.3 dBi at 2402.048 MHz

Remarks: _____

Peak Power Spectral Density(Sec.15.247(d))

The requirements are	● - Passed	○ - Not Passed
The Peak Power Spectral Density is	<u>1.7</u> dBm at <u>2479.815</u> MHz	
The results	Refer to pages 35 - 38	
Min. limit margin	<u>5.3</u> dB at <u>2479.815</u> MHz	
Max. limit exceeding	<u> </u> dB at <u> </u> MHz	
Uncertainty of measurement results at Frequency	<u>±0.05</u> ppm(2σ)	
Uncertainty of measurement results at Amplitude	<u>±0.6</u> dB(2σ)	

Remarks: _____

Band-edge Emission(Sec.15.247(c))

The requirements are

● - **Passed**

○ - **Not Passed**

The results

SUMMARY

GENERAL REMARKS :

The EUT was tested according to the requirements of FCC Rules and Regulations Part 15 Subpart A and C (February 28, 2001)* under the test configuration, as shown in page 20.

※ However, the proposed rule changes(Sec.15.247) in the FCC ET Docket No. 01-158 is applied to the EUT at request of the applicant.

The conclusion for the test items of which are required by the applied regulation is indicated under the final judgement.

FINAL JUDGEMENT :

The "as received" sample;

- - fulfill the test requirements of the regulation mentioned on page 3.
- - fulfill the test requirements of the regulation mentioned on page 3, but with certain qualifications.
- - doesn't fulfill the test regulation mentioned on page 3.

Begin of testing : November 30, 2001

End of testing : December 5, 2001

Test System-Arrangement (Drawings)

Note) * : No termination

Preliminary Test and Test-setup(Drawings)

AC Powerline Conducted Emission 450 kHz - 30 MHz:

The preliminary test was performed according to the description of ANSI C63.4-1992 Sec.7.2.3 (Preliminary AC Powerline Conducted Emissions Tests) and Sec.6.2.1 (Tabletop Equipment Tests). The preliminary test was carried out to investigate the frequency of the emission that has the highest amplitude relative to the limits within normal operating modes, cable positions, and a typical system configuration. In order to find out to the maximum emission, the preliminary test and a final test were performed in accordance with the following steps.

Step 1: One operation mode of the test system was setting.

Step 2: Using both of a spectrum analyzer and a test receiver, the emission's circumstance from the system was monitored in one of ten divided frequency bands of the specified frequency range (450 kHz - 30 MHz). The maximum emission in the band was found by changing the typical cable positions or cable manipulation under a typical system configuration and by selecting of current-carrying conductor. The level and the frequency at the one point which are regarded as relative high emission in the band was measured and recorded. This step was repeated until the ending frequency band.

Step 3: Return to step 1, if the other operation mode was possible to be setting.

Step 4: Based on the collected results, the operation mode produced the maximum emission was selected. The final test on the selected operation mode was performed. But if it was difficult to select the operation mode, the final tests on all operation modes were performed.

Step 5: Based on the same data, as result if the final measurement, at the worst point that has the highest amplitude relative to the limit the repeatability of the worst was reconfirmed.

The photographs of the test system setup on the worst point were taken and recorded.

Radiated Emission (Magnetic Field) 9 kHz - 30 MHz:

The preliminary test was performed according to the description of ANSI C63.4-1992 Sec.8.3.1.1 (Preliminary Radiated Emissions Tests) and Sec.6.2.1 (Tabletop Equipment Tests).

The preliminary test was carried out to investigate the frequency of the emission that has the highest amplitude relative to the limits within normal operating modes, cable positions, and a typical system configuration. In order to find out to the maximum emission, the preliminary test and a final test were performed in accordance with the following steps.

Step 1: One operation mode of the test system was setting.

Step 2: In order to investigate the frequencies of maximum emissions, the loop antenna position was approached to the EUT and the significant frequency of the emission's circumstance from the test system were investigated. These data were recorded in the specified frequency band (9 kHz - 30 MHz).

Step 3: Using a test receiver and a loop antenna, the emission's circumstance from the test system was measured in according with ANSI C63.4-1992 Sec.8.3.1.2 (Final Radiated Emissions Tests) at each frequency which was found the higher emission referred to level vs. frequency on the list and which was measured by the loop antenna. The maximum emission was found by changing the antenna angle under a typical system configuration.

Step 4: Return to step 1, if the other operation mode was possible to be setting.

Step 5: The worst result was reported arranging data of which was obtained and performed by one or plural operation modes as the final test.

At the worst point that has the highest amplitude relative to the limit the repeatability of the level was reconfirmed. The photographs of the tests system setup on the worst point were taken and recorded.

Electromagnetic Field Radiated Emission 30 MHz - 1000 MHz:

The preliminary test was performed according to the description of ANSI C63.4-1992 Sec.8.3.1.1 (Preliminary Radiated Emissions Tests) and Sec.6.2.1 (Tabletop Equipment Tests).

The preliminary test was carried out to investigate the frequency of the emission that has the highest amplitude relative to the limits within normal operating modes, cable positions, and a typical system configuration. In order to find out to the maximum emission, the preliminary test and a final test were performed in accordance with the following steps.

Step 1: One operation mode of the test system was setting.

Step 2: Using a test receiver and a test antenna probe, the significant frequency of the emission's circumstance from the test system were investigated. These data were recorded every one of 22 divided bands in the specified frequency band (30 MHz - 1000 MHz).

Step 3: Using a test receiver and a resonant tuned dipole antenna, the emission's circumstance from the test system was measured in according with ANSI C63.4-1992 Sec.8.3.1.2 (Final Radiated Emissions Tests) at each frequency which was found the higher emission referred to level vs. frequency on the list and which was measured by the resonant tuned dipole antenna. The maximum emission was found by changing the antenna angle under a typical system configuration.

Step 4: Return to step 1, if the other operation mode was possible to be setting.

Step 5: The worst result was reported arranging data of which was obtained and performed by one or plural operation modes as the final test.

At the worst point that has the highest amplitude relative to the limit the repeatability of the level was reconfirmed. The photographs of the tests system setup on the the worst point were taken and recorded.

Electromagnetic Field Radiated Emission 1 GHz - 25 GHz:

The preliminary test was performed according to the description of ANSI C63.4-1992 Sec.8.3.1.1 (Preliminary Radiated Emissions Tests) and Sec.6.2.1 (Tabletop Equipment Tests).

The preliminary test was carried out to investigate the frequency of the emission that has the highest amplitude relative to the limits within normal operating modes, cable positions, and a typical system configuration. In order to find out to the maximum emission, the preliminary test and a final test were performed in accordance with the following steps.

Step 1: One operation mode of the test system was setting.

Step 2: In order to investigate the frequencies of maximum emissions, the horn antenna position was approached to the EUT and the significant frequency of the emission's circumstance from the test system were investigated. These data were recorded in the specified frequency band (1 GHz - 25 GHz).

Step 3: The emission's circumstance from the test system was measured in accordance with ANSI C63.4-1992, Sec.8.3.1.2 (Final Radiated Emissions Tests) at each frequency which was found higher emission referred to level vs. frequency on the list and which was measured in the specified distance using the horn antenna. The maximum emission was found by changing the antenna angle under a typical system configuration.

Step 4: Return to step 1, if the other operation mode was possible to be setting.

Step 5: The worst result was reported arranging data of which was obtained and performed by one or plural operation modes as the final test.

At the worst point that has the highest amplitude relative to the limit the repeatability of the level was reconfirmed. The photographs of the tests system setup on the worst point were taken and recorded.

Spectrum Analyzer Setting:

Detector	*)Peak / Average
RES BW	1 MHz
VIDEO BW	1 MHz
SPAN	0 Hz

Test Receiver Setting:

SCALE	LINEAR	LINEAR
I.F.B.W.	1 MHz	1 MHz
Detector	Average	Peak

*) For the average measurement, it is made using a test receiver and a step attenuator.

2440.960	21.5	10.8	68.0	70.0	100.3	102.3	A
2479.872	21.4	10.8	67.0	69.0	99.2	101.2	A

Note : 1. The correction factor includes the attenuator loss and the cable loss.

Remarks:

Note 2	Detector Function	RES. B.W	V.B.W	Sweep T	Span
A	Peak	1 MHz	3 MHz	20 msec	0 Hz

Calculated Results:

CH No.	Frequency (MHz)	Maximum Peak Power EIRP(mW)	
		Hori.	Vert.
14	2402.048	3.3	6.6
90	2440.960	3.2	5.1
166	2479.872	2.5	4.0

The EUT is placed at 3m away from the receiving antenna and the EIRP is calculated using the following formula:

$$E^2 / (120\pi) = \text{EIRP} / (4\pi d^2) \quad \text{where} \quad \text{EIRP} = P_h G_h, \quad E : \text{Field Strength at } d \text{ (distance) m} [\mu\text{V/m}]$$

$$\text{EIRP} = (dE)^2 / 30 \quad G_h = \text{Substituted Antenna [dBi]}$$

$$\text{EIRP(W)} = (3 \times E(\mu\text{V/m}) \times 10^{-6})^2 / 30 \quad P_h = \text{Input power at the Substituted Antenna [W]}$$

The point shown on “___” is the Maximum Point.

Measurement Results:

CH No.	Frequency (MHz)	Corr. Factor (dB)	Meter Reading (dBm)	Result (dBm)	Result (mW)	Limits (mW)	Margin (dB)	Remarks (Note 2)
14	2402.048	10.8	-4.9	5.9	3.9	1000	+24.1	A
90	2440.960	10.8	-5.2	5.6	3.6	1000	+24.4	A
166	2479.872	10.8	-5.4	5.4	3.5	1000	+24.6	A

Sample of calculated result at 2402.048 MHz, as the Minimum Margin point:

$$\begin{aligned} \text{Correction Factor} &= 10.8 \text{ dB} \\ +) \text{ Meter Reading} &= -4.9 \text{ dBm} \\ \hline \text{Result} &= 5.9 \text{ dBm} : 10^{(5.9/10)} = 3.9 \text{ (mW)} \end{aligned}$$

Minimum Margin : $30.0 - 5.9 = 24.1(\text{dB})$

The point shown on "___" is the Minimum Margin Point.

Note : 1. The correction factor includes the attenuator loss and the cable loss.

Remarks:

Note 2	Detector Function	RES. B.W	V.B.W	Sweep T	Span
A	Peak	1 MHz	3 MHz	20 msec	0 Hz

Tester : Shigeru Kinoshita

Calculated Antenna gain of the EUT

Calculated Results:

Antenna gain of the integrated antenna of the EUT : Geut(dB)
Transmitter power (Measured) : TP(dBm)
EIRP (Measured) : EIRP(dBm)

If the antenna gain(Geut) is met the equations as follows.

$$\begin{aligned} \text{EIRP} &= \text{TP} * \text{Geut} \\ \text{Geut(Numric)} &= \text{EIRP} / \text{TP} \\ \text{Geut(dB)} &= 10\log_{10}(\text{EIRP} / \text{TP}) \end{aligned}$$

CH No.	Frequency (MHz)	EIRP (mW)	TP (mW)	Geut (dBi)
14	2402.048	6.6	3.9	2.3
90	2440.960	5.1	3.6	1.5
166	2479.872	4.0	3.5	0.6

Sample of calculated result at 2402.048 MHz, as the Maximum point:

EIRP	=	8.2 dBm = $10\log_{10}(6.6)$
-) TP	=	5.9 dBm = $10\log_{10}(3.9)$
Result	=	2.3 dBi

The point shown on "___" is the Maximum Point.

Peak Power Spectral Density Measurement

Test Date: December 4, 2001
Temp.: 23 °C ; Humi.: 48 %

Measurement Results:

CH No.	Frequency (MHz)	Corr. Factor (dB)	Meter Reading (dBm)	Peak Power Spectral Density (dBm)	Limits (dBm)	Margin (dB)	Attached Garph Page	Remarks (Note 2)
14	2401.988	10.8	-9.2	1.6	8.0	+5.4	page 36	A
90	2440.899	10.8	-9.2	1.6	8.0	+5.4	page 37	A
166	2479.815	10.8	-9.1	1.7	8.0	+5.3	page 38	A

Sample of calculated result at 2479.825 MHz, as the Minimum Margin point:

Correction Factor = 10.8 dB

+) Meter Reading = -9.1 dBm

Result = 1.7 dBm

Minimum Margin : 8.0 - 1.7 = 5.3(dB)

The point shown on "___" is the Minimum Margin Point.

Note : 1. The correction factor includes the attenuator loss and the cable loss.

Remarks:

Note 2	Detector Function	RES. B.W	V.B.W	Sweep T	Span
A	Peak	3 kHz	30kHz	AUTO	1 MHz

Tester : Shigeru Kinoshita
