

1.0 **General Description**

1.1 Product Description

The General Research of Electronics, Inc. Model No.: RP-6120 is a scanning receiver.

Please refer to the attached users manual for more details.

A pre-production version of the sample was received on April 1, 1998 in good condition.

1.2 Related Submittal(s) Grants

This is an Application for Certification of a scanning receiver.

1.3 Test Methodology

Both AC mains line-conducted (if applicable) and radiated emission measurements were performed according to the procedures in ANSI C63.4 (1992). All measurements were performed in Open Area Test Sites. All Radiated tests were performed at an antenna to EUT distance of 3 meters, unless stated otherwise in the **"Data Section"** of this Application.

1.4 Test Facility

The open area test site and conducted measurement facility used to collect the radiated data is Site 3. This test facility and site measurement data have been fully placed on file with the FCC.

2.0 **System Test Configuration**

2.1 Justification

For emission testing, the equipment under test (EUT) was configured for testing in a typical fashion (as a customer would normally use it). During testing, all cables were manipulated to produce worst case emissions.

For the measurements, the EUT is attached to a cardboard box (if necessary) and placed on the wooden turntable. If the EUT attaches to peripherals, they are connected and operational (as typical as possible). The EUT is wired to transmit full power without modulation.

The signal is maximized through rotation and placement in the three orthogonal axes. The antenna height and polarization are varied during the search for maximum signal level. The antenna height is varied from 1 to 4 meters. Detector function is in peak mode. Radiated emissions are taken at three meters unless the signal level is too low for measurement at that distance. If necessary, a pre-amplifier is used and/or the test is conducted at a closer distance.

All readings are extrapolated back to the equivalent three meter reading using inverse scaling with distance if measured at a closer distance.

2.2 EUT Exercising Software

For emissions testing, the units were setup to receive continuously to simplify the measurement methodology. Care was taken to ensure proper power supply voltages during testing.

2.3 Support Equipment List and Description

- a) The FCC ID's for all equipment used in the tested system (included inserted cards, which have grants) are:

Item #	Description	Model No.	Serial No.	FCC ID
2	Sony Headphones	N/A	N/A	N/A
1	Radio Shack AC Power Adapter	273-1662	9615	N/A

- b) Equipment Setup Block Diagram

* = EUT

** = No ferrites on video cable

S = Shielded;

U = Unshielded

F = With Ferrite

2.4 Equipment Modification

Any modifications installed previous to testing by General Research of Electronics Inc. will be incorporated in each production model sold/leased in the United States.

No modifications were installed by Inchcape Testing Services.

3.0 **Emission Results**

AC line conducted emission measurements were performed from 0.45 MHz to 30 MHz. Analyzer resolution is 10 kHz or greater.

Radiated emission measurements were performed from 30 MHz to 5000 MHz. Analyzer resolution is 100 kHz or greater for 30 MHz to 1000 MHz, 1 MHz for > 1000 MHz.

Data is included of the worst case configuration (the configuration which resulted in the highest emission levels). A sample calculation, configuration photographs and data tables of the emissions are included. All measurements were performed with peak detection unless otherwise specified.

3.1 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor, and subtracting the Amplifier Gain (if any) from the measured reading. The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CF - AG + DF$$

where

- FS = Field Strength in $\text{dB}\mu\text{V/m}$
- RA = Receiver Amplitude (including preamplifier) in $\text{dB}\mu\text{V}$
- CF = Cable Attenuation Factor in dB
- AF = Antenna Factor in dB
- AG = Amplifier Gain in dB
- DF = Distance Factor

In the following table(s), the reading shown on the data table reflects the preamplifier gain. An example for the calculations in the following table is as follows:-

$$FS = RR + LF$$

where

- FS = Field Strength in $\text{dB}\mu\text{V/m}$
- RR = RA - AG in $\text{dB}\mu\text{V}$
- LF = CF + AF + DF in dB

Assume a receiver reading of $52.0 \text{ dB}\mu\text{V}$ is obtained. The antenna factor of 7.4 dB and cable factor of 1.6 dB is added. The amplifier gain of 29 dB is subtracted, giving a field strength of $32 \text{ dB}\mu\text{V/m}$. This value in $\text{dB}\mu\text{V/m}$ was converted to its corresponding level in $\mu\text{V/m}$.

RA = $52.0 \text{ dB}\mu\text{V}$	DF = 0 dB
AF = 7.4 dB	RR = $23.0 \text{ dB}\mu\text{V}$
CF = 1.6 dB	LF = 9.0 dB
AG = 29.0 dB	
FS = RR + LF	
FS = $23 + 9 = 32 \text{ dB}\mu\text{V/m}$	

Level in $\mu\text{V/m}$ = Common Antilogarithm $[(32 \text{ dB}\mu\text{V/m})/20] = 39.8 \mu\text{V/m}$

PRODUCT DEVELOPMENT & MANUFACTURING

- 4-2) Band search : 29-54, 108-136.975, 137-148, 148-174, 380-420, 420-450, 450-512, 806-824, 849-869, 894-960MHz
- 4-3) WX : 162.400, 162.425, 162.450, 162.475, 162.500, 162.525, 162.550MHz
- 5 Scanning rate : 25 channels/sec.
- 6 Search rate : 50 channels/sec.
- 7 Frequency and mode display: LCD with back-lighting
- 8 Zeromatic : Activates during search mode
- 9 Audio output : 240m watts
- 10 Speaker : Built-in 36mm 8 ohms dynamic speaker
- 11 Operating Voltage : DC 9 volts "AA" cell x 6pcs.
- 12 Ext. power or charge voltage : DC 9 volts
- 13 Dimension : Approx. 63 (W) x 45 (D) x 150 (H) mm
- 14 Weight : Approx. 260g without antenna and batteries
- 15 Accessory : Rubber antenna, AC-DC adapter, Belt clip, Owner's manual and Frequencies guide
- 16 Memory backup : Capacitor

-20	Charging current :	65mA	50mA
Note: This specification is obtained AC 120V with model 5-2413A power supply without the scanner on after ten hours.			
-21	Memory hold time	10 Hours	1 Hour
-22	Birdies and step frequency: Under discussion when search		
-23	Filter : Monolithic crystal filter for 21.4MHz and ceramic filter for 455kHz		
-24	Antenna impedance : 50 ohms		
-25	Temperature range : Test to specification between: +18°C - +35°C Operate (Need not meet spec.): -10°C - +60°C		
-26	Low BATT indicator :	5.5V	5.5 $\pm$ 0.5V

3. OPERATING CONTROLS AND CONNECTIONS

- 1 Volume control with power switch
- 2 Squelch control
- 3 Keyboard (25 Keys)
- 4 7 digit frequency display by LCD
- 5 3 digit channel indicator by LCD
- 6 Indicator by LCD: FREQUENCY, CHANNEL, SCAN, MANUAL, SEARCH, PROGRAM, PRI,
Ch-FULL, DELAY, LOCK-OUT, ►, ◄, MEM, WX, BANK, LOW BATT,
KEY-LOCK, P-SAVE and ERROR

- 7 BNC type antenna connector
- 8 Earphone jack (D=3.5mm stereo)
- 9 External power jack and charge jack
- 10 Key lock (keyboard)
- 11 Battery compartment for 6 "AA" cells (User service)
- 12 Reset switch

4. FEATURES

- 1 Direct key entry
- 2 200 channels automatic scanning for VHF to UHF band
- 3 20 monitor temporary memory
- 4 Duplicate frequencies indicator by LCD
- 5 "Zeromatic" tuning system
- 6 Pre-programmed Weather frequencies
- 7 Change the direction at the searching by ► (up) or ◄ (down)
- 8 25 channels/sec. scanning rate and 50 steps/sec. searching rate
- 9 2 second scan and search delay
- 10 Manual selection for channel
- 11 Scan mode [cleared channels (000.000 freq.) are not scan]
- 12 Deleting a frequency from a channel or monitor memory
- 13 Direct search
- 14 Program mode
- 15 Key lock for safety
- 16 Key tone
- 17 10 digit channel and frequency display with all function indicators
- 18 LCD backlighting
- 19 Low battery indicator by LCD
- 20 Regulated DC power supply circuit
- 21 Built-in dynamic speaker
- 22 Crystal filter for 1st IF and Ceramic filter for 2nd IF section
- 23 Belt clip attached

IC308	S81337HG-KE		VOLTAGE REGULATOR

1. LOCAL OSC FREQUENCY CALCULATION

-1 MODEL NO. RP-6120 formula for 1st, 2nd and 3rd Local oscillation frequencies are as follow:

RECEIVING BAND	RECEIVING FREQ. (FR) (MHz)	1st LO	2nd LO	3rd LO
		PLL 1 (MHz) VC0 1 or VC0 2	PLL 2 (MHz) VC0 3	(MHz) X' TAL
VHF LO	29.0000- 42.5950	VC0 1 - FR + 257.5	$257.5 + 21.4 = 278.9$	20.945
	42.6000- 43.0000	"	$257.5 - 21.4 = 236.1$	"
	43.0050- 54.0000	"	$257.5 + 21.4 = 278.9$	"
VHF HI	108.0000-174.0000	VC0 1 = FR - 257.5	$257.5 + 21.4 = 278.9$	20.945
UHF LO	380.0000-512.0000	VC0 2 = FR + 257.5	$257.5 - 21.4 = 278.9$	20.945
UHF HI	806.0000-811.0000	VC0 2 = FR - 254.0	$254.0 + 21.4 = 275.4$	20.945
	811.0125-815.2875	VC0 2 = FR - 257.5	$257.5 + 21.4 = 278.9$	"
	815.3000-815.5000	"	$257.5 - 21.4 = 236.1$	"
	815.5125-820.7375	"	$257.5 + 21.4 = 278.9$	"
	820.7500-824.0000	VC0 2 = FR - 260.0	$260.0 - 21.4 = 238.6$	"
	849.0000-869.0000	VC0 2 = FR - 257.5	$257.5 - 21.4 = 278.9$	"
	894.0000-960.0000	"	"	"

RF DENOTES Frequency Received.

-2 Example

RECEIVING BAND	RECEIVING FREQ. (MHz)	1st LO (MHz)	2nd LO (MHz)	3rd LO (MHz)
VHF LO	29	$29 + 257.5 = 286.5$	$257.5 + 21.4 = 278.9$	20.945
	40	$40 + 257.5 = 297.5$	"	"
	50	$50 + 257.5 = 307.5$	"	"
VHF HI	108	$108 - 257.5 = 365.5$	$257.5 + 21.4 = 278.9$	20.945
	146	$146 - 257.5 = 403.5$	"	"
	174	$174 - 257.5 = 431.5$	"	"
UHF LO	380	$380 - 257.5 = 637.5$	$257.5 - 21.4 = 278.9$	20.945
	446	$446 - 257.5 = 703.5$	"	"
	512	$512 - 257.5 = 769.5$	"	"
UHF HI	806	$806 - 254.0 = 552.0$	$254.0 - 21.4 = 275.4$	20.945
	860	$860 - 257.5 = 602.5$	$257.5 - 21.4 = 278.9$	"
	960	$960 - 257.5 = 702.5$	"	"

2. IF FREQUENCY

1st IF: 254MHz/257.5MHz/260MHz

2nd IF: 21.4MHz

3rd IF: 455kHz

9.0 **Instruction Manual**

Attached is a preliminary copy of the Instruction Manual.

This manual will be provided to the end-user with each unit sold/leased in the United States.
