FCC Class II Permissive Change

Date: June 28, 2021

To: Federal Communications Commission
7435 Oakland Mills Road
Columbia, MD 21046-1609

Request for Class II Permissive Change

To Whom It May Concern:

The purpose of this letter is to request a Class II permissive change for the existing grant of certification FCC ID: AK8100224111. The equipment modifications covered by this Class II permissive change are the following:

1. One specific host (Remote controller, model RCR-VH1) is added in this FCC ID as portable device, therefore, SAR testing is performed at this host device. For more details, refer to the submitted SAR test report, its test setup photos and the Operational Description.
2. Each maximum rated RF output power of the module is NOT changed on the existing grants, however, maximum RF output power of the module in this host will be reduced. Hence, additional testing is performed at the module as stand-alone configuration. For more details, refer to the submitted test report for the module, its test setup photos and the Operational Description.

Except for the RF output power setting controlled by its software, there is no hardware modification on the module for the host. Refer to the submitted Operational Description.

Sincerely,

By:
