4 Subject Of Investigation

All testing was performed on the PCG-9W6L referred to as EUT. The EUT carries a pre-certified WLAN module with FCC ID# PD9WM3B2200BG. This test report contains full radiated testing as per FCC15.247 on the EUT with the pre-certified WLAN module. All conducted measurements are covered under *test report# INTEL-031111*.

During the testing process all data rates vs. modes were checked, the worst case was found to be the following; all testing was performed using the following data rates on the highest gain antenna.

802.11b CHANNEL	DATA RATE	POWER (dBm)
2412	1	16
2437	1	16
2462	1	16

802.11g CHANNEL	DATA RATE	POWER (dBm)
2412	6	11
2437	6	11

NOTE:

1. The radiated emissions were done with different settings, using the relevant pre-amplifiers for the relevant frequency ranges. This is the reason that the graphs show different noise levels. In the range between 3 and 25 GHz very short cable connections to the antenna was used to minimize the noise level.

2. All measurements are done in peak mode using an average limit , unless specified with the plots.

Results for the radiated measurements below 30MHz according § 15.33
