2 PRODUCT DESCRIPTION

Model: RM-TP100 (referred to as the EUT in this report) is a Remote Commander.
The clock frequency used in EUT : 20MHz

Frequency characteristics	:	916.5MHz
Number of channels	:	Single
Modulation	:	OOK (On-Off Keyed)
Antenna type	:	Loop
Antenna Gain	:	2.0dBi
Operating Voltage	:	DC 3.3V
Operating temperature	:	0 - 40 deg. C.

***FCC Part15.31 (e)**

The remote commander provides RF module with stable power supply (DC3.3V),
and the power is not changed when voltage of the remote commander is varied.
Therefore, the Remote Commander complies power supply regulation.

***FCC Part15.203**

The remote commander and its antenna comply with this requirement since this antenna is soldered in RF
module directly and it cannot be dismounted by end users.

This is a report of remeasurement that was performed after the remote commander base unit was modified. (The report
of previous measurement: 24FE0244-YK-2)

3 SYSTEM TEST CONFIGURATION

3.1 Justification

The system was configured in typical fashion (as a customer would normally use it) for testing.

Test mode: Transmitting mode
 * Charging operation

4 MEASUREMENT UNCERTAINTY

Conducted emission test

The measurement uncertainty (with a 95% confidence level) for this test was ± 1.3 dB.

The data listed in this test report has enough margin, more than site margin.

Radiated emission test

The measurement uncertainty (with 95% confidence level) for this test using Biconical antenna is ± 4.8 dB.

The measurement uncertainty (with 95% confidence level) for this test using Logperiodic antenna is ± 5.2 dB.

The measurement uncertainty (with 95% confidence level) for this test using Horn antenna is ± 6.6 dB.

The data listed in this report meets the limits unless the uncertainty is taken into consideration.

5 SUMMARY OF TESTS

5.1 §15.207 Conducted Emissions (Limit by CISPR 22)

Test Procedure

EUT was placed on a platform of nominal size, 1m by 1.8m, raised 80cm above the conducting ground plane.

The rear of tabletop was located 40cm to the vertical conducting plane. The rear of EUT, including peripheral was aligned and flushed with rear of tabletop.

All other surfaces of tabletop were at least 80cm from any other grounded conducting surface. EUT was located 80cm from LISN, and excess AC cable was bundled in center. It was folded back and forth forming a bundle 30cm to 40cm long. Each EUT current-carrying power lead, except the ground (safety) lead, was individually connected through a LISN to the input power source.

The AC Mains Terminal Continuous disturbance Voltage has been measured with the EUT on a shielded room.

The EUT was connected to a Line Impedance Stabilization Network (LISN).

An overview sweep with peak detection has been performed.

The measurements have been performed with a quasi-peak detector (IF BW 10kHz).

(Measurement range: 150kHz to 30MHz)

5.2 § 15.249 (a) & (d) Field Strength (Radiated Emissions)

Test Procedure

EUT was placed on a platform of nominal size, 1m by 1.8m, raised 80cm above the conducting ground plane. Test was made with the antenna positioned in both the horizontal and vertical planes of polarization. The measurement antenna was varied in height above the conducting ground plane to obtain the maximum signal strength. The Radiated Electric Field Strength intensity has been measured on an open test site with a ground plane and at a distance of 3m. The measuring antenna height was varied between 1 and 4m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity. The measurements were performed for both vertical and horizontal antenna polarization. EUT emission levels were compared when the EUT antenna position was vertical polarization and horizontal polarization. The equipment was previously checked at each position of three axis X, Y and Z, and with base unit. The position in which the maximum noise occurred was chosen to put into measurement. See the photographs in page 12.

Fundamental

Z axis was worst under the horizontal antenna polarization and Y was worst under the vertical antenna polarization.

Spurious emission

Below 1GHz, Remote commander with base unit condition was worst under both vertical and horizontal antenna polarization. Above 1GHz, Z axis was worst under the horizontal antenna polarization and Y was worst under the vertical antenna polarization.
