Description of Security CODE

The subject device's 31 independent channels, auto scan at link establishment and smart channel hopping combine to find the clearest channels at all times, automatically. Spread spectrum technology ensures the highest level of security available in a cordless phone.

The spread spectrum technique provides better security than other solutions since only the receiver has a copy of the pre-assigned spreading code, making interception virtually impossible. The transmitting signal diluted over a large bandwidth with power density at any point being very light, so the signal goes unnoticed by other systems since they are not tuned to receive it.

This telephone has 16129 kinds of scrambled security code. This code is programmed in a factory to each product. The user can not change this code manually.

This is complying with FCC part 15.247 requirements.
