

Overview

The UTX-H1 is a transmitter for a UHF synthesized wireless microphone system to be used for broadcast or movie production purpose. This transmitter is suitable for Electronic News gathering (ENG) and Electronic Field Production (EFP).

The microphone/ transmitter and tuner of the wireless microphone system are classified by frequency band.

A 24-MHz frequency band is assigned to each microphone/ transmitter and tuner model. In building a UHF wireless microphone system, be sure to combine a microphone/ transmitter and a tuner having the same wireless channel (frequency).

Features

The features of the UTX-H1 are:

- Phase Locked Loop (PLL) synthesized system
- Compact and lightweight
- Operation powered by easily available batteries
- LCD for coordinated operation control
- Saved channel and Input attenuation settings
- Highly reliable electronic attenuator
- RF carrier with tone signal
- Wide dynamic range and low noise
