

# FCC Part15 Subpart B Test Report

Product Name : Wireless Stereo Headphone  
Model No. : BackBeat PRO  
FCC ID : AL8-BBP  
IC : 457A-BBP

Applicant : Plantronics, Inc.

Address : 345 Encinal Street, Santa Cruz, CA95060 USA

Date of Receipt : Mar. 13, 2014  
Test Date : Mar. 13, 2014~ Apr. 01, 2014  
Issued Date : Apr. 25, 2014  
Report No. : 1430276R-RF-US-P01V03  
Report Version : V 1.1

The test results relate only to the samples tested.

The test results shown in the test report are traceable to the national/international standard through the calibration of the equipment and evaluated measurement uncertainty herein.

This report must not be used to claim product endorsement by TAF, CNAS or any agency of the government.

The test report shall not be reproduced without the written approval of QuieTek Corporation.

# Test Report Certification

Issued Date : Apr. 25, 2014

Report No. :1430276R-RF-US-P01V03

Product Name : Wireless Stereo Headphone  
 Applicant : Plantronics, Inc.  
 Address : 345 Encinal Street, Santa Cruz, CA95060 USA  
 Manufacturer : Weifang GoerTek Electronics Co.,Ltd.  
 Address : Weifang Free Trade Zone, Gaoxin 2 Road, High-Tech  
 Industrial Development Zone, Weifang, Shandong Province,  
 261205, China  
 Model No. : BackBeat PRO  
 FCC ID : AL8-BBP  
 IC : 457A-BBP  
 EUT Voltage : DC 3.7V  
 Brand Name : Plantronics  
 Applicable Standard : FCC Part 15 Subpart B: 2012 Class B  
 ANSI C63.4: 2009  
 ICES-003 Issue 5: 2012 Class B  
 Test Result : Complied  
 Performed Location : Suzhou EMC Laboratory  
 No.99 Hongye Rd., Suzhou Industrial Park Loufeng Hi-Tech  
 Development Zone., Suzhou, China  
 TEL: +86-512-6251-5088 / FAX: +86-512-6251-5098  
 FCC Registration Number: 800392; IC Lab Code: 4075B

Documented By : Alice Ni

## Laboratory Information

We, **Quietek Corporation**, are an independent EMC and safety consultancy that was established the whole facility in our laboratories. The test facility has been accredited/accepted(audited or listed) by the following related bodies in compliance with ISO 17025, EN 45001 and specified testing scope:

|                      |          |                       |
|----------------------|----------|-----------------------|
| <b>Taiwan R.O.C.</b> | <b>:</b> | <b>BSMI, NCC, TAF</b> |
| <b>Germany</b>       | <b>:</b> | <b>TUV Rheinland</b>  |
| <b>Norway</b>        | <b>:</b> | <b>Nemko, DNV</b>     |
| <b>USA</b>           | <b>:</b> | <b>FCC</b>            |
| <b>Japan</b>         | <b>:</b> | <b>VCCI</b>           |
| <b>China</b>         | <b>:</b> | <b>CNAS</b>           |

The related certificate for our laboratories about the test site and management system can be downloaded from Quietek Corporation's Web Site :<http://www.quietek.com/tw/ctg/cts/accreditations.htm>

The address and introduction of Quietek Corporation's laboratories can be founded in our Web site :

| 36                                                      | 2474 MHz  | 37      | 2476 MHz  | 38      | 2478 MHz  | 39      | 2480 MHz  |

### Bluetooth Antenna List

| Antenna     | Manufacturer | Model No.   | Peak Gain          |
|-------------|--------------|-------------|--------------------|
| PCB antenna | Goertek      | IFA antenna | 2.61dBi for 2.4GHz |

## 1.2. Mode of Operation

QuieTek has verified the construction and function in typical operation. All the test modes were carried out with the EUT in normal operation, which was shown in this test report and defined as:

| Test Mode               |
|-------------------------|
| Mode 1: Receive by DH5  |
| Mode 2: Receive by 2DH5 |
| Mode 3: Receive by 3DH5 |
| Mode4 : Receive by BLE  |

Note:

1. Regards to the frequency band operation: the lowest, middle and highest frequency of channel were selected to perform the test, then shown on this report.
2. For portable device, radiated spurious emission was verified over X, Y, Z Axis, and shown the worst case on this report.

### 1.3. Tested System Details

The types for all equipments, plus descriptions of all cables used in the tested system (including inserted cards) are:

| Product |          | Manufacturer | Model No.     | Serial No. | Power Cord         |
|---------|----------|--------------|---------------|------------|--------------------|
| 1       | Notebook | ThinkPad     | ThinkPad X220 | N/A        | Non-Shielded, 1.8m |

1.4. Configuration of Tested System

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                          |

| Temperature/Humidity Meter | Zhicheng     | ZC1-2        | AC5-TH      | 2015/01/08     |

### **2.3. Measurement Uncertainty**

#### Conducted Emission

The measurement uncertainty is evaluated as  $\pm 2.26$  dB.

#### Radiated Emission

The measurement uncertainty is evaluated as  $\pm 3.19$  dB.

## 2.4. Test Environment

| Performed Item     | Items                      | Required | Actual   |
|--------------------|----------------------------|----------|----------|
| Conducted Emission | Temperature (°C)           | 15-35    | 25       |
|                    | Humidity (%RH)             | 25-75    | 47       |
|                    | Barometric pressure (mbar) | 860-1060 | 950-1000 |
| Radiated Emission  | Temperature (°C)           | 15-35    | 28       |
|                    | Humidity (%RH)             | 25-75    | 46       |
|                    | Barometric pressure (mbar) | 860-1060 | 950-1000 |

### 3. Conducted Emission

#### 3.1. Test Specification

According to EMC Standard: FCC Part 15 Subpart B Class B, ANSI C63.4

#### 3.2. Test Setup

#### 3.3. Limit

| FCC Part 15 Subpart B Paragraph 15.107 Limits |           |           |
|-----------------------------------------------|-----------|-----------|
| Frequency (MHz)                               | QP (dBuV) | AV (dBuV) |
| 0.15 - 0.50                                   | 66 - 56   | 56 - 46   |
| 0.50 - 5.0                                    | 56        | 46        |
| 5.0 - 30                                      | 60        | 50        |

Note 1: The lower limit shall apply at the transition frequencies.

Note 2: The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.5 MHz.

#### 3.4. Test Procedure

The EUT was placed on a platform of nominal size, 1 m by 1.5 m, raised 80 cm above the conducting ground plane. The vertical conducting plane was located 40 cm to the rear of the

EUT. All other surfaces of EUT were at least 80 cm from any other grounded conducting surface. The EUT and simulators are connected to the main power through a line impedance stabilization network (LISN). The LISN provides a 50 ohm /50uH coupling impedance for the measuring equipment. The peripheral devices are also connected to the main power through a LISN. (Please refer to the block diagram of the test setup and photographs)

Each current-carrying conductor of the EUT power cord, except the ground (safety) conductor, was individually connected through a LISN to the input power source.

The excess length of the power cord between the EUT and the LISN receptacle were folded back and forth at the center of the lead to form a bundle not exceeding 40 cm in length.

Conducted emissions were investigated over the frequency range from 0.15MHz to 30MHz using a receiver bandwidth of 9kHz.

### **3.5. Deviation from Test Standard**

No deviation.

### 3.6. Test Result

|                                                          |                          |

## 4. Radiated Emission

### 4.1. Test Specification

According to EMC Standard: FCC Part 15 Subpart B Class B, ANSI C63.4

### 4.2. Test Setup

Below 1GHz Test Setup:

Above 1GHz Test Setup:

#### 4.3. Limit

| FCC Part 15 Subpart B Paragraph 15.109 |              |                |
|----------------------------------------|--------------|----------------|
| Frequency (MHz)                        | Distance (m) | Level (dBuV/m) |
| 30 - 88                                | 3            | 40             |
| 88 - 216                               | 3            | 43.5           |
| 216 - 960                              | 3            | 46             |
| Above 960                              | 3            | 54             |

Note 1: The lower limit shall apply at the transition frequency.

Note 2: Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the device or system.

Note 3: E field strength (dBuV/m) = 20 log E field strength (uV/m)

#### 4.4. Test Procedure

The EUT and its simulators are placed on a turn table which is 0.8 meter above ground. The turn table can rotate 360 degrees to determine the position of the maximum emission level.

The EUT was positioned such that the distance from antenna to the EUT was 3 meters.

The antenna can move up and down between 1 meter and 4 meters to find out the maximum emission level.

Both horizontal and vertical polarization of the antenna are set on measurement. In order to find the maximum emission, all of the interface cables must be manipulated on radiated measurement.

For an unintentional radiator, including a digital device, the spectrum shall be investigated from the lowest radio frequency signal generated or used in the device, without going below the lowest frequency for which a radiated emission limit is specified, up to the frequency shown in the following table:

| Highest frequency generated or used in the device or on which the device operates or tunes (MHz) | Upper frequency of measurement range (MHz) |
|--------------------------------------------------------------------------------------------------|--------------------------------------------|
| Below 1.705                                                                                      | 30                                         |
| 1.705 - 108                                                                                      | 1000                                       |
| 108 - 500                                                                                        | 2000                                       |

|            |                                                                     |
|------------|---------------------------------------------------------------------|
| 500 - 1000 | 5000                                                                |
| Above 1000 | 5th harmonic of the highest frequency or 40 GHz, whichever is lower |

On any frequency or frequencies below or equal to 1000 MHz, the radiated limits shown are based on measuring equipment employing a quasi-peak detector function and above 1000 MHz, the radiated limits shown are based measuring equipment employing an average detector function.

When average radiated emission measurement are included emission measurement Above 1000 MHz, there also is a limit on the radio frequency emissions, as measured using instrumentation with a peak detector function, corresponding to 20 dB above the maximum permitted average limit.

For class A, the measurement distance between the EUT and antenna is 10 meters for under 1GHz and above 1GHz.

For class B, the measurement distance between the EUT and antenna is 3 meters for under 1GHz and 3 meters for above 1GHz.

The bandwidth below 1GHz setting on the field strength meter (R&S Test Receiver ESCI) is 120 kHz and above 1GHz is 1MHz.

Note: When measurement above 1GHz, the horn antenna will bend down a little (as horn antenna have the narrow beamwidth) in order to find the maximum emission of EUT.

#### 4.5. Deviation from Test Standard

No deviation.

#### 4.6. Test Result

All of the test result shown indicates the worst case, and spectrum analyzer parameters setting as shown below:

Peak detector: RBW = 1MHz, VBW = 3MHz, sweep time = 200ms;

Average detector: RBW = 1MHz, VBW = 10Hz, sweep time = auto.

Measure Level = Reading Level + Cable Loss + Antenna Factor - Preamplifier Gain

Mode 1: Receive-1Mbps (GFSK\_DH5)
