2.6.3 Date of Test

29 April 2015, 30 April 2015 & 1 May 2015

2.6.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.6.5 Test Procedure

The spectrum analyser settings were configured as defined in KDB 789033 D02 V01, Section II clause E.2 Method SA-2 Alternative, except the span was adjusted to contain the band edge to determine whether the frequency stability of the emission is maintained within the band of operation under all conditions as specified in the user manual.

For modes which support simultaneous transmissions from multiple outputs, the limit was reduced by 3 dB as specified in KDB 662911 D01 v02r01.
