SECTION 1

GENERAL INFORMATION

GENERAL INFORMATION

1.1 Product Description

The Equipment Under Test (EUT) is a RELM Wireless Corporation, Model RPV516A. The EUT is a VHF FM Portable transceiver which operates on 16 programmable channels (25 kHz and/or 12.5 kHz) within the 150.0 to 174.0 MHz range.

The unit is manufactured by the following company:

Shenzhen HYT Science & Technology Co., Ltd.
R2-A 1/F
Shenzhen High-Tech Industrial Park
Shennan Road
Shenzhen China Postcode: 518057

1.2 Related Submittal(s)/Grant(s)

The EUT will be used with part of a system to send/receive data. The transceiver presented in this report will be used with other like transceivers.

The EUT is subject to the following authorizations:

- a) Certification as a transmitter as specified by Parts 22, 74, 80, and 90.

The information contained in this report is presented for the certification authorization(s) for the EUT.

SECTION 2

TESTS AND MEASUREMENTS

TEST AND MEASUREMENTS

2.1 Configuration of Tested System

Prepared in accordance with the requirements of the FCC Rules and Regulations Part 2. All measurements are peak unless stated otherwise. The video filter associated with the spectrum analyzer was off throughout the evaluation process. Interconnecting cables were manipulated as necessary to maximize emissions. A block diagram of the tested system is shown in Figure 1. Test configuration photographs for spurious emissions are shown in Figure 2.

The sample used for testing was received by U.S. Technologies on September 10, 2001 in good condition.

2.2 Test Facility

Unless otherwise stated, testing was performed at US Tech's measurement facility at 3505 Francis Circle, Alpharetta, GA. This site has been fully described and submitted to the FCC, and accepted in their letter marked 31040/SIT. Additionally this site has also been fully described and submitted to Industry Canada (IC), and has been approved under file number IC2982.

2.3 Test Equipment

Table 2 describes test equipment used to evaluate this product.

2.4 Modifications

No modifications were made by US Tech to bring the EUT into compliance with FCC limits for the transmitter portion of the EUT.

Model Number: Unknown at this time

Gain: Not specified by Relm Communications, Inc.

Connector: SMA

2.6 RF Power Output (FCC Section 2.1046)

Information regarding this requirement has been supplied by RELM Communications. The EUT was directly connected to an HP 8901A Modulation Analyzer (Cal Due 04/11/02). The measured results are shown in Table 3 and Figure 3.

FCC Minimum Standard

FCC Part 22

<150 Watts

FCC Part 74.461

Power delivered to antenna must be < 100 Watts

FCC Part 80.215

Maximum power at the input terminal to the antenna is 50 Watts

FCC Part 90.205

Power dependent upon station's antenna HAAT and required service area and may be from 1 to 500 Watts.

TABLE 3
RF POWER OUTPUT

Test Date: July 17, 2001
UST Project: 01-0504
Customer: RELM Wireless Corporation
Model: RPV516A

Frequency of Fundamental (MHz)	Measurement (Watt)	FCC Limit (Watt)
150.05	5.3	Varies
162.50	5.3	Varies
173.95	5.2	Varies

Note: The power output may depend upon the intended use of the EUT. For all tests, the EUT was set to near maximum conditions. The EUT requires a FCC license and is programmed for use by local RELM Radio Dealers.

Figures Not Provided

Modulation Characteristics (FCC Section 2.1047)

Where applicable, the modulation characteristics of the EUT have been supplied by RELM Wireless Corporation as stipulated by the following FCC requirements:

- a) Equipment which utilizes voice modulated communication shall show the frequency response of the audio modulating circuit over a range of 100 to 5000 Hz. For equipment which is required to have a low pass filter, the frequency response of the filter, or all of the circuitry installed between the modulation limited and the modulated stage shall be supplied.
- b) Equipment which employs modulation limiting, a curve showing the percentage of modulation versus the modulation input voltage shall be supplied.

FCC Minimum Standard

FCC Part 22

None

FCC Part 74.463

Each new remote pickup broadcast station with a power output in excess of 3 watts shall be equipment with a device which will automatically prevent modulation in excess of the limits. If frequency modulation is employed, the emissions shall conform to the emission requirements of 74.462.

FCC Part 80.213

- (a) When phase of frequency modulation is used in the 156-162 MHz and 216-220 MHz bands, the peak modulation must be maintained between 75 and 100 percent. A frequency deviation of ± 5 kHz is defined as 100 percent peak modulation.
- (b) Transmitters using F3E emission must have a modulation limiter to prevent any modulation over 100 percent
- (d) Ship and coast station transmitters operating in the 156-162 MHz and 216-220 MHz bands must be capable of proper operation with a frequency deviation of ± 5 kHz.
- (e) Coast station transmitters operated in the 156-162 MHz band must be equipped with an audio low-pass filter. The filter must be installed between the modulation limiter and the modulated radio frequency stage. At frequencies between 3 kHz and 20 kHz it must have an attenuation greater than at 1 kHz by at least 60 log (f/3) db. At frequencies above 20 kHz the attenuation must be at least 50 dB greater than at 1 kHz.

FCC Part 90.205

Transmitters utilizing analog emissions that are equipped with an audio low-pass filter must meet the emission limitations must meet proper emissions mask of 90.210.

2.8 Occupied Bandwidth (FCC Section 2.1049)

EUT was modulated by a 2500 Hz signal. The bandwidth of the fundamental was measured by RELM Wireless Corporation using a spectrum analyzer, as shown in Figure 5a through Figure 5b.

FCC Minimum Standard

FCC Part 22.359, 74.462, 80.211 and 90.210 (25 kHz bandwidth only)

For any frequency removed from the center of the assigned channel by more than 50 percent up to and including 100 percent of the authorized bandwidth, at least 25 dB.

On any frequency removed from the center of the assigned channel by more than 100 percent up to and including 250 percent, at least 35 dB.

On any frequency removed from the center of the assigned channel by more than 250 percent at least:

$$\text{Low: } 43 + 10 \log (P_{\text{Watts}}) = 43 + 10 \log (5.3) = 50.2 \text{ dB}$$

$$\text{Middle: } 43 + 10 \log (P_{\text{Watts}}) = 43 + 10 \log (5.3) = 50.2 \text{ dB}$$

$$\text{High: } 43 + 10 \log (P_{\text{Watts}}) = 43 + 10 \log (5.2) = 50.2 \text{ dB}$$

The resolution bandwidth was 300 Hz or greater for measuring up to 250 kHz from the edge of the authorized frequency segment, and 30 kHz or greater for measuring more than 250 kHz from the authorized frequency segment.

FCC Part 90.210 (12.5 kHz Bandwidth only)

For any frequency removed from the center of the authorized bandwidth f_0 to 5.625 kHz removed from f_0 , 0 dB.

On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 5.626 kHz but no more than 12.5 kHz, at least $7.27 (f_d - 2.88 \text{ kHz})$ dB.

On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 12.5 kHz at least:

$$\text{Low: } 50 + 10 \log (P_{\text{Watts}}) = 50 + 10 \log (5.3) = 57.2 \text{ dB}$$

$$\text{Middle: } 50 + 10 \log (P_{\text{Watts}}) = 50 + 10 \log (5.3) = 57.2 \text{ dB}$$

$$\text{High: } 50 + 10 \log (P_{\text{Watts}}) = 50 + 10 \log (5.2) = 57.2 \text{ dB}$$

Figure 5a.
Occupied Bandwidth (Wide Bandwidth)

Figure 5b.
Occupied Bandwidth (Narrow Bandwidth)

2.9 Spurious Emissions at Antenna Terminals (FCC Section 2.1051)

Spurious emissions appearing at the antenna terminals were measured with a spectrum analyzer by connecting the spectrum analyzer directly via a short cable to the antenna output terminals or across the antenna leads on the PCB as specified by the manufacturer. Results are shown in Figure 6.

FCC Minimum Standard

FCC Part 22.359, 74.462, 80.211 and 90.210 (25 kHz bandwidth only)

On any frequency removed from the center of the assigned channel by more than 250 percent at least:

$$\text{Low: } 43 + 10 \log (P_{\text{Watts}}) = 43 + 10 \log (5.3) = 50.2 \text{ dB}$$

$$\text{Middle: } 43 + 10 \log (P_{\text{Watts}}) = 43 + 10 \log (5.3) = 50.2 \text{ dB}$$

$$\text{High: } 43 + 10 \log (P_{\text{Watts}}) = 43 + 10 \log (5.2) = 50.2 \text{ dB}$$

FCC Part 90.210 (12.5 kHz Bandwidth only)

On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 12.5 kHz at least:

$$\text{Low: } 50 + 10 \log (P_{\text{Watts}}) = 50 + 10 \log (5.3) = 57.2 \text{ dB}$$

$$\text{Middle: } 50 + 10 \log (P_{\text{Watts}}) = 50 + 10 \log (5.3) = 57.2 \text{ dB}$$

$$\text{High: } 50 + 10 \log (P_{\text{Watts}}) = 50 + 10 \log (5.2) = 57.2 \text{ dB}$$

NOTE: In general, the worse case attenuation requirement shown above was applied.

2.10 Field Strength of Spurious Radiation (FCC Section 2.1053)

Spurious emissions were evaluated from 30 MHz to 1.8 GHz at an EUT to antenna distance of 3 meters. The EUT was tested modulated by its own internal sources. The EUT was placed on an open area test site and the spurious emissions tested as stipulated by EIT/TIA-603:1992 section 2.2.12. Measurements for 30 to 1000 MHz were made with the analyzer's bandwidth set to 120 kHz. Measurements above 1 GHz were made with the analyzer's bandwidth set to 1 MHz.

FCC Minimum Standard

FCC Part 22.359, 74.462, 80.211 and 90.210 (25 kHz bandwidth only)

On any frequency removed from the center of the assigned channel by more than 250 percent at least:

$$\text{Low: } 43 + 10 \log (P_{\text{Watts}}) = 43 + 10 \log (5.3) = 50.2 \text{ dB}$$

$$\text{Middle: } 43 + 10 \log (P_{\text{Watts}}) = 43 + 10 \log (5.3) = 50.2 \text{ dB}$$

2.11 Frequency Stability (FCC Section 2.1055)

Information regarding this requirement has been supplied by RELM Communications. The frequency tolerance of the carrier signal was measured by while ambient temperature was varied from -30 to 50 degrees centigrade. The frequency tolerance was verified at 10 degree increments. The EUT was tested while powered from 9.6 VDC. Additionally, the supply voltage was varied from 85% to 115% of the nominal value (except for hand carried, battery powered equipment which was additionally measured at battery endpoint). The data is shown in the following tables and figures.

FCC Minimum Standard
