SECTION 1**RF POWER OUTPUT**

2.985 (A) The RF Power measured at the output terminals:

AXATR-390-A2

6 & 25 Watts

Method: The measurement was made per TIA/EIA-603 using the following equipment::

A 50 ohm load is attached to the output terminal through a directional coupler.. The power is measured on a HP436A power meter.

SECTION 2**MODULATION CHARACTERISTICS**

Ref. Par. 2.987 (a, b, d) the frequency and amplitude response to audio inputs measured per TIA/EIA 603 are shown on the following sheet

Page 3 Audio Frequency Response(25 kHz)

Page 4&5 _Modulation Characteristics (25kHz)

Page 6&7 _Modualtion Characteristics(NPSPAC)

Equipment used was:

Marconi Instruments Ltd. FM/AM Modulation Meter TF2300B

Hewlett Packard Audio Signal Generator 204D

Hewlett Packard Distortion Analyzer 333A

At those modulation frequencies at which the transmitter is not capable of producing 30% of system deviation, audio response is calculated from measurement of input voltage producing a lesser deviation.

SECTION 3**OCCUPIED BANDWIDTH**

(FOR 25 kHz CHANNELIZATION)

Method of Measurement Per 2.989 (c,1) Data on Occupied Bandwidth is presented in the form of a spectrum analyzer plot which illustrates the transmitter sidebands. A plot is taken of the carrier sideband modulated with a 2500 Hz tone at a level 16 dB greater than that required to produce 50 percent modulation. (The spectrum analyzer grid indicates the reference level of the carrier unmodulated in all exhibits.)

SECTION 4**SPURIOUS EMISSIONS**

Reference 2.991 spurious emissions at the antenna terminals when properly loaded with an appropriate artificial antenna were measured per TIA/EIA 603.

Results are as shown in the following Sections

Tx Radiated Emissions		
Page	Frequency Mhz	Power in Watts
28 Front Mount	806.0125 - 869.9875	25

Equipment used was:

Hewlett Pacard Spectrum Analyzer 140T Display, 8554-B-RF, 8552B-IF.

Reference 2.993 field strength of spurious radiation was measured on our three meter range. The site and equipment are described in the site description and attenuation measurements for the Ericsson Inc. three meter radiation site #2 filed with the FCC in Columbia, Maryland, in November of 1990. The measurement procedure is per TIA/EIA 603, but done on a three meter test site. Results are shown on the following exhibits
