MEASUREMENT/TECHNICAL REPORT

Applicant : Motorola Solutions, Inc
Trade Name/Model No : Motorola / T600/ T603/ T605
Date : December 09, 2015

This report concerns (check one:) Original Grant X Class II Change

Equipment Type: FRF – Part 95 Family Radio Face Held Transmitter
 CXX - Communications Rcvr for use w/ licensed Tx and CBs

Deferred grant requested per 47 CFR 0.457(d)(1)(ii)? Yes No X
If yes, defer until:
date

Company Name agrees to notify the Commission by:
date

of the intended date of announcement of the product so that the grant can be issued on that date.

Report prepared by: Nip Ming Fung, Melvin

GENERAL DESCRIPTION

INTERTEK TESTING SERVICES

1.0 General Description

1.1 Product Description

The Equipment Under Test (EUT) is a Two Ways Radio of GMRS, FRS, Weather Band receiver. GMRS and FRS operate between 462.5500MHz and 467.7125MHz. Weather band receiver operates between 161.650MHz and 162.550MHz.

The Channel 1 - 7 are shared channels for GMRS and FRS. Channel 4 is the representable channel to the test.

The EUT is powered by 3 x 1.5VDC AA size alkaline battery or 1 x 3.6VDC Ni-MH rechargeable battery pack.

The Model(s): T603 / T605 are the same as the Model: T600 in electrical designs including software & firmware, PCB layout and construction design/physical design/enclosure. The only differences between these models are color and model number to be sold for marketing purpose.

Transmitter Portion

- (i) Type of Emission : GMRS: 5K64F3E with filtering; FRS: 5K68F3E with filtering
- (ii) Frequency Range : GMRS/FRS: 462.5625MHz to 462.7125MHz
FRS: 467.5625MHz to 467.7125MHz
GMRS: 462.5500MHz to 462.7250MHz
Channel 1,2,3,4,5,6&7 are common channels for GMRS&FRS
- (iii) Maximum Power Rating : GMRS: 1.3W ERP; FRS: 0.37W ERP
- (iv) Antenna Type : Integral, vertically polarized with 2.15dBi antenna gain
- (iv) dc voltage of radio frequency amplifying device: 4.5V
dc current of radio frequency amplifying device : 1000mA

Channel	Frequency	Description	Channel	Frequency	Description
1	462.5625 MHz	GMRS/FRS	12	467.6625 MHz	FRS
2	462.5875 MHz	GMRS/FRS	13	467.6875 MHz	FRS
3	462.6125 MHz	GMRS/FRS	14	467.7125 MHz	FRS
4	462.6375 MHz	GMRS/FRS	15	462.5500 MHz	GMRS
5	462.6625 MHz	GMRS/FRS	16	462.5750 MHz	GMRS
6	462.6875 MHz	GMRS/FRS	17	462.6000 MHz	GMRS
7	462.7125 MHz	GMRS/FRS	18	462.6250 MHz	GMRS
8	467.5625 MHz	FRS	19	462.6500 MHz	GMRS
9	467.5875 MHz	FRS	20	462.6750 MHz	GMRS
10	467.6125 MHz	FRS	21	462.7000 MHz	GMRS
11	467.6375 MHz	FRS	22	462.7250 MHz	GMRS

INTERTEK TESTING SERVICES

1.2 Related Submittal(s) Grants

This is an Application for Certification of the transmitter portion of a GMRS + FRS Transceiver and weather band receiver. The receiver section of this Transceiver and digital device portion is subject to verification process.

1.3 Test Methodology

Both AC mains line-conducted and radiated emission measurements were performed according to the procedures in ANSI C63.4 (2014) and ANSI/TIA-603-C-2004. Conducted emission measurement were performed according to the procedures in ANSI C63.4 (2014). All radiated measurement were performed in 3m Chamber. All Radiated tests were performed at an antenna the EUT distance of 3 meters, unless stated otherwise in the “**Justification Section**” of this Application.

1.4 Test Facility

The 3m Chamber (FCC Site registration number : 435539) and conducted measurement facility used to collect the radiated data is located at Workshop No. 3, G/F., World-Wide Industrial Centre, 43-47 Shan Mei Street, Fo Tan, Sha Tin, N.T., Hong Kong. This test facility and site measurement data have been placed on file with the FCC.

INTERTEK TESTING SERVICES

EXHIBIT 2

SYSTEM TEST CONFIGURATION

INTERTEK TESTING SERVICES

2.0 **System Test Configuration**

2.1 Justification

The device was configured for testing in a typical fashion (as a customer would normally use it). The device was placed on a turntable, which enabled the engineer to maximize emissions through its placement in the three orthogonal axes. The device has been tested with headset and without headset when the radiated emissions are measured.

The device was powered by 3 x 1.5VDC AA size alkaline battery or 1 x 3.6VDC Ni-MH rechargeable battery pack..

The frequency range of transmitter from 30MHz to 10th harmonics was searched for spurious emissions from the device. The frequency range of weather band receiver from 30MHz to 2GHz was searched for spurious emissions from the device. Only those emissions reported were detected. All other emissions were at least 20 dB below the applicable limits.

For transmitter radiated spurious measurement, the spectrum analyzer resolution bandwidth was 10kHz for emissions below 1GHz, and 1MHz for emissions above 1GHz. Video bandwidth was 300kHz for emissions below 1GHz, and 3MHz for emissions above 1GHz. For receiver radiated spurious measurement, the spectrum analyzer resolution bandwidth was 100kHz for emission below 1GHz, and 1MHz for emissions above 1GHz. Video bandwidth was 3 times greater than resolution bandwidth.

All power-up methods were tested and the worst-case data were reported.

The following are all the test modes (only the worst-case was reported):

GMRS, Tx without headset

GMRS, Tx with headset

FRS (same as the all above cases)

Weather band receiver, without headset

Weather band receiver, with headset

INTERTEK TESTING SERVICES

2.2 EUT Exercising Software

There was no special software to exercise the device. Once the PTT button was pushed, a signal was transmitted.

2.3 Special Accessories

No special accessory is needed for compliance of this device.

2.4 Measurement Uncertainty

When determining of the test conclusion, the Measurement Uncertainty of test has been considered. The values of the Measurement uncertainty for radiated emission test, AC line conducted emission test and RF conducted measurement test are $\pm 5.3\text{dB}$, $\pm 4.2\text{dB}$ and $\pm 1\text{dB}$ respectively.

Uncertainty and Compliance - Unless the standard specifically states that measured values are to be extended by the measurement uncertainty in determining compliance, all compliance determinations are based on the actual measured value.

2.5 Equipment Modification

No modifications by Motorola Solutions, Inc will be incorporated in each production model sold/leased in the United States.

2.6 Support Equipment

N/A

INTERTEK TESTING SERVICES

The EUT has been tested in accordance with the standards identified in this test report. To the best of my knowledge and belief, these tests were performed using the measurement procedures described in this report. All instrumentations and accessories used to verify the EUT for compliance to the indicated standards are calibrated in accordance with ISO 17025:2005 requirements.

Testing was performed at Intertek Testing Services Hong Kong Ltd. Where meets the FCC listed site for certification application requirements stated in FCC Part 2 Section 2.948.

I attest that the necessary measurements were made under my supervision.

EXHIBIT 3

RF POWER OUTPUT

INTERTEK TESTING SERVICES

3.0 **RF Power Output (Section 2.1046(a), 95.639(a), 95.639(d))**

Testing Procedure

1. On a test site, the EUT shall be placed at 0.8m height on a wooden turntable, and in the position closest to normal use as declared by the applicant.
2. The test antenna shall be oriented initially for vertical polarisation located 3m from EUT to correspond to the frequency of the transmitter.
3. The output of the test antenna shall be connected to the measuring receiver and the peak detector is used for the measurement.
4. The transmitter shall be switched on, if possible, without modulation and the measuring receiver shall be tuned to the frequency of the transmitter under test.
5. The test antenna shall be raised and lowered through the specified range of height until a maximum signal level is detected by the measuring receiver.

INTERTEK TESTING SERVICES

6. The transmitter shall then be rotated through 360° in the horizontal plane, until the maximum signal level is detected by the measuring receiver.
7. The test antenna shall be raised and lowered again through the specified range of height until a maximum signal level is detected by the measuring receiver.
8. The maximum signal level detected by the measuring receiver shall be noted.
9. The transmitter shall be replaced by a tuned dipole (substitution antenna).
10. The substitution antenna shall be orientated for vertical polarisation and the length of the substitution antenna shall be adjusted to correspond to the frequency of the transmitter.
11. The substitution antenna shall be connected to a calibrated signal generator.
12. If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.
13. The test antenna shall be raised and lowered through the specified range of height to ensure that the maximum signal is received.
14. The input signal to the substitution antenna shall be adjusted to the level that produces a level detected by the measuring receiver, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuator setting of the measuring receiver.
15. The input level to the substitution antenna shall be recorded as power level in dBm, corrected for any change of input attenuator setting of the measuring receiver.
16. The measurement shall be repeated with the test antenna and the substitution antenna orientated for horizontal polarisation.
17. The measure of the effective radiated power is the larger of the two levels recorded, at the input to the substitution antenna, corrected for gain of the substitution antenna if necessary.

MODULATION CHARACTERISTICS

INTERTEK TESTING SERVICES

4.0 **Modulation Characteristics (Section 2.1047(a)(b), 95.637(a))**

In order to satisfy the 95.637(a) and 2.1047(b) requirements, Modulation Frequency Response and Modulation Limiting Characteristics are attached in Exhibit 4.1 & 4.2.

In order to satisfy the 2.1047(a) requirement, Audio Low Pass Filter Response is attached in Exhibit 4.3.

The modulation frequency response curve and modulation limiting characteristic curve are saving in following page.

The audio low pass frequency response curve is saving in following page.

INTERTEK TESTING SERVICES

4.1 Modulation Frequency Response (Section 2.1047(a), 95.637(a))

Testing Procedure

- 1) Set-up the test equipment in the following configuration:

- 2) Set the audio signal generator frequency to the sound pressure level 127.0dB SPL at the microphone of the EUT.
- 3) The frequency of the audio signal generator is changed from 100Hz to 5kHz.
- 4) Record the frequency deviation.
- 5) The peak frequency deviation must not exceed:

GMRS + FRS : $\pm 2.5\text{kHz}$

- 6) Calculate the audio frequency response at each frequency as:

$$\text{response} = 20 \log_{10}(\text{DEV}_{\text{FREQ}} / \text{DEV}_{\text{REF}});$$

DEV_{REF} = Frequency deviation at 1000Hz ;

DEV_{FREQ} = Frequency deviation at 100 - 5000Hz ;

- 7) From the plot, audio frequency response rolls off before 3.125kHz.

INTERTEK TESTING SERVICES

4.3 Audio Low Pass Filter Response (Section 2.1047(a), 95.637(b))

Testing Procedure

- 1) Connect the audio signal generator to the input of the post limiter low pass filter and the dB meter to the output of the post limiter low pass filter.
- 2) Apply a 1000 Hz tone from the audio signal generator and adjust the level per manufacturer's specifications. Record the dB level of the 1000 Hz tone as LEV_{REF} .
- 3) Set the audio signal generator to the desired test frequency between 3000 Hz and the upper low pass filter limit. Record the dB level at the test frequency as LEV_{FREQ} .
- 4) Calculate the audio frequency response at the test frequency as:

$$\text{low pass filter response} = LEV_{FREQ} - LEV_{REF}$$

- 5) Repeat the above procedure for all the desired test frequencies.

3238.452	-57.2	31.1	88.3	44.1	-44.2
3701.088	-56.1	31.1	87.2	44.1	-43.1
4163.724	-53.4	31.1	84.5	44.1	-40.4
4626.360	-55.6	31.1	86.7	44.1	-42.6

- Remark: 1. Transmission power is 31.1 dBm or 1.1 dB(W).
2. According to Section 95.635(b7), the unwanted emission should be attenuated below TP by at least $43 + 10 \log_{10} (TP)$ dB or 44.1 dB.
3. The test is performed according to ANSI/TIA-603-C-2004.
4. For emission <1000MHz, RBW = 100kHz, VBW $\geq$ RBW
For emission >1000MHz, RBW = 1MHz, VBW $\geq$ RBW

Verdict: Pass

Test Engineer: Koo Wai Ip

Date of Test: **Oct 28,2015**

INTERTEK TESTING SERVICES

Table 6(c): Channel 11

Frequency (MHz)	Effective Radiated Power (dBm)	Transmission Power (dBm)	Attenuation (dBc)	Limit (dBc)	Margin (dB)
935.272	-46.9	25.7	72.6	38.7	-33.9
1402.908	-57.1	25.7	82.8	38.7	-44.1

2338.180	-57.3	25.7	83.0	38.7	-44.3
2805.816	-60.2	25.7	85.9	38.7	-47.2
3273.452	-50.6	25.7	76.3	38.7	-37.6
3741.088	-49.1	25.7	74.8	38.7	-36.1
4208.724	-49.3	25.7	75.0	38.7	-36.3
4676.360	-56.1	25.7	81.8	38.7	-43.1

Remark: 1. Transmission power is 25.7 dBm or -4.3 dB(W).

2. According to Section 95.635(b7), the unwanted emission should be attenuated below TP by at least $43 + 10 \log_{10} (TP)$ dB or 38.7 dB.
3. The test is performed according to ANSI/TIA-603-C-2004.
4. For emission <1000MHz, RBW = 100kHz, VBW $\geq$ RBW
For emission >1000MHz, RBW = 1MHz, VBW $\geq$ RBW

Verdict: Pass

Test Engineer: Koo Wai Ip

Date of Test: Oct 28,2015

INTERTEK TESTING SERVICES

6.2 Field Strength of Radiation Emission and AC line Conducted Emission (Section 15.109 & 15.107)

Data is included worst case configuration (the configuration which resulted in the highest emission levels). A sample calculation, configuration photographs and data tables of the emissions are included.

INTERTEK TESTING SERVICES

A. Field Strength Calculation

The field strength is calculated by adding the reading on the Spectrum Analyzer to the factors associated with preamplifiers (if any), antennas, cables, pulse desensitization and average factors (when specified limit is in average and measurements are made with peak detectors). A sample calculation is included below.

$$FS = RA + AF + CF - AG + PD + AV$$

where

- FS = Field Strength in dB μ V/m
- RA = Receiver Amplitude (including preamplifier) in dB μ V
- CF = Cable Attenuation Factor in dB
- AF = Antenna Factor in dB
- AG = Amplifier Gain in dB
- PD = Pulse Desensitization in dB
- AV = Average Factor in -dB

In the radiated emission table which follows, the reading shown on the data table may reflect the preamplifier gain. An example of the calculations, where the reading does not reflect the preamplifier gain, follows:

$$FS = RA + AF + CF - AG + PD + AV$$

INTERTEK TESTING SERVICES

A. Field Strength Calculation (cont'd)

Example

Assume a receiver reading of 62.0 dB μ V is obtained. The antenna factor of 7.4 dB and cable factor of 1.6 dB is added. The amplifier gain of 29 dB is subtracted. The pulse desensitization factor of the spectrum analyzer was 0 dB, and the resultant average factor was -10 dB. The net field strength for comparison to the appropriate emission limit is 32 dB μ V/m. This value in dB μ V/m was converted to its corresponding level in μ V/m.

$$RA = 62.0 \text{ dB}\mu\text{V}$$

$$AF = 7.4 \text{ dB}$$

$$CF = 1.6 \text{ dB}$$

$$AG = 29.0 \text{ dB}$$

$$PD = 0 \text{ dB}$$

$$AV = -10 \text{ dB}$$

$$FS = 62 + 7.4 + 1.6 - 29 + 0 + (-10) = 32 \text{ dB}\mu\text{V/m}$$

$$\text{Level in } \mu\text{V/m} = \text{Common Antilogarithm} [(32 \text{ dB}\mu\text{V/m})/20] = 39.8 \mu\text{V/m}$$

22	462.7250	462.72484	-0.000035

FCC Limit for FRS (95.626(b)): $\leq \pm 0.00025\%$

FCC Limit for GMRS (95.621(b)): $\leq \pm 0.0005\%$

Verdict: Passed

Test Engineer: Koo Wai Ip

Date of Test: Nov 08,2015

INTERTEK TESTING SERVICES

7.2 Frequency Stability - Temperature (Section 2.1055(a)(b), 95.626(b) for FRS, 95.621(b) for GMRS)

Testing Procedure

- 1) Set-up the test equipment in the following configuration:

Temperature Chamber

- 2) Set the Temperature Chamber to 20°C and stabilize the EUT temperature for one hour. Set transmitter ON for two minutes.
- 3) Measure the channel frequency of channel 4 in MHz.
- 4) Turn the EUT OFF.
- 5) Repeat the above procedure from -30°C to 50°C with 10°C increment for GMRS.
- 6) Repeat the above procedure from -20°C to 50°C with 10°C increment for FRS.

INTERTEK TESTING SERVICES

C. Test Result

Table 8(a)
