Re: Application for a Class II Permissive Change request to Certificated transceiver with
FCC ID: AZ489FT5793.

Gentlemen:

Motorola Inc., 8000 West Sunrise Boulevard, Fort Lauderdale, Florida 33322, herein submits
it's request for a Class II Permissive Change for the above transciever.

The changes are a layout change to the Printed Circuit Board and replacing the back housing,
which is now unpainted. These changes were done to add additional decoupling capacitors on
the DC supply lines with revised grounding around the Power Amplifier.

Radiated Spurious Emissions data taken are within FCC limits but exceeded those in the
original submission. All other data on file continues to be compliant. Also, since the Radiated
Spurious Emissions exceed those originally reported by an amount greater than that
attributable to measurement uncertainty, this change meets the requirements for a Class II
Permissive Change.

We are attaching Transmitter Radiated and Conducted Spurious Emissions Data and an
Attestation Statement.

Please contact me at (954) 723-5793 if you require any additional information.

Regards,

Mike Ramnath
FCC Liaison
