Attestation and Product Family Declaration

(Pursuant to FCC Part 2.907, 2.908 and RSP 100 Sec 4)

2.1 Statement of Certification

The transceiver type described herein (AZ492FT7190/109U-92FT7190) is in compliance with all applicable parts of the FCC rules and ISSED RSS standards.

Each unit manufactured, imported, or marketed will conform to the samples tested herein, within the statistical variations that can be expected due to high volume production and test measurement error.

2.2 Spectrum Efficiency Declaration

The device supports TDMA (F2) transmission with 12.5 kHz spacing. Each transmit slot is 30 ms long and it is followed by 30 ms standby / receive. Transmission in digital TDMA mode (according to 6.25e efficiency standard) allows improved spectrum utilization whereby the existing 12.5 kHz channel now allows two voice conversations to take place instead of one. Furthermore, the device has an integrated voice & data feature that extends the capability of the system to send & receive data through conventional infrastructure.

This device is also capable of supporting a minimum data rate of 4800 bits per second per 6.25kHz channel bandwidth.

Notes:

1. WiFi 2.4GHz and BT do not transmit at the same time as both use a common antenna.
2. WiFi 2.4GHz and BT do not transmit at the same time as it is limited by WIFI/BT coexistence.
3. WiFi 5GHz and 2.4GHz do not transmit at the same time as it is limited by Chip architecture.
4. All models are electrically similar in terms of LMR technology.
5. Each model is equipped with a control head containing logic circuitry designed to manage the standard and optional system features. This control head is available in two distinct configurations: a Color Alphanumeric Display or a Numeric Display.
6. Model MR7b hardware supports WiFi, Bluetooth and GNSS capabilities, where Model MR7r incorporates additional hardware to support an Ethernet RJ45 port.
7. The WiFi, Bluetooth & GNSS technologies, along with the Ethernet RJ45 port, may be pre-activated in software or remain disabled, becoming available via post-purchase enablement.
8. Generic Option Board (GOB) is an embedded host platform that integrates with the radio internally to facilitate third-party software expansion. This component can be installed as a post-purchase field upgrade for all models.
