

Straubing, 08 February 2006

**TEST - REPORT**

**No. 55503-060034 (Edition 1)**

**for**

**FX-40 with FX-FM 72 MHz**

**Transmitter Module for Model Control**

**Applicant:** Futaba Corporation

**Test Specifications:** FCC Code of Federal Regulations,  
CFR 47, Part 95, Subpart C&E

FCC Code of Federal Regulations,  
CFR 47, Part 2, Subpart J

**Note:**

The test data of this report is related only to the individual item which has been tested. This report shall not be reproduced except in full extent without the written approval of the testing laboratory.

## 4 Summary

### Summary of test results

The tested sample complies with the requirements set forth in the  
**Code of Federal Regulations CFR 47, Part 95, Subpart C & E**  
and the  
**Code of Federal Regulations CFR 47 Part 2, Subpart J**  
of the Federal Communication Commission (FCC).

### Personnel involved in this report

Laboratory Manager:

Mr. Johann Roidt

Responsible for testing:

Mr. Martin Steindl

Responsible for test report:

Mr. Martin Steindl

## 5 Operation Mode and Configuration of EUT

### Operation Mode(s)

- Transmitting continuously with 72.510 MHz, modulation as indicated in appropriate test record.
- Antenna extended to maximum. <sup>4</sup>
- It was not possible to deactivate modulation completely, thus the frequency-error-measurement was done with PPM-modulation.
- The applicant provided a dummy load for conducted measurements.

<sup>4</sup> For radiated measurement only.

**Configuration(s) of EUT**

The EUT was configured as stand alone device.

**List of ports and cables**

| <i>Port</i> | <i>Description</i> | <i>Classification<sup>5</sup></i> | <i>Cable type</i> | <i>Cable length</i> |
|-------------|--------------------|-----------------------------------|-------------------|---------------------|
|             | Not Applicable     |                                   |                   |                     |

**List of devices connected to EUT**

| <i>Item</i> | <i>Description</i> | <i>Type Designation</i> | <i>Serial no. or ID</i> | <i>Manufacturer</i> |
|-------------|--------------------|-------------------------|-------------------------|---------------------|
|             | Not Applicable     |                         |                         |                     |

**List of support devices**

| <i>Item</i> | <i>Description</i> | <i>Type Designation</i> | <i>Serial no. or ID</i> | <i>Manufacturer</i> |
|-------------|--------------------|-------------------------|-------------------------|---------------------|
|             | Not Applicable     |                         |                         |                     |

<sup>5</sup> Ports shall be classified as ac power, dc power or signal/control port

6 Measurement Procedures

6.1 Maximum Transmitter Power

The maximum transmitter power was measured conducted and radiated.

6.1.1 Conducted Maximum Transmitter Power

| Measurement Procedure:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                |

| Guide:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | CFR 47 Part 2, section 2.1046  |
| <p>Conducted output power is measured at the RF output terminals (e.g. antenna connector if antenna is detachable) when the transmitter is adjusted in accordance with the tune-up procedure, if applicable. The RF output terminals are connected to a spectrum analyzer and/or a power meter with appropriate sensor. If required, a resistive matching network equal to the impedance specified or employed for the antenna is used as well as dc block and appropriate attenuators (50 Ohms). The electrical characteristics of the radio frequency load attached to the output terminals shall be stated, if applicable.</p> <p>If a spectrum analyzer is used and no other settings are specified resolution bandwidth shall be selected according to the carrier frequency <math>f_c</math> and set to 100 kHz. The video bandwidth shall be at least three times greater than the resolution bandwidth. The settings used have to be indicated within the appropriate test record(s).</p> |                                |

| Guide:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | ANSI C63.4                     |
| <p>The frequency tolerance of the carrier signal is measured over a temperature variation of -30 °C to +50 °C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of +20 °C.</p> <p>If the EUT provides an antenna connector the spectrum analyzer is connected to this port. If required, a resistive matching network equal to the impedance specified or employed for the antenna is used as well as dc block and appropriate attenuators (50 Ohms). In cases where the EUT does not provide an antenna connector a test fixture is used.</p> <p>For battery operated equipment, the test is performed using a new battery. Alternatively, an external supply voltage can be used and is at least set to:</p> <ul style="list-style-type: none"><li>• the maximum battery voltage as delivered by a new battery or 115% of the battery nominal voltage</li><li>• the battery nominal voltage</li><li>• 85% of the battery nominal voltage</li><li>• the battery operating end point voltage which shall be specified by the equipment manufacturer</li></ul> <p>The EUT is operating providing an unmodulated carrier. The peak detector of the spectrum analyzer is selected and resolution as well as video bandwidth are set to values appropriate to the shape of the spectrum of the EUT. The frequency counter mode of the spectrum analyzer is used to maximize the accuracy of the measured frequency tolerance.</p> <p>If an unmodulated carrier is not available a significant and stable point on the spectrum is selected and the span is reduced to a value that delivers an accuracy which shall be better than 1% of the maximum frequency tolerance allowed for the carrier signal. This method may be performed as long as the margin to the frequency tolerance allowed is larger than the uncertainty of the measured frequency tolerance.</p> |                                |

| Guide:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | TIA/EI-603                       |
| <p>Emission bandwidth is measured at the RF output terminals (e.g. antenna connector if antenna is detachable) when the transmitter is adjusted in accordance with the tune-up procedure, if applicable. The RF output terminals are connected to a spectrum analyzer. If required, a resistive matching network equal to the impedance specified or employed for the antenna is used as well as dc block and appropriate attenuators (50 Ohms). The electrical characteristics of the radio frequency load attached to the output terminals shall be stated, if applicable.</p> <p>The occupied bandwidth measurement was performed referring to 99% of total power with RBW as close to, but not less than 1% of the 99% power bandwidth.</p> |                                  |

| <p>Measurements are made in both the horizontal and vertical planes of polarization in a fully anechoic room using a spectrum analyzer with the detector function set to peak and resolution bandwidth set to 30 kHz, video bandwidth set to 100 kHz.</p> <p>Testing up to 1 GHz is performed with a linear polarized logarithmic periodic antenna combined with a 4:1 broadband dipole ("Trilog broadband antenna"). For testing above 1 GHz horn antennas are used.</p> <p>Hand-held or body-worn devices are rotated through three orthogonal axes to determine which attitude and configuration produces the highest emission relative to the limit and therefore shall be used for final testing.</p> <p>During testing the EUT is rotated all around to find the maximum levels of emissions. Equipment and cables are placed and moved within the range of position likely to find their maximum emissions.</p> <p>Final testing was performed referring to substitution method as described in TIA/EIA-603, section 2.2.12 ("Radiated Spurious Emissions").</p> |                                           |

## 8.2 Carrier Frequency Stability

|                           |                                                                                                                                                           |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Rules and specifications: | CFR 47 Part 95, section 95.623(c)                                                                                                                         |
| Guide:                    | ANSI C63.4                                                                                                                                                |
| Limit:                    | The frequency tolerance of the carrier signal shall be maintained within $\pm 0.002\%$ ( $\pm 20$ ppm) of the carrier frequency under nominal conditions. |
| Temperature range:        | -30°C to +50°C (at normal supply voltage)                                                                                                                 |
| Voltage range:            | 85% to 115% of the rated supply voltage (at a temperature of +20 °C)                                                                                      |
| Measurement procedure:    | Frequency tolerance (6.2)                                                                                                                                 |

|               |                                             |
|---------------|---------------------------------------------|
| Comment:      |                                             |
| Mode:         | Transmitting continuously, Modulation: PPM. |
| Date of test: | 7 February 2006                             |

|              |             |
|--------------|-------------|
| Test Result: | Test passed |
|--------------|-------------|

8.2.1 Frequency Stability vs. Temperature

8.2.2 Frequency Stability vs. Supply Voltage

Note: EUT is equipped with a low battery warning indicator, starting at 8.52 V

Test Result: Test passed

### 8.3 Emission Bandwidth

|                           |                                  |
|---------------------------|----------------------------------|
| Rules and specifications: | CFR 47 Part 2, section 2.1046(a) |
| Guide:                    | TIA/EI-603                       |
| Limit:                    | Authorized bandwidth: 8 kHz      |
| Measurement procedure:    | Emission Bandwidth (6.3)         |

|                              |                                                           |
|------------------------------|-----------------------------------------------------------|
| Calculation                  | $B_n = 2 \cdot B \cdot K$                                 |
| B = modulation rage          | B = 2.5 kHz                                               |
| K = Overall numerical factor | K = 1                                                     |
|                              | $B_n = 2 \cdot 2.5 \text{ kHz} \cdot 1 = 5.0 \text{ kHz}$ |
| <b>Type of Emission</b>      | <b>5K0F1D</b>                                             |

### Test Site Calibration 25 MHz - 1 GHz for ERP Measurements (Substitution Method)

Test site: Fully anechoic room, cabin no. 2  
 Test distance: Standard position [m]: 3.5  
 Date: 11/07/2003  
 Operator: J. Roidt  
 Transmit antennae: Biconical antenna HK 116, Rohde & Schwarz, inv.-no. A-1261  
 Log.-per. antenna HL 223, Rohde & Schwarz, inv.-no. A-1262  
 Horn antenna EMCO 3115, EMCO, inv.-no. B-1516  
 Receiving antenna: Trilog Antenna VULB 9163  
 Signal source: SMY 01, Rohde & Schwarz, inv.-no. A-1627,  
 connected to transmit antenna via cables inv.-no. 1683, port 2 of AP 1  
 and 1657, nominal power at signal generator set to 0 dBm  
 Receiving cables: Inv.-no. 1656, 1681 and 1592  
 Test receiver: FSP 30, Rohde & Schwarz, inv.-no. A-1666  
 Antenna heights: TX antenna (h1): 1.5 metre  
 RX antenna (h2): 1.5 metre  
 Antenna position: TX antenna: center of turn table  
 Polarization: horizontal

### Test Site Calibration 25 MHz - 1 GHz for ERP Measurements (Substitution Method)

Test site: Fully anechoic room, cabin no. 2  
 Test distance: Standard position [m]: 3.5  
 Date: 11/07/2003  
 Operator: J. Roidt  
 Transmit antennae: Biconical antenna HK 116, Rohde & Schwarz, inv.-no. A-1261  
 Log.-per. antenna HL 223, Rohde & Schwarz, inv.-no. A-1262  
 Horn antenna EMCO 3115, EMCO, inv.-no. B-1516  
 Receiving antenna: Trilog Antenna VULB 9163  
 Signal source: SMY 01, Rohde & Schwarz, inv.-no. A-1627,  
 connected to transmit antenna via cables inv.-no. 1683, port 2 of AP 1  
 and 1657, nominal power at signal generator set to 0 dBm  
 Receiving cables: Inv.-no. 1656, 1681 and 1592  
 Test receiver: FSP 30, Rohde & Schwarz, inv.-no. A-1666  
 Antenna heights: TX antenna (h1): 1.5 metre  
 RX antenna (h2): 1.5 metre  
 Antenna position: TX antenna: center of turn table  
 Polarization: horizontal

### Test Site Calibration 25 MHz - 1 GHz for ERP Measurements (Substitution Method)

Test site: Fully anechoic room, cabin no. 2  
 Test distance: Standard position [m]: 3.5  
 Date: 11/07/2003  
 Operator: J. Roidt  
 Transmit antennae: Biconical antenna HK 116, Rohde & Schwarz, inv.-no. A-1261  
 Log.-per. antenna HL 223, Rohde & Schwarz, inv.-no. A-1262  
 Horn antenna EMCO 3115, EMCO, inv.-no. B-1516  
 Receiving antenna: Trilog Antenna VULB 9163  
 Signal source: SMY 01, Rohde & Schwarz, inv.-no. A-1627,  
 connected to transmit antenna via cables inv.-no. 1683, port 2 of AP 1  
 and 1657, nominal power at signal generator set to 0 dBm  
 Receiving cables: Inv.-no. 1656, 1681 and 1592  
 Test receiver: FSP 30, Rohde & Schwarz, inv.-no. A-1666  
 Antenna heights: TX antenna (h1): 1.5 metre  
 RX antenna (h2): 1.5 metre  
 Antenna position: TX antenna: center of turn table  
 Polarization: vertical

### Test Site Calibration 25 MHz - 1 GHz for ERP Measurements (Substitution Method)

Test site: Fully anechoic room, cabin no. 2  
 Test distance: Standard position [m]: 3.5  
 Date: 11/07/2003  
 Operator: J. Roidt  
 Transmit antennae: Biconical antenna HK 116, Rohde & Schwarz, inv.-no. A-1261  
 Log.-per. antenna HL 223, Rohde & Schwarz, inv.-no. A-1262  
 Horn antenna EMCO 3115, EMCO, inv.-no. B-1516  
 Receiving antenna: Trilog Antenna VULB 9163  
 Signal source: SMY 01, Rohde & Schwarz, inv.-no. A-1627,  
 connected to transmit antenna via cables inv.-no. 1683, port 2 of AP 1  
 and 1657, nominal power at signal generator set to 0 dBm  
 Receiving cables: Inv.-no. 1656, 1681 and 1592  
 Test receiver: FSP 30, Rohde & Schwarz, inv.-no. A-1666  
 Antenna heights: TX antenna (h1): 1.5 metre  
 RX antenna (h2): 1.5 metre  
 Antenna position: TX antenna: center of turn table  
 Polarization: vertical

# Radiated Power Test 25 MHz - 100 MHz

## acc. to FCC Part 95 Subpart C/E

Model:  
FX-FM 72 MHz

Serial no.:  
0001

Applicant:  
Futaba Corporation

Test site:  
Fully anechoic room, cabin no. 2

Tested on:  
Test distance 3 metres  
Vertical Polarization

Date of test:  
02/06/2006

Operator:  
M. Steindl

Test performed:  
automatically

File name:  
default.emi

Comment:

- 7.4 V battery supply
- Frequency: 72.510 MHz
- EUT in upright position (P1)

Detector:  
Peak

List of values:  
Selected by hand

Result:  
Limit kept (Carrier excluded)

Project file:  
55503-60034

# Radiated Power Test 100 MHz - 1 GHz

## acc. to FCC Part 95 Subpart C/E

Model:  
FX-FM 72 MHz

Serial no.:  
0001

Applicant:  
Futaba Corporation

Test site:  
Fully anechoic room, cabin no. 2

Tested on:  
Test distance 3 metres  
Horizontal Polarization

Date of test:  
02/06/2006

Operator:  
M. Steindl

Test performed:  
automatically

File name:  
default.emi

Comment:

- 7.4 V battery supply
- Frequency: 72.510 MHz
- EUT in upright position (P1)

Detector:  
Peak

List of values:  
Selected by hand

Result:  
Limit kept

Project file:  
55503-60034

# Radiated Power Test 100 MHz - 1 GHz acc. to FCC Part 95 Subpart C/E

Model:  
FX-FM 72 MHz

Serial no.:  
0001

Applicant:  
Futaba Corporation

Test site:  
Fully anechoic room, cabin no. 2

Tested on:  
Test distance 3 metres  
Horizontal Polarization

Date of test:  
02/06/2006

Operator:  
M. Steindl

Test performed:  
automatically

File name:  
default.emi

Comment:

- 7.4 V battery supply
- Frequency: 72.510 MHz
- EUT flat on table (P2)

Detector:  
Peak

List of values:  
Selected by hand

Result:  
Limit kept

Project file:  
55503-60034

# Radiated Power Test 100 MHz - 1 GHz acc. to FCC Part 95 Subpart C/E

Model:  
FX-FM 72 MHz

Serial no.:  
0001

Applicant:  
Futaba Corporation

Test site:  
Fully anechoic room, cabin no. 2

Tested on:  
Test distance 3 metres  
Vertical Polarization

Date of test:  
02/06/2006

Operator:  
M. Steindl

Test performed:  
automatically

File name:  
default.emi

Comment:

- 7.4 V battery supply
- Frequency: 72.510 MHz
- EUT flat on table (P2)

Detector:  
Peak

List of values:  
Selected by hand

Result:  
Limit kept

# Radiated Power Test 100 MHz - 1 GHz

## acc. to FCC Part 95 Subpart C/E

Model:  
FX-FM 72 MHz

Serial no.:  
0001

Applicant:  
Futaba Corporation

Test site:  
Fully anechoic room, cabin no. 2

Tested on:  
Test distance 3 metres  
Horizontal Polarization

Date of test:  
02/06/2006

Operator:  
M. Steindl

Test performed:  
automatically

File name:  
default.emi

Comment:

- 7.4 V battery supply
- Frequency: 72.510 MHz
- EUT on right side (P3)

Detector:  
Peak

List of values:  
Selected by hand

Result:  
Limit kept

Project file:  
55503-60034
