Applicable Rule Section: **Part 15, Subpart C, Section 15.231**

REPORT OF MEASUREMENTS (continued)

TEST RESULTS

- 15.231 (a):** This device is used as a remote control transmitter.
- 15.231 (a)(1) & 15.231(a)(2):** The transmitter is manually operated and ceases transmission within 5 seconds after deactivation.
- 15.231 (a)(3):** The transmitter does not perform periodic transmissions.
- 15.231 (b):** The fundamental field strength did not exceed 10,996.7 $\mu\text{V/M}$ (Average) at a test distance of 3 meters. In addition, the requirements of section 15.35 for averaging pulsed emissions and for limiting peak emissions were met.
- The field strength of harmonic and spurious emissions did not exceed 1,099.7 $\mu\text{V/M}$ (AVERAGE).

DETERMINATION OF FIELD STRENGTH LIMITS

The field strength limits shown below are found in Section 15.231.

Frequency			Limit		
F1	=	260	3750	=	L1
Fo	=	433.92		Lo	
F2	=	470	12500	=	L2

REPORT OF MEASUREMENTS (continued)

The formula below was utilized to determine the limits:

$$\text{Limit} = L1 + [(F0-F1)(L2-L1)/(F2-F1)]$$

Solving yields:

Fundamental Limit = 10,996.7 μ V/M (AVERAGE) @ 3 Meters

Harmonic Limit = 1,099.7 μ V/M (AVERAGE) @ 3 Meters

DUTY CYCLE DETERMINATION

The unit's RF output was directly coupled to the input of the spectrum analyzer. The analyzer was set for a frequency span of 0Hz. The sweep time was then adjusted in order to display one full pulse train. The transmitter on time was then summed and compared to the time for one full cycle in order to obtain the duty cycle.

Transmitter On Time = 26.02 milliseconds (maximum)

Transmitter Cycle Time = >100 milliseconds

Transmitter Duty Cycle = 26.02 %

See separate e-file for plots named dutycycle.pdf for additional information.

SPECTRUM ANALYZER DESENSITIZATION CONSIDERATIONS

Due to the nature of the emissions being measured, care was taken to ensure that the resolution bandwidth of the spectrum analyzer was adequate to provide accurate measurements. The following formula was utilized:

Setting pulse desensitization equal to zero and utilizing the minimum observed pulse width of 520 μ s yields a minimum required bandwidth of 1,282.10 Hz. FCC specified bandwidths of 100kHz and 1MHz were utilized below and above 1GHz, respectively.

GENERAL NOTES

All readings were taken utilizing a peak detector function at a test distance of 3 meters.

The duty cycle was applied to the peak readings in order to determine the average value of the emissions.

The frequency range was scanned from 30 MHz to 4.3392 GHz. All emissions not reported were more than 20 dB below the specified limit.
