

EXHIBIT I
Operational Description

Product Description

The product is a wireless wrist-band panic transmitter used in conjunction with a wireless security alarm system. When the panic button is depressed, the transmitter sends an alarm signal to the control panel. The control panel, depending on the configuration thereof, takes appropriate action.

The panic transmitter can be factory programmed to send supervisory transmissions once per hour.

The RF circuit consists of a 106.5 MHz oscillator followed by an amplifier. The amplifier is turned on and off to modulate the carrier.
