RE: Attestation of Dual Client Operation (6CD)

FCC ID: B94-HSCI014RWL

IC: 466X-HSCI014RWL

Dear Examiner,

We, (**HP Inc.**), attest that this device complies with the following requirements of the FCC's andISED's rules for the 6GHz bands:

1. Contention-Based Protocol, as demonstrated in the test report, is permanently embedded in the module and is not host-dependent.
2. The device will only associate and connect with a low-power indoor access point or subordinate device or standard access point, and never directly connect to other client devices.
3. This device will always initiate transmission under the control of a low power indoor AP or subordinate or standard client except access point for brief communications before joining a network. These quick messages will only occur if the client has detected an indoor AP, subordinate, or standard access point operating on a channel. These brief messages will have a time-out mechanism such that if it does not receive a response from an AP it will not continually repeat the request.
4. When associated and connected with a low-power indoor access point, subordinate or standard access point device, will operate at a power lower as advertised by the indoor access point, subordinate, or standard access point:
 - i. Lower than or equal to the power advertised by the low-power indoor access point or subordinate and never above the maximum output power allowed by the FCC grant for clients associated with indoor clients or subordinates.
 - ii. Lower than or 6 dB below the power advertised by the standard access point.
5. We acknowledge this device is subject to and in full compliance with the device restrictions listed below. All users are notified of these restrictions through the user manual.
 - This device is prohibited for control of or communications with unmanned aircraft systems, including drones.
