Product With FCC ID: B94HNC75C

Dear Sirs:

This product with FCC ID: B94HNC75C integrates a WLAN module:

|             | Brand Name | FCC ID    | Certification Date |
|-------------|------------|-----------|--------------------|
| WLAN module | HP         | B94HNQR03 | 10/23/2012         |

The antenna gain is as follows:

|              | 2.4GHz band | 5150-5350 MHz | 5470-5850MHz |
|--------------|-------------|---------------|--------------|
| WLAN antenna | 1.4dBi      | 3dBi          | 4dBi         |

No hardware design changes are made on the modules, and the software has not been changed to increase the RF output power of the modules. The original modular reports of B94HNQR03 are submitted to represent the compliance of Parts 15.247 and 15.407.

For SAR compliance, the 5GHz band3 802.11n MIMO output power is reduced 1dB compared to original WLAN modular filing; detailed 802.11n MIMO maximum rated output power information is submitted in operational description exhibit.

The unconditional reduction is controlled by software of the host. The power reduction cannot be disabled / modified by end users, and the fixed reduction level won't change under any operating condition.

If you have any comments or questions, please feel free to contact me.

Sincerely,

*Walter Overcash*
