## 2. General conditions, competences and guarantees

- ✓ Tests performed under FCC standards identified in section 1 are covered by A2LA accreditation.
- ✓ Tests performed under ISED standards identified in section 1 are covered by Cofrac accreditation.
- ✓ Intel Corporation SAS Wireless RF Lab (Intel WRF Lab) is an ISO/IEC 17025:2017 laboratory accredited by the American Association for Laboratory Accreditation (A2LA) with the certificate number 3478.01.
- ✓ Intel Corporation SAS Wireless RF Lab (Intel WRF Lab) is an Accredited Test Firm recognized by the FCC, with Designation Number FR0011.
- ✓ Intel Corporation SAS Wireless RF Lab (Intel WRF Lab) is an ISO/IEC 17025:2017 testing laboratory accredited by the French Committee for Accreditation (Cofrac) with the certificate number 1-6736.
- ✓ Intel Corporation SAS Wireless RF Lab (Intel WRF Lab) is a Registered Test Site listed by ISED, with ISED #1000Y.
- ✓ Intel WRF Lab declines any responsibility with respect to the identified information provided by the customer and that may affect the validity of results.
- ✓ Intel WRF Lab only provides testing services and is committed to providing reliable, unbiased test results and interpretations.
- ✓ Intel WRF Lab is liable to the client for the maintenance of the confidentiality of all information related to the item under test and the results of the test.
- ✓ Intel WRF Lab has developed calibration and proficiency programs for its measurement equipment to ensure correlated and reliable results to its customers.
- ✓ This report is only referred to the item that has undergone the test.
- ✓ This report does not imply an approval of the product by the Certification Bodies or competent Authorities.

### 3. Environmental Conditions

- ✓ At the site where the measurements were performed the following limits were not exceeded during the tests:

|             |                |
|-------------|----------------|
| Temperature | 21.7°C ± 2.1°C |
| Humidity    | 43.6% ± 7.9%   |

## 4. Test samples

| Sample | Control #     | Description | Model      | Serial #   | Date of receipt | Note        |
|--------|---------------|-------------|------------|------------|-----------------|-------------|
| #01    | 210825-02.S01 | Notebook PC | HSN-I45C-4 | 00017605WY | 29/09/2021      | FM350GL WNC |
| #02    | 210825-02.S02 | Notebook PC | HSN-I45C-4 | 00017605XS | 29/09/2021      | FM350GL HB  |

## 5. EUT Features

The herein information is provided by the customer

## 6. Remarks and comments

1. The tested configurations were selected based on the worst-case spurious emissions per frequency band from modular type approval report (FCC ID: ZMOFM350GL).
2. The DUT has different two antenna manufacturers (WNC and Hong-Bo) but the WWAN module and the rated output power remain the same. For each band, tests were performed on the highest peak antenna gain.
3. In regard of RSS 197 annex C shows a description of the algorithm implementation for both reducing the EIRP the limit allowed and decoding an enabling signal from the base station before the mobile equipment can transmit.

## 7. Test Verdicts summary

The statement of conformity to applicable standards in the table below are based on the measured values, without taking into account the measurement uncertainties.

|                                                            | Band     | FCC part                                | RSS part                                 | Test name                              | Verdict |

# Annex A. Test & System Description

## A.1 Measurement System

Measurements were performed using the following setups.

For WCDMA, LTE and ULCA-LTE (Intra-band), a communication tester was used to establish a communication link with the EUT, and the communication tester parameters were set to get the maximum output power from the EUT.

For 5G NR, ULCA-LTE (Inter-band) and EN-DC, a factory test mode software (NoiseProfilingTool5G V1.0.18) provided by the applicant is used to put device in transmission mode at the maximum output power.

### Radiated test setup

#### Radiated Setup 30 MHz - 1 GHz (Transmitter tests)

#### Radiated Setup 1 GHz – 6.4 GHz (Transmitter tests)

## Radiated Setup 6.4 GHz – 18 GHz (Transmitter tests)

## Radiated Setup 18 GHz – 40 GHz (Transmitter tests)

Sample Calculation

The spurious received power  $P$  at the spectrum Analyzer is converted to EIRP the equivalent isotropically radiated power, in dBm using the transducer factor  $F$  corresponding to the Rx path Loss:

$$F \text{ (dB)} = \text{Free Space Attenuation (dB)} + \text{Cable losses (dB)} - \text{Amplifiers Gain (dB)} - \text{Rx Antenna Gain (dBi)}$$

$$\text{EIRP (dBm)} = P(\text{dBm}) + F \text{ (dB)}$$

## A.2 Test Equipment List

### A.3 Measurement Uncertainty Evaluation

The system uncertainty evaluation is shown in the table below with a coverage factor of  $k = 2$  to indicate a 95% level of confidence:

| Measurement type               | Uncertainty | Unit |
|--------------------------------|-------------|------|
| Tx Radiated test < 1GHz        | $\pm 5.26$  | dB   |
| Tx Radiated test 1GHz - 40 GHz | $\pm 5.19$  | dB   |

# Annex B. Test Results

The herein test results were performed by:

|                       |                |
|-----------------------|----------------|
| Test case measurement | Test Personnel |
| Tx spurious emissions | N.BUI          |

### **B.1.2 Test procedure**

The setup described in Test & System Description section was used to measure the radiated spurious emissions. Depending of the frequency range and bands being tested, different antennas and filters were used. The final measurement is done by varying the antenna height from 1 to 4 meters, the EUT azimuth over 360° and for both Vertical and Horizontal polarizations.

### B.1.3 Test Results

#### B.1.3.1 WCDMA

##### WCDMA 2 - WNC Antenna
