TEST: FIELD STRENGTH OF RADIATED EMISSIONS

Grantee: Taiyo Musen Co., Ltd.

FCC ID: BAA9JKTD-L1620A

Setup:

The equipment under test (EUT) was configured and operated in accordance with the applicable provisions of ANSI C63.4-1992, Section 6, 12. Measurements were made in accordance with applicable paragraphs of Section 8.2.2 and 8.2.3, Section 12.1.1.1 Appendix D, Section 12.1.4 and Appendix H3 and H4 where applicable.

The EUT was placed on a 1 by 1.5 meter table located 40 cm above a 2-meter diameter non-metallic turntable that sits 40 cm above the 15 X 30 meter ground plane at Spectrum's Open Area Test Site. The bi-conical or log-periodic antenna was mounted on a tower spaced at a three meters distance, and arranged for adjustment in height (1-4 meters) and vertical/horizontal polarization to maximize the emissions levels when combined with turntable rotation of the EUT. The dual ridged guide antenna was mounted on a tripod at one-meter height and adjusted for vertical or horizontal antenna orientation. A HP 8562A spectrum analyzer with a HP 8447F, Option H64 amplifier and a HP 83006A pre-amplifier were used for the peak measuring instrumentation.

Discussion:

No modifications were required prior to the final radiated emissions measurements made September 23, 1999 and reported herein.

The EUT is a synthesized triple super-hetrodyne receiver used for automatic direction finding. The receiver operates in the 110 – 170 MHz spectrum. The receiver is designed for installation in a marine vessel and used to receive incoming signals and display direction or relative bearing to the source with respect to the bow of the ship.

The receiver has four modes of operation. Measurements were made in all four modes. In Manual Mode and Spot Mode the receiver was set to operate at 112.00, 140.00, and 168.00 MHz for a low mid and high channel covering the 60 MHz wide band of the receiver.

In Manual Mode, the frequency desired is entered on the front panel, in Spot Mode, the frequency is retrieved from 1 of 30 programmable memory selections but both remain on a single frequency. In Search Mode, the receiver scans a range limited to +/- 500 kHz of the center frequency. The above three frequencies were also used while testing Search Mode of operation. In the Scanning Mode of operation, the receiver can be

Page 1

programmed to scan 3 groups of up to 10 channels per group. During testing we scanned programmed channels spaced across the 60 MHz band of operation.

Preliminary measurements were made as described in Section 8.3.11 and 13.1.4.1 with the receiver operating as described. During preliminary measurements only a few emissions were detected. With the antenna immediately adjacent to the EUT we observed very low levels of emissions from 41.73 MHz up to 1.650 GHz.

None of the low-level emissions observed in close were measurable at 3 meters.

The EUT configuration is detailed in the photographs included with this report.

The final set of measurements was made on September 23, 1999 as specified in Section 8.3.1.2 and 13.1.4.2 were made as specified in Section 13.1.1. The receiver position is detailed in the photographs of the EUT setup submitted herein.

The EUT was 14 VDC powered with an Astron VS-35-M power supply during all of the measurements. RBW and VBW of 100 kHz were used for measurements below 1 GHz. Above 1 GHz peak measurements were made with a RBW and VBW of 1 MHz. We endeavored to maximize levels of the emissions with EUT rotation and adjustment of antenna height.

Measurements were made over the frequency range of 30 - 2000 MHz with **no radiated emissions measurable at three meters**. A HP pre-amplifier was used during the course of these measurements.

No receiver antenna conducted emissions measurements were made. The receiver easily complied with the radiated requirements with the antenna connected.

Conclusion:

The Taiyo Musen Co., Ltd. FCC ID: BAA9JKTD-L1620A, Automatic Direction Finder Receiver when operated and measured as discussed above, meets the receiver radiated spurious emissions requirements under Title 47, CFR Part 15.109(a). This receiver is not subject to the transition provisions of Part 15.37.
