

NC301063

A custom-built metal frame, likely made of aluminum, is mounted on a wooden surface. The frame consists of a base plate and two vertical support pillars. A black rectangular device, possibly a camera or sensor module, is mounted horizontally between the pillars. A multi-colored ribbon cable is connected to the device and extends towards the background. The entire assembly is placed on a worn, light-brown wooden table. In the foreground, a white label with the text 'NC301063' is visible.
