1.CERTIFICATE OF COMPLIANCE

ZACTA TECHNOLOGY CORPORATION
YONEZAWA TESTING CENTER
4149-7 Hachimanpara 5-chome
Yonezawa-shi Yamagata 992-1128 Japan

This device, as described herewith, was tested pursuant to test procedure ANSI C63.4-1992, by Zacta Technology Corporation. The test results are traceable to international or national standard.

COMPANY	: RICOH COMPANY, LTD. 3-2-3, Shin-yokohama, Kohoku-ku, Yokohama-shi, Kanagawa 222-8530 Japan Phone: +81-45-477-1663 Fax: +81-45-477-1649
EUT	: CD-R/RW Drive Unit
FCC ID	: BBP104S
MODEL NAME	: MC104S/RW104S
SERIAL NO.	: K-3

EUT CONDITION : Pre-production
EUT CLASS : B
DATE FOR TEST : December 15, 16, 1999
TEST SITE : Site 2
FCC RULE : FCC Part15 Subpart B, Class B Docket 87-389
REPORT NO. : Z02C-99345
REMARKS : Shielded cables are used in system
TEST RESULTS : Complied

Tested by:

Takuya Osato / EMC Engineer

Authorized by:

Kiyoshi Endo / Manager of Technical Division

The results in this report are applicable only to the samples tested.

This report shall not be re-produced except in full without the written approval of Zacta Technology Corporation.

2.EQUIPMENT DESCRIPTION

EUT	: CD-R/RW Drive Unit
FCC ID	: BBP104S
MODEL NAME	: MC104S/RW104S
MAX FREQUENCY	: 233MHz
POWER	: DC 5V, 12V
PORTS	: SCSI Headphone
EUT SIZE	: (D) 233 X (W) 146 X (H) 41.3 mm
OPERATING MODE	: Read mode Write mode

3.RESULT OF THE MEASUREMENTS

3.-1 RESULTS OF THE MEASUREMENTS

The minimum margin to the limits are as follows:

	Margin	FREQ.	POL[H/V]	Ant. Height	Table deg.	Operating mode
Conduction	-11.7dB	20.010MHz	N/A	N/A	N/A	Write mode (Disk 1)
Radiation	-4.2dB	228.84MHz	H	1.5m	200°	Read mode (Disk 5)

3.-2 DEVIATION FROM THE STANDARD

Not applicable.

4.CONFIGURATION INFORMATION

6. LABORATORY DESCRIPTION

6.-1 DESCRIPTION FOR TEST SITE

1. LOCATION:

ZACTA TECHNOLOGY CORPORATION YONEZAWA TESTING CENTER
4149-7 Hachimanpara 5-chome, Yonezawa-shi Yamagata 992-1128 Japan
Phone: +81-238-28-2880 Fax: +81-238-28-2888

2. THE NUMBER OF SITE:

Site name : Site 1, Site 2, Site 3 and Site 4 - Total 4 sites.

3. THE TYPE OF SITE:

Whether protected site

4. TEST TYPE:

All sites could perform as follows tests:

- 1) 3/10m Radiation test
- 2) Conduction test

5. FACILITY FILING INFORMATION

- 1) FCC FINAL SITE FILING: 2.948 Pursuant to ANSI C63.4-1992

Site name	Final filing date
Site 1, Site 2 and Site 3	January 29, 1997
Site 4	June 18, 1998

*3m/10m Radiation & Conduction testing could be performed on each site

- 2) VCCI FINAL SITE FILING: V-5/97.04 Pursuant to VCCI Regulations for Registration of measurement facilities

Site name	Radiation Registration No.	Conduction Registration No.	Final filing date
Site 1	R-136	C-132	April 1, 1997
Site 2	R-137	C-133	April 1, 1997
Site 3	R-138	C-134	April 1, 1997
Site 4	R-752	C-775	June 23, 1998

- 3) NVLAP ACCREDITATION:

NVLAP CODE: **200306-0**

NVLAP INFORMATION: NVLAP accreditation does not constitute any product endorsement by NVLAP or any agent of the U.S. Government

6.-2 DESCRIPTION OF CONDUCTED EMISSION TESTING

The line-conducted emissions testing facility is located inside of the site which used for radiated emissions testing. A 1 meter x 1.5 meter surface, 0.8 meter height from conducting ground plane wooden table is placed 40 cm away from the vertical conducting surface.

Two $50\ \Omega$ / $50\ \mu\text{H}$ Line Impedance Stabilization Network (LISN) are placed on the conducting ground plane.

The EUT was powered from the KYORITSU LISN and the support equipment were another KYORITSU LISN.

$50\ \Omega$ BNC connector of the KYORITSU LISN for support equipment is terminated in $50\ \Omega$.

An isolation transformer has 50A which is large enough to not affect the peak consumption current by the EUT.

All interconnecting cables more than 1 meter were bundled to 1 meter length.

Sufficient time for the EUT, support equipment, and test equipment were allowed in order for them to warm up to their normal operating condition.

The frequency range was scanned from 450kHz to 30 MHz. The detector function of the test receiver was set to CISPR quasi-peak mode and the bandwidth was set to 10kHz.

The EUT, support equipment and interconnecting cables were arranged and manipulated to maximize worst emissions for each emission in this test report.

6.-3 DESCRIPTION OF RADIATED EMISSION TESTING

Measurements: were made at 3 meter using broadband antenna (Biconical Antenna and log-periodic antenna) & Test receiver. Frequency Range : 30MHz – 1GHz was scanned and investigated using receiver. Six highest emissions(Min.) was reported. The test results represents the worst case emissions for each emission with manipulating the EUT, support equipment and interconnecting cables maximize the worst emissions in this test report.

Condition:

The detector function of the test receiver was set to CISPR Quasi-peak mode and the bandwidth was set to 120kHz. Sufficient time for the EUT, support equipment, and test equipment were allowed in order for them to warm up to their normal operating condition.

The EUT and support equipment were placed on a top of a 0.8 meter height wooden table.

For Floor-Standing devices, the EUT and all cables were installed on electrical insulating material.

The antenna height was varied 1 to 4 meters and stopped at height producing the maximum emission. The turntable was rotated by 360 degrees and stopped at azimuth of producing the maximum emission.

Interconnecting cables, which are connected to a peripheral, was bundled in center, and its length was not exceeding 1 meter. Each emission was maximized by varying the mode of operation.

As specified in CFR section 15.33, in case of the highest frequency used in the device is from 108MHz to 500MHz, the frequency range was investigated from 30MHz up to the frequency 2GHz, when the highest frequency is from 500MHz to 1GHz, up to 5GHz.

For measurements above 1GHz, double-ridged guide antenna was used as specified in ANSI C63.4-1992 section 4.1.5.4. Pursuant to CFR section 15.35(b) and ANSI C63.4-1992 section 4.2., peak and average detectors were used for measurements above 1GHz. The bandwidth of spectrum analyzer was set to 1MHz.

When measuring emissions above 1GHz, the frequencies of maximum emissions were determined by manually positioning the antenna close to the EUT and by moving the antenna over all sides of the EUT while observing a spectral display. The beam width of the antenna at that time was larger than EUT.

6.-4 UNCERTAINTY

CONDUCTION

Total Uncertainty @95%min.Confidence probability	$\pm 1.78\text{dB}$
--	---------------------

RADIATION

Total Uncertainty @95%min.Confidence probability	3m	10m
	$\pm 2.66\text{dB}$	$\pm 2.01\text{dB}$

6.-5 SAMPLE OF FIELD STRENGTH CALCULATION

$$\text{dB } \mu\text{V} = 20\log_{10} (\mu\text{V})$$

$$\text{dB } \mu\text{V/m} = 20\log_{10} (\mu\text{V/m})$$

[Sample Calculation]

*CONDUCTION

@ 3.332MHz : Class B limit = $250 \mu\text{V} = 48.0\text{dB } \mu\text{V}$

Reading = $41.6\text{dB } \mu\text{V}$

Cable Loss + LISN Factor = $0.2 + 0.5 = 0.7\text{dB}$

Total = $41.6 + 0.7 = 42.3\text{dB } \mu\text{V}$

Margin = $42.3 - 48.0 = -5.7\text{dB}$

5.7 dB below the limit

*RADIATION

@ 147.6MHz : Class B limit = $150 \mu\text{V/m} = 43.5\text{dB } \mu\text{V/m}$

Reading = $42.8\text{dB } \mu\text{V}$

Ant. Factor + Cable Loss - Amp. Gain = $14.2 + 3.0 - 30.0 = -12.8\text{dB}$

Total = $42.8 - 12.8 = 30.0\text{dB } \mu\text{V/m}$

Margin = $30.0 - 43.5 = -13.5\text{dB}$

13.5 dB below the limit
